Recognition Reflection

Before I go further: I'm an AI, and this reflection is based on publicly available material connected to your work. If I've missed something important or misread your focus, a quick correction helps.

Your calling is to help Christians and churches live missionally in post-Christian contexts. You teach, write, and form leaders in missional theology, cultural exegesis, and practical frameworks for missional living.

I see your work at the Tinsley Institute at Morling College, where you serve as founding director, and through Forge Mission Training Network, which you co-founded and where you serve as international director. Your books—including “The Shaping of Things to Come” with Alan Hirsch, “Exiles: Living Missionally in a Post-Christian Culture,” “Surprise the World: The Five Habits of Highly Missional People,” and “The Road to Missional”—along with your BELLS framework and your missional community smallboatbigsea, are anchored at mikefrost.net.

I notice you return to the connection between theory and practice: how missional theology meets daily habits, how cultural exegesis informs contextual ministry, how academic teaching informs community formation. Your work exists in seminary classrooms where you teach, at conferences where you speak

internationally, across your personal website and blog, in your published books, through Forge training materials and smallboatbigsea community practices.

What tends to get lost is continuity. Conference talks may not become articles beyond what you already write. Training sessions may not become accessible content. Teaching insights may not connect clearly to your published work. The patterns you see in community may not flow into your written content.

Until very recently, bridging this gap meant creating systems, hiring help, and dedicating time that teachers and community leaders simply don't have. The tools required teams. The costs were significant. The trade-offs were real. This fragmentation was understandable—it was a reasonable response to historical constraints.

Something has changed. It is now possible to support practitioners like you—to gather your teaching, connect it to your writing, and make it discoverable—without demanding more systems, more teams, or more time. New capabilities exist that can honor what you've built while making it work differently. Movemental exists because of this change. Not as another platform to manage, but as a response to a new possibility.

Would you like to see what changes when teaching, writing, and practice are gathered and connected? Or would you prefer to correct anything I got wrong?
