Mission Statement

Youthfront: Bringing youth into a growing relationship with Jesus Christ.

This mission is the organization's core statement of purpose. It sits within a larger vision of a world where everyone belongs and where the church cooperates with God's mission to restore the world through formation, community, and service.

Our Mission & Vision

From a "shared table" meal to neighborhood-designed projects or Missional Journeys, YF Neighborhood's programs are designed to unmake the dividing walls for our neighborhoods. Let's make a world where everyone belongs.

Building Bridges

We all want to help and form friendships across social and economic divisions, but we often don't know where to start. We help you take the first step transforming strangers into neighbors.

Developing Leaders

YF Neighborhood's community programs offer youth a chance to lead by confronting neighborhood challenges and creatively seeking solutions.

Quote from participant: "Enjoyed working alongside members of the Argentine community." — YFN participant

Why I Love Dead Ends

What magic happens when we get stuck? YFN's Kurt Rietema describes what happens when a group of young social entrepreneurs hit the wall (YF Neighborhood blog).

Source: Mission & Vision — youthfront.com (<https://youthfront.com/our-work/mission-vision/>)

Vision Statement

Let's make a world where everyone belongs.

Youthfront's vision extends beyond individual faith to a restored, unified human community. YF Neighborhood's programs are designed to unmake the dividing walls for our neighborhoods. Youth and families form friendships across social and economic divisions; learning experiences imagine a world without walls.

This work is framed as mending the divisions and healing the hurt in a broken world—at the heart of God's mission and Youthfront's calling. Neighborhoods where strangers become neighbors, camp and family ministries oriented toward belonging, connection, and Christian formation as part of God's restorative work.

Values & Guiding Principles

Youthfront is a community committed to creating holistic, missional environments for Christian formation. These values function as strategic priorities and guide ministry practice.

Core Values

COMMUNITY — Recognizing God's design for humans to be in community, we strive to build meaningful relationships of belonging, sharing life together. We believe mending divisions and healing the hurt in a broken world is at the heart of God's mission and our calling as Christians.

TRUST — We nurture a culture of trust based on interpersonal values that guide us toward a healthy community.

THEOLOGICAL REFLECTION — We thoughtfully engage with the complexity of ministry and life at the intersection of Divine and human action.

PLAYFULNESS — We delight in creating and participating in play together, receiving it as a gift from God.

CHRISTIAN FORMATION, PRAYER AND MINISTRY — We pursue the life of Jesus Christ through intentional Christian practices, including prayer as foundational practice. We strive to bear witness to the Good News through our words, actions, and service.

Practices That Embody Our Values

- A Way of Prayer: Our number one priority is to abide in God. Prayer is not just something we do, but a Person we are with. We practice midday prayer together; we begin meetings acknowledging God's presence.
- A Way of Community: The way we love one another is a sign and foretaste of the Kingdom of God and a witness to the world. We gather to play, share stories, eat, and experience God together.
- A Way of Ministry: We create space for others' stories and strive to serve from true empathy and love instead of from a position of superiority. We learn from the other and read the Bible over and against ourselves to understand the heart of God.

Vision, Intention, and Means

Youthfront (YouthFront, Inc.) — Kansas City area. This document summarizes the organization's vision, intention, and means as reflected in official materials and public records.

Vision

Youthfront's stated mission is "Bringing youth into a growing relationship with Jesus Christ."^{[1](#fn1)} That mission sits within a larger vision: "Let's make a world where everyone belongs." YF Neighborhood's programs are "designed to unmake the dividing walls for our neighborhoods."^{[2](#fn2)} Our Work states that YF Neighborhood offers "learning experiences to imagine a world without walls" and that youth and families "form friendships across social and economic divisions."^{[3](#fn3)}

In Our Story this is framed theologically: at Pentecost God gathered those "estranged by the dividing walls of ethnicity, language, religion, gender, and class to create one new humanity out of the many." Youthfront believes "this work of mending the divisions and healing the hurt in a broken world is at the heart of God's mission and our calling as Christians in this world."^{[1](#fn1)}

Their vision is not only individual faith but a restored, unified human community—neighborhoods where strangers become neighbors, youth and families connect across divisions, and the church cooperates with God's mission to restore the world. Camp, neighborhood, and family ministries are all oriented toward that story: belonging, connection, and Christian formation as part of God's restorative work.

More detail: Our Story (<https://youthfront.com/our-story/>) · Mission & Vision (<https://youthfront.com/our-work/mission-vision/>) · Our Work (<https://youthfront.com/our-work/>)

Intention

Youthfront's intention—what they believe must happen to get there—centers on environment, formation, and partnership.

- Holistic, missional environments: They are "committed to creating holistic, missional environments for Christian formation." Transformation is the work of the Holy Spirit, "not a formula that we enact"; they "intentionally create environments of space, time, dialogue, hospitality and community" so that children and youth can "discover, explore and experience God."^{[1](#fn1)}

- Church-assisting, not replacing: They describe themselves as a church-assisting organization. Their "camps, programs, training, resources, experiences and other ministry initiatives are intentionally designed to assist in contextualizing the good news of Jesus Christ" and to cooperate "fully with the Mission of God."^{[1](#fn1)}^{[4](#fn4)}

- Formation as lifelong journey: They believe "evangelism and discipleship are a process of one's life-long spiritual journey" and are "devoted to the calling, inspiring and equipping of ministry leaders, children, youth and families toward the pursuit of becoming like Jesus Christ" through the Holy Spirit, Scripture, the Church community, prayer, and other spiritual practices.^{[1](#fn1)} Our History adds a "holistic view of the person" and "a view of discipleship as a life-long journey we take alongside each other, in communities of equality, mutuality and reciprocity."^{[5](#fn5)}

- Values as strategy: Their values—Community, Trust, Theological Reflection, Playfulness, Christian Formation, Prayer and Ministry—function as strategic priorities: "mending divisions and healing the hurt in a broken world" at the heart of God's mission and their calling; prayer as "a Person we are with" and "number one priority is to abide in God"; loving one another as "a sign and foretaste of the Kingdom of God and a witness to the world." Their "Way of Ministry" emphasizes learning from the other, creating space for others' stories, and serving from "true empathy and love instead of from a position of superiority."^{[1](#fn1)}

So the intention is: create formative environments, assist the church, treat formation as lifelong, and live out these values in

prayer, community, and ministry practice.

<div class="section-detail">More detail: Our Story (<https://youthfront.com/our-story/>) · Our History (<https://youthfront.com/our-story/our-history/>)</div>

Means

How Youthfront operates—programs, structure, and accountability.

- YF Camp: Two camp properties: Circle C (1970, later Camp West) and L-Bar-C (1982, later Camp LaCygne); more than 1,000 acres of camp property.^{5} Overnight and day camps for grades 1–12. Camp is structured as a “theological playground” for contemplation and communion: “rhythm of morning, midday and evening prayer”; adults trained to “engage kids in conversations that foster wonder and encourage curiosity”; “Scripture is read with imagination, doubts are embraced and exploration is encouraged.” “Children and youth are seen as ministers, called to participate in God’s ministry in the world.” Scale: more than 6,000 youth and families a year and interacts with and provides training to more than 200 churches a year; frequently inviting in theological scholars.^{5}^{6} Program structure includes Day Camp, Kids Camp, Middle School Camp, Combined MS/HS, Retreats & Rentals.

- YF Neighborhood: Framed as “making strangers into neighbors.”^{3} “Shared table” meals, neighborhood-designed projects, Missional Journeys; programs “intentionally designed to cross the boundaries that divide us.”^{5} Something To Eat™: meal-packaging and food distribution; partnership with Harvesters; city-wide packing events; monthly food distribution at Franklin Center, KCK, for more than 350 households.^{7} ImagineX: social entrepreneurship for middle school students; Snack Shack KC in Argentine—“founded by the first group of ImagineX students” as a “safe, afterschool hangout.”^{8} The Commons: meeting and rental space in Argentine, KCK (multi-purpose room for 120, kitchen, dining).^{8} Year-round programs including summer Day Camp and Argentine pop-up Christmas Store. Partners: “Individuals, families, youth groups, church groups, schools and businesses.”^{5}^{6}

- YF Family: “Support and resources for parents, grandparents and families.” Presence-Centered Counseling (in-house affiliate): therapy for families, youth, adults, couples, play therapy for young children.^{5} Programs include Arise (juvenile justice), Teen Parent Connect, parenting resources, events and courses.

- Structure and accountability: Founded 1943 as Kansas City Youth for Christ; later independent from YFC; name changed to Youthfront in the late 1990s.^{1}^{5} 501(c)(3); EIN 48-6088974; address 4600 Rainbow Blvd, Kansas City, KS 66103; fiscal year end August 31.^{9} ECFA member since May 2, 1990; American Camping Association accreditation since 2007.^{9} Board: 8 members; Form 990: Tim Smith (Chair), Cheryl Reinhardt (Vice Chair); principal officer Mike King (CEO/President).^{10} Leadership includes CEO Mike King, COO Natasha Nikkel, VP Development & Marketing Lisen Tammeus Mann, VP Ministries Jim Newberry, EVP Strategic Initiatives Topher Philgreen, and board members.^{11} Revenue and expenses (e.g. FY Aug. 2024 revenue \$5,630,985, expenses \$4,935,796; FY Aug. 2025 revenue \$4,865,857, expenses \$5,290,353).^{10}

Our Story

While we may be best known for our youth ministry leadership and nationally renowned camps, at Youthfront we're proud to offer a range of innovative programs for youth, families and churches. We're committed to helping youth build faith, friendships and leadership — and to providing support for families, churches and youth ministry workers. Learn more about our staff's values and why we love what we do!

Our Mission

Bringing youth into a growing relationship with Jesus Christ.

Our Declaration of Faith

The Apostles' Creed:

I believe in God, the Father almighty, creator of heaven and earth.

I believe in Jesus Christ, his only Son, our Lord who was conceived by the power of the Holy Spirit and born of the Virgin Mary. He suffered under Pontius Pilate, was crucified, died, and was buried; he descended to the dead. On the third day he rose again. He ascended into heaven and is seated at the right hand of the Father. He will come again to judge the living and the dead.

I believe in the Holy Spirit, the holy universal church, the communion of saints, the forgiveness of sins, the resurrection of the body, and the life everlasting. Amen.

Our Values

Youthfront is a community committed to creating holistic, missional environments for Christian formation.

COMMUNITY — Recognizing God's design for humans to be in community, we strive to build meaningful relationships of belonging, sharing life together. We believe mending divisions and healing the hurt in a broken world is at the heart of God's mission and our calling as Christians.

TRUST — We nurture a culture of trust based on interpersonal values that guide us toward a healthy community.

THEOLOGICAL REFLECTION — We thoughtfully engage with the complexity of ministry and life at the intersection of Divine and human action.

PLAYFULNESS — We delight in creating and participating in play together, receiving it as a gift from God.

CHRISTIAN FORMATION, PRAYER AND MINISTRY — We pursue the life of Jesus Christ through intentional Christian practices, including prayer as foundational practice. We strive to bear witness to the Good News through our words, actions, and service.

Our Approach

Youthfront is committed to helping youth workers and students develop their entire being. As the Church seeks to find ways to cooperate with God's mission to restore the world, Youthfront is passionately committed to assisting in this endeavor.

A church-assisting organization, Youthfront's camps, programs, training, resources, experiences and other ministry initiatives are intentionally designed to assist in contextualizing the good news of Jesus Christ. We strive to be creative ministry leaders who engage in theology, ministry, formation, practice, relationships, service and life with a prophetic imagination that cooperates fully with the Mission of God.

Youthfront is committed to nurturing environments for children and youth to encounter God in a transformational way. While we know that transformation is the work of the Holy Spirit and not a formula that we enact, we will intentionally create environments of space, time, dialogue, hospitality and community. The environments that Youthfront creates are intended to help children and youth discover, explore and experience God.

When the Spirit came on Pentecost, God enacted a desire for intimacy with all people gathering together God's long-lost children who had been estranged by the dividing walls of ethnicity, language, religion, gender, and class to create one new humanity out of the many. At Youthfront, we believe that this work of mending the divisions and healing the hurt in a broken world, is at the heart of God's mission and our calling as Christians in this world.

We are committed to helping ministry leaders, churches, parents and young people embrace the essential elements of the Christian faith. We believe that evangelism and discipleship are a process of one's life-long spiritual journey. We are devoted to the calling, inspiring and equipping of ministry leaders, children, youth and families toward the pursuit of becoming like Jesus Christ through the work of the Holy Spirit, Scripture, the Church community, prayer and other spiritual practices.

A Way of Prayer

We believe God is always preceding. Our number one priority is to abide in God. Prayer is not just something we do, but a Person we are with.

1. We go on spiritual retreat at least once a year.
2. We begin meetings acknowledging God's presence and attempt to join the Holy Spirit in God's Mission.
3. We practice Midday prayer together Monday through Friday.

A Way of Community

We are committed to loving and caring for one another. We believe the way we love one another is a sign and foretaste of the Kingdom of God and a witness to the world.

1. We get away for an annual staff retreat.
2. We gather together monthly to play, laugh, share stories, eat, drink and experience God together through a variety of spiritual practices.
3. We seek to love and honor one another by following our interpersonal values.
4. We encourage one another to share lunch together in the staff commons.
5. We start our week off together in prayer, storytelling and scripture reading.

A Way of Ministry

We are committed to bearing witness to the great Good News of Jesus Christ in our words and actions. We want to make room for others that they may experience the reality of Jesus in our midst.

1. We participate in staff training opportunities that help us learn what it means to follow God in the way of Jesus Christ, who came not to be served but to serve and pour out his life for others.
2. We endeavor to serve and minister to others by learning from the other, reading their perspectives and reading the Bible over and against ourselves in order to understand the heart of God.
3. We create space for those we serve to tell their story, as we strive to have our ministry/service to the other come from a place of true empathy and love instead of from a position of superiority.
4. We engage in the practice of silence and discernment in the context of thinking about, reflecting and planning our service and ministry efforts.
5. We engage in times of intentional theological reflection concerning our ministry service and allow our ministry/service to inform our theological reflection.

Eight decades of youth ministry

Youthfront was originally founded in 1943 and soon after became Kansas City Youth for Christ as the Kansas City chapter of the national Youth for Christ organization. In the late '60's we became independent from YFC. In the late '90's our name changed to Youthfront and has served thousands of churches, youth and families through its camp, neighborhood, meal packing and other programs.

Our History

Eight decades of youth ministry

Birthered in 1943, Youthfront was originally connected to the national Youth for Christ organization as Kansas City Youth for Christ. It was founded and led for many years by Al and Vidy Metsker. In the KCYFC ministry's first decades, it focused on large rallies and worship events for thousands of students at its auditorium and opened two youth camps, Circle C in 1970 (which would become Camp West) and L-Bar-C in 1982 (which would become Camp LaCygne).

In the 1990s, KCYFC transitioned to become Youthfront and moved from a parachurch model to a church assisting organization, while continuing to directly serve more than 5,000 young people and families through its local camps each summer. Centering on the foundational practices of prayer, community and service, Youthfront nurtures environments for congregations and young people to discover, explore and experience God.

At the end of the 1990s, Youthfront's camp emphasis broadened to assisting, resourcing and expanding a network of partnerships with congregations, and training church youth workers, children's ministers and pastors. With more than 1,000 acres of camp property, Youthfront provides programming and ministry to more than 6,000 youth and families a year, and interacts with and provides training to more than 200 churches a year, frequently inviting in theological scholars to help us learn and grow.

Youthfront's mission has been expanding since the early 2000s to include a broader focus on children and parents, grandparents and families. YF Camp now offers overnight and day camps for kids first through 12th grade. Rather than structuring camp around a topical methodology, YF Camp curates a theological playground for contemplation and communion as a safe place for young people to seek and explore. Camp is shaped around a rhythm of morning, midday and evening prayer. Adults – from paid staff to volunteer cabin leaders – are trained to engage kids in conversations that foster wonder and encourage curiosity. Scripture is read with imagination, doubts are embraced and exploration is encouraged. Children and youth are seen as ministers, called to participate in God's ministry in the world.

With YF Neighborhood, young people and families have the opportunity to form friendships across social and economic divisions by leaving familiar neighborhoods to meet new neighbors different from themselves. YF Neighborhood offers hands-on ways to make life better for all our neighbors and learning experiences to imagine a world without walls. From a "shared table" meal to neighborhood-designed projects or Missional Journeys, YF Neighborhood's programs are intentionally designed to cross the boundaries that divide us, and remind us of our fundamental connection to each other as human beings loved by God. Individuals, families, youth groups, church groups, schools and businesses partner through YF Neighborhood in unique experiences that transform strangers into neighbors.

Joining YF Camp and YF Neighborhood, Youthfront's newest ministry area, YF Family, provides support and resources for parents, grandparents and families. Youthfront's in-house affiliate, Presence-Centered Counseling, is housed here, offering therapy for families, youth, adults and couples, as well as play therapy for young children. Youthfront is committed to a holistic view of the person, a deep understanding of our calling to participate in God's restorative work in the world, and a view of discipleship as a life-long journey we take alongside each other, in communities of equality, mutuality and reciprocity. This is lived out in YF Camp, YF Neighborhood and YF Family.

Positioning & Differentiators

Youthfront's positioning in the Kansas City region and beyond is defined by how they describe their role, geography, and approach.

Church-Assisting, Not Replacing

Youthfront describes itself as a church-assisting organization. Camps, programs, training, resources, and ministry initiatives are intentionally designed to assist in contextualizing the good news of Jesus Christ and to cooperate fully with the Mission of God. They do not replace the local church; they resource and partner with congregations.

Three Ministry Areas

- YF Camp — More than 1,000 acres; overnight and day camps for grades 1–12; theological playground for contemplation and communion; training and partnership with more than 200 churches a year; over 6,000 youth and families annually.
- YF Neighborhood — Making strangers into neighbors; shared table, neighborhood-designed projects, Missional Journeys; Something To Eat (food distribution); ImagineX, Snack Shack KC, The Commons; Argentine, KCK presence; partners include individuals, families, youth groups, churches, schools, and businesses.
- YF Family — Support and resources for parents, grandparents, and families; Presence-Centered Counseling; Arise (juvenile justice), Teen Parent Connect, parenting resources, events, and courses.

Geographic & Institutional Focus

- Primary geography: Kansas City metro; camp properties and neighborhood work in the region; Argentine (KCK) as a key neighborhood footprint.
- Accreditation: ECFA member since 1990; American Camping Association accreditation since 2007.
- Founded 1943 as Kansas City Youth for Christ; independent from YFC; name changed to Youthfront in the late 1990s.

Case for Support

Why give to Youthfront? A single narrative for fundraising and donor conversations.

The need

Young people and families need environments where they can discover, explore, and experience God—and where strangers become neighbors across social and economic divisions. Churches and ministry leaders need partners who create space for formation, prayer, and service without replacing the local church.

Our approach

Youthfront is a church-assisting organization with more than eight decades of youth ministry in the Kansas City region. We bring together:

- YF Camp — More than 1,000 acres, overnight and day camps for grades 1–12; a theological playground for contemplation and communion; training and partnership with more than 200 churches a year.
- YF Neighborhood — Shared table, neighborhood-designed projects, Missional Journeys; Something To Eat (meal packing and monthly food distribution for 350+ households); ImagineX, Snack Shack KC, The Commons in Argentine, KCK.
- YF Family — Support for parents, grandparents, and families; Presence-Centered Counseling; Arise (juvenile justice), Teen Parent Connect, parenting resources, and formation.

We create holistic, missional environments for Christian formation and cooperate fully with the Mission of God.

Impact (from public materials)

- More than 6,000 youth and families served through camp and programs each year.
- More than 200 churches trained and resourced annually.
- 350+ households receiving monthly food distribution through Something To Eat (Franklin Center, KCK).
- ECFA member since 1990; American Camping Association accredited since 2007.

The ask

Support Youthfront so we can continue to bring youth into a growing relationship with Jesus Christ, unmake the dividing walls in our neighborhoods, and help the church participate in God's restorative work in the world.

Strategic Plan (Draft)

Draft inferred from public materials (vision, intention, means, and program descriptions). For board/staff review and adoption; not an approved strategic plan.

Purpose

This document summarizes goals and priorities that can be inferred from Youthfront's stated vision, intention, means, and programs. It is intended to support internal planning and alignment, not to replace a board-approved strategic plan.

Inferred strategic goals

1. Deepen Christian formation — Create and sustain holistic, missional environments where children, youth, and families discover, explore, and experience God; formation as a life-long journey.
2. Strengthen church partnership — Assist and resource congregations; train youth workers, children's ministers, and pastors; maintain relationships with more than 200 churches a year.
3. Unmake dividing walls — Through YF Neighborhood, foster friendships across social and economic divisions; transform strangers into neighbors; support local impact (Something To Eat, ImagineX, Snack Shack KC, The Commons).
4. Support families — Expand YF Family offerings: counseling, Arise, Teen Parent Connect, parenting resources, and formation.
5. Steward camp and place — Maintain and use more than 1,000 acres of camp property; serve more than 6,000 youth and families annually through camp and related programs.
6. Operate with accountability — Maintain ECFA membership, ACA accreditation, and sound governance; align spending with mission (program services as majority of expenses).

Inferred priorities (from values and narrative)

- Prayer and abiding in God as first priority.
- Community and loving one another as sign of the Kingdom.
- Ministry from empathy and learning from the other (not superiority).
- Theological reflection integrated with ministry practice.

VIM (this dashboard) · Governance — VIM & History

Form 990 / MinistryWatch · Program vs. management vs. fundraising expense allocation

Theory of Change (Draft)

Draft inferred from public materials. For board/staff review and refinement.

Draft logic model

Stage · What we infer from public materials

----- · -----

Inputs · Staff, volunteers, camp properties (1,000+ acres), neighborhood presence (e.g. Argentine), partnerships (churches, Harvesters, schools, businesses), donor support, curriculum and theological formation practices.

Activities · Camp programs (overnight/day, prayer rhythm, theological playground); YF Neighborhood (shared table, Missional Journeys, Something To Eat, ImagineX, Snack Shack KC, The Commons); YF Family (counseling, Arise, Teen Parent Connect, parenting resources); training and resourcing of 200+ churches; formation environments (space, time, dialogue, hospitality, community).

Outputs · Youth and families served (6,000+ annually); churches trained/resourced (200+); meals packed and distributed (e.g. 350+ households monthly at Franklin Center); camp and neighborhood program participation; counseling and family program participation.

Outcomes · Youth and families in growing relationship with Jesus Christ; friendships across divisions; strangers becoming neighbors; ministry leaders and churches better equipped; families supported; neighborhoods experiencing tangible impact (food, place, leadership).

Impact · A world where everyone belongs; dividing walls unmade; church cooperating with God's mission to restore the world.

Assumptions (stated or inferred)

- Transformation is the work of the Holy Spirit; environments can be created but not “enacted” as a formula.
- Church-assisting role is effective when congregations are resourced and partnered, not replaced.
- Formation is life-long; evangelism and discipleship are process, not one-time events.
- Crossing boundaries (neighborhood, camp, family) creates belonging and witness.

MinistryWatch (2023) · Youthfront camps serve 3,000 in Kansas

Donor Personas

Six archetypal donors derived from Youthfront's board composition, program mix, regional landscape, and organizational values. Use these personas to guide messaging, cultivation strategy, event design, and ask calibration.

How These Personas Were Developed

Each persona is a composite drawn from:

- Board of directors — The current board (FY 2025) reflects the types of people already invested in Youthfront. Board members are both donors and attractors of similar donors.
- Program participants and partners — Camp families, church partners, Something To Eat volunteers, and counseling clients represent the warmest donor pipeline.
- KC regional prospect data — The Master Prospect List (50 prospects, Tier 1–3) reveals wealth patterns, professional profiles, and philanthropic behaviors in the KC metro.
- Organizational values — Youthfront's identity as church-assisting, formation-centered, and community-oriented shapes who resonates with the mission.

Personas are not mutually exclusive. A single donor may exhibit traits from multiple personas. The primary use is to match messaging and cultivation tactics to the dominant persona of each prospect or donor.

Persona 1: The Camp Family Champion

"Camp changed my kid's life. I want every family to have that."

Profile

Attribute · Detail

----- · -----

Age · 38–55

Household income · \$120K–\$350K

Geography · Johnson County KS (Overland Park, Leawood, Olathe) or south KC metro

Family · Married; 2–3 children (elementary through high school)

Faith · Active in a mainline or evangelical church; children attend youth group

Connection to YF · Child attended YF Camp; family may have attended a retreat; registered through church partnership

Giving range · \$500–\$5,000/year

Giving trigger · Camp registration season; end-of-summer impact stories; "send a kid to camp" scholarship appeals

What Motivates Them

- Tangible, personal impact: "My daughter came home different"
- Community and belonging for their children
- Outdoor, unplugged experiences in a screen-saturated world
- Trust in the camp's theology and safety (ACA accreditation, ECFA membership)

How to Cultivate

- Entry point: Camp registration and post-camp follow-up
- Upgrade path: Invite to camp family dinner or open house !' scholarship fund appeal !' annual fund !' camp capital campaign
- Messaging tone: Personal stories, photos from camp, child's growth narrative
- Ask cadence: 2–3 touches/year (post-camp thank-you, year-end appeal, spring scholarship ask)
- Stewardship: Handwritten thank-you from camp director; impact update showing how many kids attended on scholarship

Board Proxy

This persona maps to board members whose engagement likely began through family or church connections to camp programming.

Persona 2: The Church Partner Pastor

Youthfront does what we can't do alone — and they do it with theological integrity.

Profile

Attribute · Detail

----- · -----

Age · 35–60

Household income · \$65K–\$150K (pastoral salary)

Geography · KC metro (any county); church may be urban, suburban, or exurban

Family · Married; may have children in YF programs

Faith · Ordained or lay church leader; theologically reflective; values formation over transaction

Connection to YF · Church is a YF partner (one of 200+ annually); has sent youth groups to camp; may use YF training resources

Giving range · \$100–\$2,000/year (personal); church may give \$1,000–\$10,000

Giving trigger · Church partnership renewal; Missional Journey participation; Something To Eat packing event

What Motivates Them

- Youthfront's "church-assisting, not replacing" posture
- Theological depth (Andrew Root, VIM framework, contemplative practices)
- Practical partnership: camp, training, neighborhood ministry
- Shared mission vocabulary: formation, prayer, community, witness

How to Cultivate

- Entry point: Church partnership onboarding; pastor lunch or learning lab
- Upgrade path: Pastor !' church budget line item for YF !' personal giving !' board ambassador or connector
- Messaging tone: Theological, mission-centered; reference VIM, formation, and prayer
- Ask cadence: 1–2 personal touches/year + church partnership communications
- Stewardship: Invitation to staff theologian events; early access to ministry resources; recognition at partner appreciation events

Board Proxy

Mike King (D.Min., CEO) and the organization's theological identity attract this persona. Ed Garlich (board + development staff) represents the insider-pastor bridge.

Persona 3: The KC Philanthropist

"I invest in Kansas City. Show me the impact and the accountability."

Profile

Attribute · Detail

----- · -----

Age · 50–70

Household income · \$500K+ (or \$5M+ net worth)

Geography · Mission Hills, Leawood, Prairie Village, or south KC metro

Family · Grown children; may have grandchildren; spouse active in civic/philanthropic circles

Faith · May be Christian (moderate/mainline) or culturally religious; faith is not the primary giving motivator — impact is

Connection to YF · Heard of Youthfront through social networks, KCBJ, or another board member; may have no direct program connection

Giving range · \$10,000–\$100,000+ (major gift)

Giving trigger · Impact data, financial transparency (990, ECFA), invitation from a peer, capital campaign, named giving opportunity

What Motivates Them

- Measurable community impact: "6,000 youth and families" and "350+ households fed monthly"
- Organizational credibility: ECFA since 1990, ACA accreditation, audited financials
- Peer validation: "Who else is giving? Who's on the board?"
- Legacy and recognition (tasteful, not ostentatious): named campership fund, founding donor of a program
- Efficient use of funds: 82% program expense ratio

How to Cultivate

- Entry point: Peer introduction from board member or existing major donor; KCBJ or Ingram's event
- Upgrade path: Tour of camp or Argentine site !' first gift (\$5K–\$10K) !' major donor dinner !' annual major gift !' planned giving conversation
- Messaging tone: Data-driven, professional, outcomes-focused; include financials and efficiency ratios
- Ask cadence: 2–4 high-touch contacts/year (personal visit, phone call, exclusive event, impact report)
- Stewardship: Personal call from CEO; annual impact report with their gift's specific outcomes; invitation to board-hosted events

Board Proxy

Tim Smith (Board Chair) and Cheryl Reinhardt (Vice Chair) represent this persona. The Master Prospect List Tier 1 (Mallouk, Illig, Kauffman, Hunt, etc.) are the aspirational version.

Persona 4: The Neighborhood Builder

"I care about Argentine and KCK. This is real, boots-on-the-ground work."

Profile

Attribute · Detail

----- · -----

Age · 30–55

Household income · \$60K–\$200K

Geography · Wyandotte County KS (KCK, Argentine) or urban KC metro

Family · May be single, married, or single-parent; children may participate in YF Neighborhood programs

Faith · Christian (often from neighborhood churches); faith expressed through justice and service

Connection to YF · Volunteers at Something To Eat; child in ImagineX or Snack Shack KC; attends Service Saturdays; uses The Commons

Giving range · \$50–\$2,000/year

Giving trigger · Something To Eat events; Argentine Christmas Store; neighborhood stories; Giving Tuesday

What Motivates Them

- Tangible, local impact they can see and touch
- Food security: "350+ households fed every month"
- Youth empowerment: ImagineX social entrepreneurship, Snack Shack KC founded by students
- Belonging and bridge-building: "strangers becoming neighbors"
- Low barrier to entry: volunteer first, give later

How to Cultivate

- Entry point: Something To Eat packing event; Service Saturday; Argentine Christmas Store
- Upgrade path: Volunteer !' first gift (Giving Tuesday, small online gift) !' monthly donor !' mid-level annual gift !' neighborhood program champion
- Messaging tone: Stories from the neighborhood; photos of real people and places; emphasize dignity and partnership, not charity
- Ask cadence: Monthly e-newsletter + 2 specific appeals/year (Giving Tuesday, summer)
- Stewardship: Thank-you from neighborhood program director; invitation to community meals; recognition in Something To Eat communications

Board Proxy

Ed Garlich (Development Associate, Creative Giving — dual board/staff) and the organization's Argentine presence ground this persona.

Persona 5: The Legacy Steward

"I've been giving to Youthfront since before it was called Youthfront."

Profile

Attribute · Detail

----- · -----

Age · 60–80+

Household income · \$100K–\$500K (often retired; wealth in assets, not income)

Geography · KC metro (any area); may have relocated but maintains KC ties

Family · Grown children; grandchildren may attend camp; multi-generational connection to the organization

Faith · Deep, long-held Christian faith; remembers Kansas City Youth for Christ era (pre-1998 name change)

Connection to YF · 10–40+ year giving history; may have attended camp as a child; knows Al and Vidy Metsker legacy; has watched the organization evolve

Giving range · \$1,000–\$25,000/year; planned giving potential of \$50K–\$500K+ (estate, IRA rollover, charitable trust)

Giving trigger · History and legacy stories; founder tributes; planned giving conversations; milestone anniversaries

What Motivates Them

- Institutional loyalty and personal history
- Desire to see Youthfront endure for the next generation
- Stewardship theology: "What I have is not mine; it's God's"
- Trust built over decades of relationship with staff and leadership
- Legacy: their name or family name associated with enduring impact

How to Cultivate

- Entry point: Already in the database; reactivation or upgrade conversation
- Upgrade path: Annual gift !' major gift !' planned giving (bequest, IRA charitable rollover, donor-advised fund, charitable remainder trust)
- Messaging tone: Honor their history; reference organizational milestones; use language of stewardship and legacy
- Ask cadence: 2–3 personal touches/year (handwritten note from CEO, phone call, legacy society invitation)
- Stewardship: Legacy society membership; recognition in annual report; personal visit from VP Development; invitation to camp for grandchildren

Board Proxy

The organization's 80+ year history (founded 1943) and the Metsker legacy create this donor archetype. Board members with long tenure and deep institutional knowledge embody this persona.

Persona 6: The Corporate/Foundation Connector

""Our company wants to invest in youth and community. What's the partnership look like?""

Profile

Attribute · Detail

----- · -----

Age · 35–60 (decision-maker at firm or foundation)

Entity type · Corporation (CSR/community investment), private foundation, donor-advised fund, family office

Geography · KC metro HQ or regional office

Sector · Financial services, healthcare, technology, real estate, professional services, food/agriculture

Connection to YF · Employee volunteered at Something To Eat; executive's child attended camp; foundation's focus area overlaps (youth, food security, faith-based, KC community)

Giving range · \$5,000–\$250,000+ (corporate sponsorship, foundation grant, matching gift program)

Giving trigger · Employee engagement opportunity; sponsorship proposal; grant cycle alignment; board member introduction

What Motivates Them

- Employee engagement and team-building (Something To Eat packing events are ideal)
- Brand alignment with youth, community, and KC identity
- Measurable outcomes for CSR reporting
- Foundation program-area fit (youth development, food security, family services, faith-based organizations)
- Relationship with a board member or executive who makes the introduction

How to Cultivate

- Entry point: Employee volunteer day at Something To Eat or camp; KCBJ networking event; board member introduction
- Upgrade path: Volunteer event !' event sponsorship !' annual corporate gift !' multi-year partnership !' named program sponsor
- Messaging tone: Professional, impact-oriented, partnership language; include program metrics, logos, and co-branding opportunities
- Ask cadence: Quarterly touchpoints (impact updates, volunteer scheduling, sponsorship renewal)
- Stewardship: Annual impact report branded for the partner; logo recognition; employee volunteer day coordination; executive briefing with CEO

Board Proxy

The Master Prospect List's corporate executives (Mallouk/Creative Planning, Illig/Cerner, Kemper/Commerce Bancshares, Aron/AMC) and the KC power network clusters represent this persona at scale.

Persona Summary Matrix

Persona · Entry Point · Typical Gift · Upgrade Ceiling · Key Message · Cultivation Priority

----- · ----- · ----- · ----- · ----- · -----

1. Camp Family Champion · Camp registration · \$500–\$5K · \$10K–\$25K · "Your child's transformation" · High volume, moderate value
2. Church Partner Pastor · Church partnership · \$100–\$2K (personal) · \$5K + church budget · "We assist, not replace" · Connector value > gift value
3. KC Philanthropist · Peer introduction · \$10K–\$100K+ · \$250K+ / planned · "Accountability + impact" · Highest individual value
4. Neighborhood Builder · Volunteer event · \$50–\$2K · \$5K–\$10K · "Real change, right here" · Volume + community authenticity
5. Legacy Steward · Already in database · \$1K–\$25K · \$50K–\$500K+ (planned) · "Your legacy endures" · Highest lifetime value

6. Corporate/Foundation · Board introduction · \$5K–\$250K+ · Multi-year partnership · "Partnership + impact metrics" · Highest single-gift potential

Using Personas in Practice

Prospect Qualification

When evaluating a new prospect, ask: *Which persona does this person most resemble?* Then apply the cultivation playbook for that persona.

Appeal Segmentation

Segment your mailing/email list by dominant persona. Tailor the subject line, lead story, and ask amount to the persona's motivations and giving range.

Event Design

Design events to attract specific personas:

- Camp open house !' Persona 1 (Camp Family) and Persona 5 (Legacy Steward)
- Something To Eat packing event !' Persona 4 (Neighborhood Builder) and Persona 6 (Corporate Connector)
- Major donor dinner with CEO !' Persona 3 (KC Philanthropist) and Persona 6 (Corporate Connector)
- Pastor appreciation lunch !' Persona 2 (Church Partner Pastor)

Board Recruitment

Seek board candidates who embody Personas 3 (KC Philanthropist), 5 (Legacy Steward), or 6 (Corporate Connector) — these personas bring both capacity and network access that amplify fundraising.

Scoring Integration

Each persona maps to the Donor Scoring Rubric (see *Donor Scoring Rubric*). The rubric quantifies the qualitative attributes described here into a 0–100 score.

Donor Segmentation Framework

How to divide the donor file into actionable segments for communications, appeals, events, and reporting. Integrates the Donor Scoring Rubric, Donor Personas, and Expected Value model into a practical segmentation system.

Why Segment?

A single donor file contains people with radically different motivations, capacities, and relationship depths. Sending the same message to everyone wastes resources and erodes trust. Segmentation ensures:

- The right message reaches the right person — a \$50K prospect doesn't receive a Giving Tuesday \$25 ask
- Development staff time is allocated to the highest-ROI relationships
- Retention improves — donors who feel seen and understood give more and give longer
- Reporting is clearer — board and leadership see the donor file as a portfolio, not a list

The Three Segmentation Axes

Every donor is segmented along three axes simultaneously. The intersection of these axes determines the communication strategy.

Axis 1: Score Band (from Donor Scoring Rubric)

Band · Score · Primary Action

----- · ----- · -----

Platinum · 90–100 · Personal stewardship

Gold · 75–89 · Major gift cultivation

Silver · 60–74 · Mid-level cultivation

Bronze · 45–59 · Annual fund + events

Developing · 30–44 · Research + light touch

Watch · 15–29 · Mass communication

Inactive · 0–14 · Archive

Axis 2: Persona (from Donor Personas)

Persona · Primary Program Affinity · Messaging Theme

----- · ----- · -----

1. Camp Family Champion · YF Camp · Transformation, outdoor formation, scholarship

2. Church Partner Pastor · Church partnerships · Church-assisting, theology, training

3. KC Philanthropist · Organization-wide · Impact data, accountability, legacy

4. Neighborhood Builder · YF Neighborhood · Food security, youth empowerment, local

5. Legacy Steward · Organization history · Heritage, endurance, planned giving

6. Corporate/Foundation · Employee engagement / CSR · Partnership, metrics, co-branding

Axis 3: Lifecycle Stage

Stage · Definition · Key Indicator

Prospect · Identified but has not given · Score "e 15; no gift history

First-time donor · Gave once, within the last 12 months · 1 gift in database; most recent gift < 12 months ago

Repeat donor · 2+ gifts; most recent within 24 months · Active, patterned giving

Loyal donor · 3+ consecutive years of giving · High Recency & Frequency sub-score

Lapsed donor · No gift in 13–36 months · Was active; stopped

Lost donor · No gift in 36+ months · Long-term inactive

Monthly donor · Active recurring gift · Recurring flag in CRM

Planned giving · Documented legacy commitment · Bequest, IRA, trust, or DAF designation

Segment Matrix: Score Band × Lifecycle

This matrix produces the primary communication segment for each donor.

· Prospect · First-Time · Repeat · Loyal · Lapsed · Monthly · Planned Giving

Platinum · VIP prospect research · Personal onboarding · CEO stewardship · Legacy society · Immediate reactivation (CEO call) · Upgrade to major · Steward + annual face-to-face

Gold · Major gift cultivation · Personal thank-you + 90-day protocol · Quarterly personal touch · Upgrade to Platinum; board candidate · Personal reactivation (VP Dev) · Upgrade ask · Legacy conversation

Silver · Event invitation · 90-day protocol · Segmented appeals · Upgrade to Gold; event host · Segmented reactivation · Impact updates · Legacy conversation

Bronze · Light touch · Welcome series · Annual fund appeals · Upgrade to Silver; volunteer ask · Reactivation appeal · Stewardship email · General acknowledgment

Developing · Research · Welcome email · Standard appeals · Upgrade assessment · Low-priority · Standard stewardship · N/A

Watch/Inactive · No outreach · Auto thank-you · Mass appeal · Mass appeal · Remove after 36 months · N/A · N/A

Communication Segments for Appeals

When building an appeal (year-end, camp scholarship, Something To Eat, etc.), segment the audience as follows:

Year-End Appeal Segments

Segment Name · Criteria · Ask Amount · Channel · Messaging

Major gift personal ask · Platinum + Gold; Loyal or Repeat · Prior year gift + 15–25% · In-person or phone · Personalized impact; specific project; CEO or VP Dev

Mid-level upgrade · Silver; Repeat or Loyal · Prior year gift + 15–25% · Personal letter + email · Impact story + specific ask; camp or neighborhood focus per persona

Annual fund renewal · Bronze; Repeat or Loyal · Prior year gift amount · Direct mail + email · Organizational impact; thank for loyalty; renewal language

First-time conversion · Any band; First-Time · 75–100% of first gift · Email (personal template) · "Thank you for your first gift. Here's what it did. Join us again."

Lapsed reactivation · Silver+; Lapsed 13–24 months · 50–75% of last gift · Direct mail + email · "We miss you. Here's what's new."

Monthly giving invite · Bronze + Silver; Repeat · \$25–\$100/month (based on annual history ÷ 12) · Email · Convenience + sustained impact framing

Broad appeal · Watch + Developing; any lifecycle · Unspecified or \$50–\$100 · Email only · General impact; low-cost delivery

Camp Scholarship Appeal Segments

Segment Name · Criteria · Ask Amount · Messaging

Camp Family major ask · Gold+; Persona 1 (Camp Family) · \$5,000+ (named campership) · "You know what camp does. Fund a full campership."

Camp Family mid-level · Silver; Persona 1 · \$500–\$2,500 · "Send another kid to camp this summer."

Church partner ask · Any; Persona 2 (Church Partner) · \$1,000–\$5,000 (church budget) · "Your church sends youth. Help us welcome more."

General camp appeal · Bronze + Developing; any persona · \$50–\$250 · "Every gift sends a child to camp."

Something To Eat / Neighborhood Appeal Segments

Segment Name · Criteria · Ask Amount · Messaging

Neighborhood major · Gold+; Persona 4 or 6 · \$5,000+ · "Feed 350+ families every month. Partner with us."

Neighborhood mid-level · Silver; Persona 4 · \$250–\$1,000 · "Your gift puts food on the table."

Volunteer-to-donor · Any; volunteered at STE but hasn't given · \$50–\$250 · "You've packed meals. Now help us do more."

Corporate partner · Persona 6; any band · \$5,000–\$25,000 (sponsorship) · "Engage your team. Feed the community."

Reporting Segments for the Board

The board should see the donor file organized into portfolio views that map to strategic questions.

Portfolio Dashboard Segments

- · ----- · -----
- By Score Band · "How healthy is our donor pipeline?" · Count, total giving, avg. gift, retention rate per band
- By Persona · "Which donor types are growing or shrinking?" · Count, total giving, avg. gift per persona
- By Lifecycle · "Are we retaining and upgrading?" · First-time retention rate, upgrade rate, lapsed %, monthly donor count
- Top 20 Donors · "What is our concentration risk?" · Names, scores, giving history, trend (up/down/flat)
- Planned Giving Pipeline · "What is our long-term security?" · # commitments, estimated future value, new commitments this year
- New Donor Acquisition · "Is the pipeline being fed?" · # new donors, avg. first gift, source (event, campaign, referral, organic)
- Board Report Template (Quarterly)

..

DONOR PORTFOLIO SUMMARY — Q[X] FY[YEAR]

HEADLINE METRICS

- Total donors (active, gave in past 24 months): _
- Total contributed revenue YTD: \$_

ACTIONS NEEDED

- [Board introductions requested for specific prospects]
- [Events or stewardship activities requiring board participation]

Segmentation in the CRM

For the segmentation framework to function, the CRM (or prospect database) must track:

Field · Purpose · Source

----- · ----- · -----

donor_score · Composite 0–100 score · Donor Scoring Rubric (manual or AI-assisted)

score_band · Platinum / Gold / Silver / Bronze / Developing / Watch / Inactive · Derived from score

capacity_sub · Capacity sub-score (0–25) · Scoring rubric

affinity_sub · Affinity sub-score (0–30) · Scoring rubric

engagement_sub · Engagement sub-score (0–25) · Scoring rubric

recency_freq_sub · Recency & Frequency sub-score (0–20) · Scoring rubric

primary_persona · Which of the 6 personas best fits · Manual assignment or AI inference

lifecycle_stage · Prospect / First-Time / Repeat / Loyal / Lapsed / Lost / Monthly / Planned · Derived from giving history

last_gift_date · Date of most recent gift · CRM transaction log

total_giving · Cumulative lifetime giving to YF · CRM transaction log

gift_count · Total number of gifts · CRM transaction log

last_score_date · When the score was last calculated · Manual entry

data_completeness · % of scoring dimensions with data (0–100%) · Derived

hidden_platinum_flag · Boolean: Capacity "e 18 AND Score < 50 · Derived

relationship_manager · Assigned staff member · Manual assignment based on score band

Segment Maintenance

Quarterly Tasks

- [] Rescore all Platinum and Gold donors
- [] Review Hidden Platinum flags; assign research or outreach
- [] Update lifecycle stages based on giving activity
- [] Generate board report using template above

Annual Tasks

- [] Rescore all donors in database
- [] Reassign personas based on updated engagement data
- [] Archive Inactive donors (score 0–14 for 3+ years)
- [] Recalibrate scoring rubric weights using actual retention and gift data
- [] Update segmentation criteria if programs or strategic priorities change
- [] Validate Expected Value model against actual contributed revenue

Integration with Existing Systems

System · How Segmentation Integrates

----- · -----

This Dashboard · Score band and persona data can be surfaced in the Donor Intelligence panel alongside existing demo data (donors-data.js (../js/donors-data.js))

Master Prospect List · Existing Tier 1/2/3 scores map to Capacity sub-score; full rubric scoring adds three dimensions

AI Fundraising Guide · Segmentation informs AI-assisted communications: persona + score band !' message template

Integration Blueprint · Supabase schema includes prospects` table fields aligned with segmentation fields above

CMS Data · Audiences in cms-data.js (../../js/cms-data.js) can be generated from segments (e.g., "High capacity + Camp affinity" = Gold + Persona 1)

Donor Scoring Rubric

A 0–100 scoring system for evaluating any donor or prospect's fit, capacity, and expected value to Youthfront. Designed for use by development staff, board members, and AI-assisted prospect research.

Purpose

This rubric produces a single composite score (0–100) for any individual donor or prospect. The score answers: "How likely is this person to become and remain a valuable Youthfront donor?" It combines capacity (ability to give), affinity (alignment with mission), engagement (relationship depth), and recency/frequency (behavioral signals) into one number that can be used for prioritization, segmentation, and expected value estimation.

The rubric is designed to be:

- Applicable to any donor — from a \$50 first-time giver to a \$100K major gift prospect
- Usable with partial data — score what you know; flag what you don't
- Compatible with the Master Prospect List — the existing 0–100 scoring (wealth/political signals) feeds into the Capacity dimension here
- Interpretable — every score has a meaning, a recommended action, and an expected value range

The Four Dimensions

The score is built from four weighted dimensions. Each dimension is scored 0–25, and the four are summed to produce a composite 0–100.

Dimension · Weight · What It Measures · Why It Matters

----- · ----- · ----- · -----

Capacity · 25 pts · Financial ability to give · Determines gift size ceiling

Affinity · 30 pts · Mission alignment and values fit · Strongest predictor of retention and lifetime value

Engagement · 25 pts · Depth of existing relationship · Predicts conversion likelihood and gift timing

Recency & Frequency · 20 pts · Behavioral giving signals · Indicates momentum and donor health

Note: Affinity is weighted highest (30 pts vs. 25/25/20) because Youthfront's donor base — as reflected in its board — prioritizes mission alignment over raw wealth. A deeply aligned \$5K donor retained for 20 years (\$100K lifetime) outperforms a loosely connected \$25K one-time gift.

Dimension 1: Capacity (0–25 points)

How much can this person or household give?

Score · Criteria · Typical Profile

----- · ----- · -----

21–25 · Est. net worth \$5M+ OR household income \$500K+ OR confirmed major gift history (\$10K+ to any nonprofit) OR Forbes/KCBJ wealth list · KC Philanthropist persona; Master Prospect List Tier 1

16–20 · Est. net worth \$1M–\$5M OR household income \$200K–\$500K OR mid-level gift history (\$2,500–\$9,999) OR C-suite/

owner title OR property value \$750K+ · Upper-mid professional; Master Prospect List Tier 2

11–15 · Est. net worth \$500K–\$1M OR household income \$100K–\$200K OR gift history \$500–\$2,499 OR director/VP-level title · Camp Family Champion (upper range); Church Partner Pastor (upper range)

6–10 · Household income \$50K–\$100K OR gift history \$100–\$499 OR mid-career professional · Neighborhood Builder; early-career professional

1–5 · Limited income indicators OR student/retired with modest assets OR no giving history found · Volunteer-first prospects; young alumni

0 · No capacity data available · Requires research before scoring

Data Sources for Capacity Scoring

- Political giving records (OpenFEC) — single best free proxy for wealth
- Property records (county assessor, ATTOM)
- Professional title and employer (LinkedIn, SEC EDGAR, OpenCorporates)
- Nonprofit board roles and compensation (ProPublica 990s)
- Forbes, KCBJ Book of Lists, Ingram's 250
- Self-reported or CRM giving history to Youthfront
- Wealth screening tools (DonorSearch, iWave) if available

Dimension 2: Affinity (0–30 points)

How well does this person's values, faith, and interests align with Youthfront's mission?

Score · Criteria · Typical Profile

----- · ----- · -----

25–30 · Active Christian faith + church connection + personal/family connection to a YF program (camp, neighborhood, family) + explicitly expresses resonance with formation, community, or youth ministry · Legacy Steward; long-time Camp Family Champion; Church Partner Pastor who sends youth groups annually

19–24 · Christian faith + general interest in youth/family/community causes + some awareness of Youthfront OR gives to similar organizations (faith-based youth, camps, food security) · New prospect with strong values alignment but no direct YF connection yet

13–18 · Some faith or spiritual interest + cares about youth/community OR gives to secular youth/education/community causes in KC + no direct YF connection · KC Philanthropist who gives to youth causes but isn't faith-motivated

7–12 · General philanthropic interest + KC community engagement + no particular youth/faith/family focus · Corporate Connector motivated by CSR, not mission

1–6 · Minimal alignment signals; philanthropic but in unrelated areas (arts, higher ed, environment exclusively) · Low-priority prospect; may convert with cultivation but unlikely

0 · No affinity data OR known misalignment (hostile to faith-based orgs, no interest in youth/family) · Disqualified or deprioritized

Affinity Scoring Checklist (add points within the 0–30 range)

Signal · Points

----- · -----

Active Christian faith (church member, elder, deacon, etc.) · +6

Personal/family connection to YF program (camp, STE, counseling, etc.) · +8

Gives to faith-based organizations · +4

Gives to youth/family/education causes · +4

Expresses resonance with Youthfront's specific language (formation, belonging, church-assisting) · +4

KC community identity and investment · +3

Serves on nonprofit board(s) in related cause areas · +3

No faith connection · -4

No youth/family/community interest · -4

Cap at 30. Use judgment when signals conflict.

Dimension 3: Engagement (0–25 points)

How deep is this person's existing relationship with Youthfront?

Score · Criteria · Typical Profile

----- · ----- · -----

21–25 · Board member OR major donor (\$10K+) OR multi-year volunteer leader OR personal relationship with CEO/VP Development OR planned giving commitment · Board members; top-tier major donors; legacy society members

16–20 · Mid-level donor (\$1K–\$9,999) OR active volunteer OR church partner contact OR attended 3+ YF events OR connected to a board member who has made an introduction · Active Camp Family Champion; engaged Church Partner Pastor

11–15 · Donor (\$100–\$999) OR attended 1–2 events OR child in YF program OR one-time volunteer OR on email list and opens regularly · First-year camp parent; Something To Eat one-time volunteer

6–10 · On mailing list OR attended one event OR identified by prospect research but no contact yet OR connected to a YF donor/volunteer · Cold prospect with a warm connection; event attendee

1–5 · Name only in prospect database OR identified through wealth screening with no relationship signal · Pure prospect; requires outreach to score higher

0 · No engagement data · New prospect; begin cultivation

Engagement Scoring Checklist (add points within the 0–25 range)

Signal · Points

----- · -----

Board member (current or former) · +10

Personal relationship with YF executive (CEO, VP Dev, Sr. Dir. Advancement) · +6

Major donor (\$10K+ cumulative) · +6

Active volunteer (3+ events/year) · +5

Mid-level donor (\$1K–\$9,999 cumulative) · +4

Church partner contact (pastor, elder, youth director) · +4

Child/grandchild in YF program · +4

Attended YF event in past 12 months · +3

On email list, opens 50%+ of emails · +2

Connected to a board member or major donor (can be introduced) · +2

Identified by prospect research only (no contact) · +1

Cap at 25.

Dimension 4: Recency & Frequency (0–20 points)

How recently and how often has this person given or engaged?

Score · Criteria · Typical Profile

----- · ----- · -----

17–20 · Gave in the last 6 months AND gave 3+ times in the past 24 months AND increasing gift trajectory · Active, growing donor; monthly giver

13–16 · Gave in the last 12 months AND gave 2+ times in the past 24 months · Healthy annual donor; consistent supporter

9–12 · Gave in the last 12–24 months OR gave once in the past 12 months · Recent but not yet patterned; first-time donor

5–8 · Gave 2–5 years ago OR engaged (event, volunteer) in the past 12 months but no gift · Lapsed donor; engaged non-donor

1–4 · Gave 5+ years ago OR last engagement 2+ years ago · Lapsed; requires reactivation

0 · Never gave OR no engagement history · New prospect; no behavioral data

Recency & Frequency Scoring Checklist

Signal · Points

----- · -----

Gift in last 6 months · +6

Gift in last 6–12 months · +4

Gift in last 12–24 months · +2

3+ gifts in past 24 months · +5

2 gifts in past 24 months · +3

Monthly/recurring donor · +4

Increasing gift trajectory (last gift > prior gift) · +3

Event attendance or volunteer activity in past 12 months · +2

Lapsed 2–5 years · -2

Lapsed 5+ years · -4

Floor at 0; cap at 20.

Composite Score Calculation

..

Donor Score = Capacity (0–25) + Affinity (0–30) + Engagement (0–25) + Recency & Frequency (0–20)

,

Maximum possible score: 100

Score Interpretation

Score Bands

Score Range · Classification · Meaning · Recommended Action

----- · ----- · ----- · -----

90–100 · Platinum · Exceptionally high fit, capacity, and engagement. Likely a board member, major donor, or planned giving candidate. · Assign to VP Development or CEO for personal stewardship. Annual face-to-face visit. Planned giving conversation. Treat as top 1% of donor file.

75–89 · Gold · Strong on most dimensions. High-capacity prospect with mission alignment and some engagement, OR deeply engaged mid-level donor with strong affinity. · Assign to major gift officer. Personal cultivation plan (quarterly contact). Upgrade strategy toward major gift or planned giving.

60–74 · Silver · Solid on 2–3 dimensions with room to grow. May be a mid-level donor with good affinity but limited engagement, or a high-capacity prospect early in cultivation. · Active cultivation. Invite to events. Build relationship through program connections. Move toward mid-level or major gift ask within 12–18 months.

45–59 · Bronze · Moderate fit. May have capacity but limited affinity, or strong affinity but limited capacity. Worth cultivating but not a top priority. · Segment into general appeal audience with targeted messaging. Volunteer engagement to build affinity and engagement scores.

30–44 · Developing · Early-stage prospect or donor with limited data. Score may be low due to missing information rather than poor fit. · Research to fill data gaps. One exploratory touch (event invitation, volunteer opportunity). Rescore after 6 months.

15–29 · Watch · Low fit, capacity, or engagement. May convert over time with significant cultivation, or may not be a viable prospect. · Low-priority. Include in mass communications only. Rescore annually. Do not invest relationship manager time.

0–14 · Inactive/Unqualified · No meaningful fit, capacity, or engagement signals. May be a data-only record or a mismatched prospect. · Archive or remove from active prospect list. Do not solicit.

Interpreting the Score in Context

A donor score is not a value judgment on the person — it is a prioritization tool for development staff time and resources. A score of 35 does not mean someone is unimportant; it means the development team's limited hours are better invested in higher-scoring prospects where the probability of return is greater.

Key principles:

- Score what you know; flag what you don't. A score of 40 with three dimensions at 0 (no data) is different from a score of 40 with all four dimensions populated. Always note data completeness.

- Scores change. A prospect who attends a camp open house, whose child enrolls, and who makes a first gift will see their

score rise 15–25 points in a single year.

- Affinity is the anchor. A high-capacity, low-affinity prospect (score: 60 = 25 capacity + 5 affinity + 20 engagement + 10 recency) is a worse long-term bet than a moderate-capacity, high-affinity prospect (score: 60 = 12 capacity + 28 affinity + 12 engagement + 8 recency). The second donor will give longer and refer others.

Expected Value by Score Band

Expected value (EV) estimates the annual and lifetime financial contribution a donor in each band is likely to produce, based on typical gift ranges, retention rates, and referral value for an organization of Youthfront's size and profile.

Industry Benchmarks Applied

Metric · Benchmark · Source

----- · ----- · -----

Average donor retention rate (all nonprofits) · 43–45% · AFP Fundraising Effectiveness Project

First-time donor retention rate · 19–23% · AFP FEP

Repeat donor retention rate · 60–65% · AFP FEP

Major donor retention rate · 70–85% · Penelope Burk, *Donor-Centered Fundraising*

Average annual gift (all donors) · \$500–\$1,200 · Blackbaud Institute / GivingUSA

Donor lifetime (repeat donors) · 5–8 years · AFP / Bloomerang

Donor lifetime (major donors) · 10–20+ years · Penelope Burk

Referral value multiplier · 1.2–1.5× of direct giving · Network for Good

Expected Value Table

Score Band · Classification · Expected Annual Gift · Expected Retention Rate · Expected Donor Lifetime · Expected Lifetime Value (ELV) · Referral Multiplier · Adjusted ELV

----- · ----- · ----- · ----- · ----- · ----- · ----- · -----

90–100 · Platinum · \$15,000–\$100,000+ · 85–95% · 15–25+ years · \$225,000–\$2,500,000+ · 1.5× · \$337,500–\$3,750,000+

75–89 · Gold · \$5,000–\$25,000 · 75–85% · 10–20 years · \$50,000–\$500,000 · 1.4× · \$70,000–\$700,000

60–74 · Silver · \$1,000–\$10,000 · 60–75% · 7–12 years · \$7,000–\$120,000 · 1.3× · \$9,100–\$156,000

45–59 · Bronze · \$250–\$2,500 · 45–60% · 4–8 years · \$1,000–\$20,000 · 1.2× · \$1,200–\$24,000

30–44 · Developing · \$50–\$500 · 25–45% · 2–5 years · \$100–\$2,500 · 1.1× · \$110–\$2,750

15–29 · Watch · \$0–\$100 · 10–25% · 1–3 years · \$0–\$300 · 1.0× · \$0–\$300

0–14 · Inactive · \$0 · <10% · N/A · \$0 · N/A · \$0

How to Read the Expected Value Table

Expected Lifetime Value (ELV) = Expected Annual Gift × Expected Donor Lifetime, adjusted for retention decay.

Referral Multiplier accounts for the fact that higher-scored donors introduce others. A Platinum donor who gives \$25K/year for 15 years (\$375K direct) and introduces two Gold donors is worth \$375K + (2 × \$70K) = \$515K+ to the organization.

Adjusted ELV = ELV × Referral Multiplier. This is the figure to use when justifying development team time allocation.

Practical Application: Time Allocation

Score Band · % of Development Staff Time · Rationale

----- · ----- · -----

90–100 (Platinum) · 30–40% · Highest ROI per hour invested; personal stewardship

75–89 (Gold) · 25–30% · Major gift pipeline; requires cultivation

60–74 (Silver) · 15–20% · Mid-level cultivation; event-driven

45–59 (Bronze) · 5–10% · Segmented communications; light touch

0–44 · 5% · Mass communications only

Scoring Examples

Example 1: Board Chair (Tim Smith)

Dimension · Score · Rationale

----- · ----- · -----

Capacity · 20 · Board chair of \$5M nonprofit; professional role suggests upper-mid to high net worth; no public wealth data to confirm ultra-high

Affinity · 28 · Board service = deep mission alignment; Christian faith; long-term commitment to youth ministry

Engagement · 25 · Board chair; personal relationship with CEO; maximum engagement

Recency & Frequency · 16 · Presumed annual donor; board members typically give annually

Total · 89 · Gold/Platinum — VP Development stewardship; planned giving conversation

Example 2: New Camp Parent (hypothetical)

Dimension · Score · Rationale

----- · ----- · -----

Capacity · 12 · Household income est. \$150K (registered for camp, which costs \$300–\$600; lives in Johnson County); no other wealth signals

Affinity · 22 · Child in YF Camp; active church member; family-oriented; resonates with formation language

Engagement · 11 · First year as camp parent; attended camp open house; on email list

Recency & Frequency · 4 · No prior gift to YF; registration payment only; camp within last 6 months

Total · 49 · Bronze — Send post-camp appeal; invite to year-end giving; potential to move to Silver within 12 months

Example 3: Peter Mallouk (Tier 1 Prospect, no relationship)

Dimension · Score · Rationale

----- · ----- · -----

Capacity · 25 · Forbes billionaire (\$16.1B); Creative Planning CEO; maximum capacity

Affinity · 8 · KC-based; philanthropic; no known faith connection or youth/family cause alignment; wealth management background

Engagement · 1 · Name in prospect database only; no contact, no event attendance, no introduction made

Recency & Frequency · 0 · No giving history; no engagement history

Total · 34 · Developing — Research affinity signals; seek board member introduction; do NOT make a cold ask. Score could jump to 60+ with one successful introduction and discovered faith/youth interest.

Example 4: Long-time Monthly Donor (hypothetical)

Dimension · Score · Rationale

----- · ----- · -----

Capacity · 10 · Household income est. \$80K; gives \$100/month (\$1,200/year); modest assets

Affinity · 27 · Active church member; child attended camp 5 years ago; volunteers at Something To Eat quarterly; formation language in giving notes

Engagement · 18 · Mid-level donor (\$1,200/year); active volunteer; knows Sr. Dir. Advancement personally; attended 4 events in past year

Recency & Frequency · 19 · Monthly recurring gift; gave 12 times in past 12 months; increasing trajectory (started at \$50/month 3 years ago)

Total · 74 · Silver/Gold — Upgrade conversation toward \$2,500/year; legacy giving conversation in 5 years; high retention, high referral value

Scoring Process

For Development Staff

1. Gather data from CRM, prospect research, and personal knowledge.
2. Score each dimension using the checklists above. Record the sub-scores.
3. Sum the four dimensions for the composite score.
4. Look up the score band and follow the recommended action.
5. Record the score and date in the CRM. Set a rescore reminder for 6–12 months.
6. Note data gaps. If two or more dimensions score 0 due to missing data (not poor fit), flag for research.

For AI-Assisted Scoring

When using an AI agent (per the Integration Blueprint), provide the agent with:

- Name, employer, title, city
- Any known giving history (to YF or other nonprofits)
- Known connections to YF (board, staff, volunteer, program participant)
- Faith/church affiliation if known

1. Query available APIs (OpenFEC, ProPublica, property records, etc.) for Capacity signals.
2. Cross-reference nonprofit board roles and giving patterns for Affinity signals.
3. Check CRM for Engagement and Recency/Frequency data.
4. Return the four sub-scores, composite score, classification, and recommended action.

Ideal Donor Profile

Who gives to Youthfront — and who should? A composite profile derived from board composition, organizational values, program footprint, financial history, and KC regional donor landscape.

Why This Document Exists

Fundraising works best when the development team can articulate — concretely and consistently — the characteristics of the people most likely to give, give generously, and give repeatedly. This Ideal Donor Profile (IDP) synthesizes what we know about Youthfront's existing stakeholders (especially the board of directors, whose members are both donors and proxies for the donor base) with the organization's mission, geography, and program mix to produce a durable reference for prospect identification, qualification, and cultivation.

This document should be reviewed annually alongside the board roster, 990 summary, and strategic plan.

Composite Profile: The Youthfront Ideal Donor

Demographics & Geography

Attribute · Profile · Inference Source

----- · ----- · -----

Age range · 40–70 (primary); 30–45 (emerging) · Board members are mid-career to senior professionals; emerging donors trend younger via camp alumni and church networks

Household income · \$150K+ (mid-level); \$500K+ (major gift) · KC metro cost of living, board member professional roles, and regional wealth data

Geography · Kansas City metro: Johnson County KS (Leawood, Overland Park, Prairie Village, Mission Hills, Olathe), Jackson County MO (KC proper, Lee's Summit), Wyandotte County KS (KCK) · Org HQ in Westwood KS; camp properties in KS; neighborhood work in Argentine KCK; board and staff reside throughout metro

Family status · Married with children or grandchildren; family-oriented · YF Camp and YF Family programs center on families; board members reflect this

Education · Bachelor's degree or higher; many hold graduate/professional degrees · Board includes D.Min. (King), professionals in business, education, ministry

Psychographics & Values Alignment

Attribute · Profile · Why It Matters

----- · ----- · -----

Faith · Active Christian; connected to a local church; values formation over formula · Youthfront is explicitly Christian and church-assisting; donors must resonate with this identity

Theology · Comfortable with contemplative, missional, and ecumenical expressions of faith; values prayer, community, and theological reflection · Youthfront's VIM framework, midday prayer practice, and staff theologian (Andrew Root) signal a thoughtful, non-partisan theological posture

Social concern · Cares about youth development, food insecurity, juvenile justice, neighborhood equity, and cross-boundary relationship · Maps directly to YF Neighborhood (Something To Eat, ImagineX, Snack Shack KC, Arise) and YF Family programs

Philanthropy posture · Gives to multiple nonprofits; may serve on other boards; sees giving as stewardship and participation in God's mission · Board members like Ed Garlich (dual board/staff) and compensated members signal deep engagement, not passive check-writing

Camp connection · Personal or family history with summer camp; values outdoor, formative experiences for children · YF Camp is the flagship program (6,000+ youth/families, 1,000+ acres, 200+ churches); camp alumni and parents are the warmest pipeline

Community identity · Identifies with Kansas City; proud of local institutions; wants to invest in the region · Youthfront is 80+ years rooted in KC; donors value local impact over national brand

Capacity & Giving Behavior

Attribute · Profile · Benchmark

----- · ----- · -----

Annual gift range (mid-level) · \$1,000–\$9,999 · Backbone of contributed revenue (\$2.95M total contributions FY25)

Annual gift range (major) · \$10,000–\$100,000+ · Board-level and top-tier individual donors

Giving frequency · Annual or semi-annual; some monthly · Year-end and spring appeal cycles; recurring giving through camp registrations

Planned giving propensity · Moderate to high for long-tenured donors · 80+ year history creates multi-generational loyalty; estate and legacy gifts are underexplored opportunity

Non-cash giving · In-kind (food, supplies for Something To Eat), volunteer time, professional services · YF Neighborhood partners with Harvesters and businesses; board members contribute expertise

Board as Donor Proxy: What the Board Tells Us

The board of directors is both a fundraising asset and a mirror of the donor base. Patterns observable in the current board (FY 2025) suggest the following about the ideal donor:

1. Professional Diversity, Not Wealth Concentration

The board is not composed exclusively of ultra-high-net-worth individuals. Members include a CEO (King), a development associate who also serves on staff (Ed Garlich), and members without public wealth signals (Mitchum, Thomas, Jeff Smith). This suggests Youthfront's donor base values engagement and mission alignment over raw capacity.

Implication: The ideal donor is someone who **cares deeply**, not necessarily someone who **gives the most**. Cultivation should prioritize relationship and values fit before capacity screening.

2. Dual Roles Signal Deep Investment

Two board members hold staff roles (Mike King as CEO, Ed Garlich in development). Tina Harris and Ed Garlich receive compensation. This level of intertwining between governance and operations signals an organization where insiders are also donors — people who give because they see the work up close.

Implication: Staff, volunteers, camp counselors, and program participants are a donor pipeline. The ideal donor often starts as a participant or partner.

3. Long Tenure and Continuity

Board leadership rotates (Reinhardt from Chair to Vice Chair; Blevins from Vice Chair to Member) but the core group is stable. Lou Francis's departure is the exception, not the rule.

Implication: The ideal donor is a long-term relationship, not a transactional one. Retention and stewardship matter more than acquisition volume.

4. Church and Ministry Connections

The board's composition — a CEO with a Doctor of Ministry, a staff theologian at Luther Seminary, and a church-assisting mission — implies that church leaders, pastors, and ministry professionals are natural connectors to donors, even if they are not major donors themselves.

Implication: Donor prospecting should include church partnership networks (200+ annually) as a warm introduction channel.

Five Attributes of the Highest-Value Youthfront Donor

Ranked by predictive strength for giving capacity *and* retention:

1. Personal connection to a Youthfront program — Camp alumni, camp parent, Something To Eat volunteer, church partner, counseling client. This is the single strongest predictor of long-term giving.
2. Active Christian faith with a church home — Resonates with the case for support; shares the theological vocabulary; trusts the ECFA accreditation signal.
3. Kansas City roots or residence — Understands the geography, neighborhoods, and institutions; can visit camp; sees the Argentine footprint; knows the community.
4. Family with children or grandchildren — Direct beneficiary of YF Camp and YF Family programming; emotional and practical stake in the organization's work.
5. Financial capacity (\$150K+ household income or \$500K+ net worth) — Necessary for mid-level and major gifts; correlated with professional roles on the board and in the prospect list.

Negative Indicators (Disqualifiers or Low-Priority Signals)

Not every wealthy KC resident is an ideal Youthfront donor. The following reduce priority:

Signal · Why

----- · -----

No faith affiliation or hostility to religious organizations · Youthfront is explicitly Christian; secular-only philanthropists are unlikely to align

No connection to youth, family, or camp programming · Without a personal "why," retention is low

Out-of-market (no KC ties) · Youthfront's impact is local; national donors are rare and hard to steward

Transactional giver (gives only for naming rights or tax benefit) · Youthfront's culture is relational and missional; purely transactional donors churn

Political or theological extremism · Youthfront's posture is ecumenical and contemplative; donors on the ideological margins create governance risk

How to Use This Profile

Use Case · How

----- · -----

Prospect qualification · Score new prospects against the five attributes above; prioritize those with 3+ matches

Event invitation lists · Filter event attendees and invitees for geographic, faith, and program-connection fit

Board recruitment · Seek board candidates who embody the ideal donor profile (they will also attract others like them)

Appeal messaging · Tailor case-for-support language to the psychographic profile: formation, belonging, community, prayer, and local impact

Major gift strategy · Use the donor scoring rubric (see *Donor Scoring Rubric*) to rank prospects and allocate relationship manager time

Planned giving outreach · Target long-tenured donors (10+ years) with camp or family program history for legacy conversations

Donor Expected Value & Interpretation Guide

How to translate a donor score into financial projections, time-allocation decisions, and portfolio management. Grounded in nonprofit fundraising benchmarks and calibrated to Youthfront's financial profile.

What Is Expected Value?

In nonprofit fundraising, Expected Value (EV) is the projected financial return from a donor relationship over time, adjusted for the probability that the donor continues giving. It answers: "What is this donor relationship likely to be worth to us?"

EV is not a prediction — it is a planning tool. It helps development staff and leadership:

- Allocate relationship manager time to the highest-ROI relationships
- Forecast contributed revenue with greater accuracy
- Justify development expenses (events, travel, tools) against projected returns
- Compare the value of acquiring new donors vs. retaining and upgrading existing ones
- Set realistic campaign goals grounded in the current donor file

The Expected Value Formula

``

Expected Lifetime Value (ELV) = $\sum_{t=1}^{\infty} (\text{Annual Gift} \times \text{Retention Probability})$ for each future year

Simplified:

$\text{ELV} = \text{Average Annual Gift} \times \text{Average Donor Lifespan} \times \text{Retention Factor}$

Adjusted ELV = ELV $\times$ Referral Multiplier

``

Where:

- Average Annual Gift = the donor's typical annual contribution (or estimated first gift for prospects)
- Average Donor Lifespan = how many years a donor in this band typically remains active
- Retention Factor = accounts for year-over-year attrition (not everyone retained every year)
- Referral Multiplier = value of donors introduced by this donor (higher-scored donors refer more)

Youthfront Financial Context

These benchmarks calibrate the EV model to Youthfront's actual financial position.

Metric · Value · Source

----- · ----- · -----

Total contributions (FY 2025) · \$2,951,442 · Form 990

Total revenue (FY 2025) · \$4,865,857 · Form 990

Fundraising expense (FY 2025) · \$418,964 · MinistryWatch

Fundraising cost ratio · 14.2% of contributions · \$419K / \$2.95M

Program expense ratio · 82% · MinistryWatch

Net assets (FY 2025) · \$6,521,914 · Form 990

Operating surplus/(deficit) (FY 2025) · (\$424,496) · Form 990

5-year average contributions · ~\$4.2M revenue, ~\$2.7M contributions · Form 990 trend

Development staff · VP Development, Sr. Dir. Advancement, Dir. Events & Donor Relations, Manager Donor Relations, Development Associate (Ed Garlich) · Phase 3 profiles

Key insight: Youthfront ran a \$424K operating deficit in FY 2025 after a \$695K surplus in FY 2024. Contributed revenue (\$2.95M) is 61% of total revenue and is the most variable component. Every incremental dollar of donor revenue directly impacts organizational sustainability.

Expected Value by Score Band

Detailed EV Model

Score Band · Annual Gift Range · Midpoint · Retention Rate · Avg. Lifespan (years) · Retention-Adjusted ELV · Referral Multiplier · Adjusted ELV

90–100 (Platinum)	· \$15,000–\$100,000+	· \$40,000	· 90%	· 20	· \$720,000	· 1.5×	· \$1,080,000
75–89 (Gold)	· \$5,000–\$25,000	· \$12,000	· 80%	· 15	· \$144,000	· 1.4×	· \$201,600
60–74 (Silver)	· \$1,000–\$10,000	· \$3,500	· 67%	· 10	· \$23,450	· 1.3×	· \$30,485
45–59 (Bronze)	· \$250–\$2,500	· \$1,000	· 52%	· 6	· \$3,120	· 1.2×	· \$3,744
30–44 (Developing)	· \$50–\$500	· \$200	· 35%	· 3.5	· \$245	· 1.1×	· \$270
15–29 (Watch)	· \$0–\$100	· \$50	· 17%	· 2	· \$17	· 1.0×	· \$17
0–14 (Inactive)	· \$0	· \$0	· —	· —	· \$0	· —	· \$0

Retention-Adjusted ELV = Annual Midpoint × Lifespan × Retention Rate. This is conservative; it does not model gift growth over time, which typically adds 15–30% for Silver+ donors.

What This Means for Youthfront

- If the current donor file contains:
- 5 Platinum donors !' ~\$5.4M lifetime value
 - 15 Gold donors !' ~\$3.0M lifetime value
 - 50 Silver donors !' ~\$1.5M lifetime value
 - 150 Bronze donors !' ~\$561K lifetime value
 - 300 Developing donors !' ~\$81K lifetime value

Total estimated portfolio lifetime value: ~\$10.5M+

This illustrates why the top 20 donors (Platinum + Gold) represent ~80% of total lifetime value — a pattern consistent with the Pareto principle observed across nonprofit fundraising.

Cost to Acquire vs. Cost to Retain

Metric · First-Time Donor · Repeat Donor · Major Donor

Cost to acquire · \$1.00–\$1.50 per \$1 raised · N/A · \$0.20–\$0.50 per \$1 raised

Cost to retain · N/A · \$0.10–\$0.25 per \$1 raised · \$0.05–\$0.15 per \$1 raised

Year 1 retention rate · 19–23% · 60–65% · 70–85%

Break-even year · Year 2–3 (if retained) · Year 1 · Year 1

Key insight: It costs 5–10× more to acquire a new donor than to retain an existing one. For Youthfront, this means:

- Retention is more profitable than acquisition. A 5% improvement in retention rate (e.g., from 45% to 50%) can increase lifetime revenue by 25–30%.
- First-time donor conversion is the highest-leverage moment. Getting a first-time donor to give a second time (within 90 days) is the single most important development activity.
- Major donor stewardship pays for itself. A VP Development earning \$111K/year who retains 10 Platinum/Gold donors at \$200K+ in annual giving has an ROI of ~2:1 on salary alone.

Interpreting Scores in Relationship to Expected Value

Score-to-Action Matrix

If the score is... · And the data is... · Then the action is... · Because...

90–100 · Complete · Personal stewardship by VP Dev or CEO; annual face-to-face; planned giving ask · EV justifies any reasonable investment in the relationship

75–89 · Complete · Assign to major gift officer; quarterly personal contact; upgrade strategy · Moving from Gold to Platinum doubles EV; worth sustained cultivation

75–89 · Incomplete (low Capacity data) · Research capacity before major ask; may be Platinum in disguise · Missing wealth data may understate true score by 10–15 points

60–74 · Complete · Mid-level cultivation; event-based engagement; targeted appeals · Silver donors are the "farm team" for Gold; investment in this band has compounding returns

60–74 · Incomplete (low Engagement) · Build relationship first; one personal touchpoint · Score may be artificially low because relationship hasn't been initiated

45–59 · Complete · Segmented mass communication; volunteer engagement · EV doesn't justify personal cultivation yet; let engagement build organically

45–59 · Incomplete (low Affinity data) · Exploratory touch to assess mission alignment · Could be Silver or Gold with better affinity data

30–44 · Any · Research to fill gaps; one light touch (event invite); rescore in 6 months · Most of the EV risk here is data incompleteness, not bad fit

0–29 · Any · Mass communication only; do not invest staff time · EV is too low to justify cultivation cost

The "Hidden Platinum" Problem

Some of Youthfront's most valuable future donors will initially score 30–45 because:

- They have high capacity but no engagement (Peter Mallouk: scored 34 in the rubric example)
- They have deep affinity but no relationship with YF yet (e.g., a camp alumni parent who moved back to KC)
- They are legacy stewards whose lapsed status suppresses their Recency score

Solution: Flag any prospect scoring 30–45 who has a Capacity sub-score of 18+ as a "Hidden Platinum" candidate. These prospects should receive a personal research deep-dive and one warm introduction attempt before being deprioritized.

Revenue Forecasting with Donor Scores

Building an Annual Contributed Revenue Forecast

1. Export the scored donor file from CRM, grouped by score band.
2. Multiply count × midpoint × retention rate for each band:

Band · Count · Midpoint Gift · Retention · Forecast

----- · ----- · ----- · ----- · -----

Platinum (90–100) · 5 · \$40,000 · 90% · \$180,000

Gold (75–89) · 15 · \$12,000 · 80% · \$144,000

Silver (60–74) · 50 · \$3,500 · 67% · \$117,250

Bronze (45–59) · 150 · \$1,000 · 52% · \$78,000

Developing (30–44) · 300 · \$200 · 35% · \$21,000

Watch (15–29) · 500 · \$50 · 17% · \$4,250

New donor acquisition · — · — · — · Est. \$100,000–\$200,000

· · · · \$644,500–\$744,500

3. Add new donor acquisition estimate based on historical first-time donor revenue.
4. Add corporate/foundation giving (Persona 6), which is scored separately.
5. Compare to prior year (\$2.95M contributions FY 2025) and adjust.

Note: The illustrative counts above are hypothetical. Actual counts from the CRM will produce a more accurate forecast.

Campaign Goal Setting

Use EV to set realistic campaign goals:

Campaign · Target Audience (Score Band) · # Prospects · Expected Response Rate · Expected Avg. Gift · Campaign Goal

----- · ----- · ----- · ----- · ----- · -----

Year-end appeal · Silver + Gold (60–89) · 65 · 60% · \$4,500 · \$175,500

Camp scholarship fund · Camp Family (Persona 1, 45–74) · 200 · 30% · \$750 · \$45,000

Something To Eat · Neighborhood Builder (Persona 4, 30–59) · 400 · 15% · \$150 · \$9,000

Major gift asks · Platinum + Gold (75–100) · 20 · 75% · \$18,000 · \$270,000

Key Ratios for Board and Leadership

These ratios help the board and CEO understand the health of the donor file at a glance.

Ratio · What It Measures · Healthy Range · Youthfront Target

Donor Concentration Ratio · % of revenue from top 10 donors · 25–40% (too high = risk; too low = no major gifts) · 30–35%

Donor Dependency Ratio · Contributed revenue ÷ total revenue · Varies; YF is 61% contributions · Maintain 55–65%; grow program revenue to reduce dependency

Fundraising Efficiency · \$ raised per \$1 spent on fundraising · \$5–\$10 : \$1 · \$7 : \$1 (current: \$2.95M / \$419K = \$7.04 : \$1)

Donor Pyramid Ratio · Major (\$10K+) : Mid (\$1K–\$10K) : Annual (\$1–\$999) · 1 : 5–10 : 50–100 · 1 : 8 : 75

Retention Rate (overall) · % of donors who gave last year who give again this year · 45–50% (median nonprofit) · Target 55%

Upgrade Rate · % of donors who increased their gift · 10–15% · Target 15%

Planned Giving Pipeline · # of known planned giving commitments · 3–5% of donor file for mature orgs · Establish baseline; target 10 commitments in Year 1

Fundraising Efficiency in Context

Youthfront's current fundraising efficiency (\$7.04 raised per \$1 spent) is above the industry median (\$4–\$6 : \$1 for small-to-mid nonprofits). This indicates:

- The development team is producing efficiently
- There may be underinvestment in fundraising — spending more on development (e.g., donor intelligence tools, additional cultivation events, planned giving officer) could yield disproportionate returns
- The \$424K operating deficit suggests the organization needs to grow contributed revenue by \$500K–\$750K to achieve sustainable surplus. At a \$7:\$1 efficiency ratio, this would require ~\$70K–\$110K in additional fundraising investment.

Planned Giving: The Multiplier

Planned giving (bequests, IRA charitable rollovers, charitable remainder trusts, donor-advised fund designations) is the highest-leverage, lowest-cost fundraising channel for organizations with Youthfront's profile:

- 80+ year history creates multi-generational loyalty (Legacy Steward persona)
- Camp alumni pipeline spans decades
- Average bequest to nonprofits: \$35,000–\$75,000 (national median)
- Planned giving donors give 2–3× more annually while living than non-planned-giving donors

Planned Giving EV Model

Scenario · Assumptions · Value

Conservative · 5 planned giving commitments × \$35K average bequest over 10 years · \$175,000

Moderate · 15 commitments × \$50K average over 10 years · \$750,000

Aggressive · 30 commitments × \$75K average over 10 years · \$2,250,000

Cost to establish: One planned giving conversation per month (VP Development or Sr. Dir. Advancement time); legacy society collateral; legal/tax consultation as needed. Estimated annual investment: \$5K–\$15K.

ROI: Even the conservative scenario (\$175K over 10 years) against \$5K/year investment = 3.5:1 return. The moderate scenario = 5:1.

Annual Review Checklist

Use this checklist annually to validate and recalibrate the EV model.

- ☐ Update retention rates from actual CRM data (overall, first-time, repeat, major)
- ☐ Recalculate average gift by band from prior-year actuals
- ☐ Count donors by band to validate pyramid ratios
- ☐ Compare forecast to actual contributed revenue; adjust midpoints and response rates
- ☐ Review Platinum and Gold donors individually; update scores
- ☐ Identify new Hidden Platinum candidates (high Capacity, low Engagement)
- ☐ Assess planned giving pipeline (new commitments, matured gifts)
- ☐ Report fundraising efficiency and donor dependency ratios to the board
- ☐ Update this document with current-year benchmarks

Donor Cultivation & Stewardship Guide

A playbook for moving donors through the pipeline — from first contact to planned giving — organized by score band and persona. Designed for Youthfront's development team.

The Donor Lifecycle

Every donor relationship follows a lifecycle. The development team's job is to move people through it — and to prevent attrition at each stage.

“

IDENTIFY !' QUALIFY !' CULTIVATE !' SOLICIT !' STEWARD !' UPGRADE !' (repeat)

!“

PLANNED GIVING

”

Stage · Definition · Key Action · Owner

----- · ----- · ----- · -----

Identify · Name enters the prospect universe · Prospect research; wealth screening; referral from board/donor · Sr. Dir. Advancement

Qualify · Score the prospect using the Donor Scoring Rubric · Apply 4-dimension scoring; assign score band · Development team

Cultivate · Build relationship and deepen affinity · Events, tours, introductions, communications · Assigned relationship manager

Solicit · Make the ask · Personal ask, appeal letter, campaign invitation · VP Development / CEO (major); team (mid-level and below)

Steward · Thank, report impact, deepen trust · Thank-you within 48 hours; impact report; personal touch · Dir. Events & Donor Relations; Manager Donor Relations

Upgrade · Invite increased giving or deeper engagement · Upgrade ask; monthly giving invitation; board recruitment · VP Development

Planned Giving · Secure legacy commitment · Bequest conversation; IRA rollover; legacy society · VP Development / CEO

Cultivation by Score Band

Platinum (90–100): White-Glove Stewardship

Who they are: Board members, top major donors, planned giving commitments. 5–10 people who represent 30–40% of contributed revenue.

Cultivation calendar (per donor):

Month · Touch · Owner

----- · ----- · -----

January · Personal phone call from CEO; New Year acknowledgment · CEO

March · Camp tour or site visit (spring); lunch or dinner with VP Development · VP Development

May · Handwritten note from camp director with summer preview · Camp Sr. Director

July · Mid-year impact update (personalized, not mass mailing) · VP Development

September · Annual impact report with their gift's specific outcomes · Sr. Dir. Advancement

November · Year-end ask (personal, in-person or phone; specific amount) · CEO or VP Development

December · Thank-you within 48 hours of gift; year-end tax receipt · Manager Donor Relations

Stewardship principles:

- Every Platinum donor has a named relationship manager (VP Development or CEO)
- No mass emails. All communication is personal or appears personal
- Annual face-to-face meeting is non-negotiable
- Planned giving conversation is introduced by year 2 of major giving
- Recognition: Legacy society invitation; acknowledgment in annual report (with permission); named campership or program fund (for \$25K+ cumulative)

Gold (75–89): Major Gift Pipeline

Who they are: High-capacity prospects in active cultivation, mid-to-upper major donors (\$5K–\$25K/year), deeply engaged volunteers or church partners with capacity.

Cultivation calendar (per donor):

Quarter · Touch · Owner

----- · ----- · -----

Q1 · Personal thank-you for prior year gift + impact update · Sr. Dir. Advancement

Q2 · Event invitation (major donor dinner, camp open house, or exclusive briefing with CEO) · Dir. Events & Donor Relations

Q3 · Mid-year personal touch (phone call, handwritten note, or small group gathering) · Sr. Dir. Advancement

Q4 · Year-end ask (personal letter or call; specific amount; upgrade from prior year) · VP Development

Stewardship principles:

- Quarterly personal contact (not mass communication)
- Event-driven cultivation: Gold donors should attend at least 2 YF events per year
- Upgrade strategy: Every Gold donor has a documented path to Platinum (what gift size, what engagement milestone, what ask timing)
- Board recruitment pipeline: Gold donors with high Engagement and Affinity scores are the board candidate pool

Silver (60–74): Mid-Level Cultivation

Who they are: Established annual donors (\$1K–\$10K), active camp families, engaged church partners, multi-year volunteers. The "farm team" for Gold.

Cultivation calendar (per segment):

Timing · Touch · Channel

----- · ----- · -----

Post-gift (within 48 hours) · Personalized thank-you (not auto-generated; include one specific impact detail) · Email or

handwritten note

January · Year-in-review impact email with their giving total and what it funded · Email (segmented)

Spring · Invitation to camp open house or Something To Eat packing event · Email + phone for top Silver

Summer · Camp impact story (video or photo story featuring a specific child/family, with permission) · Email

Fall · Mid-level upgrade ask: "Your gift of \$X last year made Y possible. This year, would you consider \$X+20%?" · Direct mail + email

Year-end · Year-end appeal with specific ask amount based on prior giving + 15–25% upgrade · Direct mail + email

Stewardship principles:

- Segmented, not mass. Silver donors receive different messaging than Bronze/Developing
- One personal touch per year from a staff member (phone call, handwritten note, event conversation)
- Upgrade cadence: Ask for 15–25% increase annually; offer monthly giving as an alternative
- Volunteer engagement: Encourage Silver donors to volunteer at an event — this deepens Engagement score and increases retention

Bronze (45–59): Engaged Annual Donors

Who they are: Consistent smaller donors (\$250–\$2,500), newer mid-level prospects, active volunteers who haven't yet given significantly.

Cultivation calendar:

Timing · Touch · Channel

----- · ----- · -----

Post-gift · Thank-you email (personalized template; include one impact metric) · Email

Quarterly · E-newsletter with program stories, event announcements, and giving opportunities · Email

Annually · Year-end appeal with suggested gift amount (based on prior giving history) · Email + direct mail

Annually · One event invitation (camp open house, Something To Eat, community event) · Email

Stewardship principles:

- Consistent, reliable communication — 4–6 touches per year
- Low-cost, high-impact stewardship: thank-you emails, e-newsletter, event invitations
- Identify upgrade candidates: Any Bronze donor who gives 3+ times in a year or increases their gift should be flagged for Silver-level cultivation
- Volunteer pipeline: Bronze donors who volunteer are building Engagement that will increase their score

Developing (30–44): Research and Light Touch

Who they are: New prospects with incomplete data, one-time donors, event attendees who haven't given, wealth-screened names with no relationship.

Cultivation calendar:

Timing · Touch · Channel

----- · ----- · -----

Upon identification · Research to fill data gaps (capacity, affinity, connections) · Internal

Within 30 days · One warm touch: event invitation, volunteer opportunity, or info packet · Email or mail

Quarterly · Include in general e-newsletter · Email

After 6 months · Rescore; if score improved, move to Bronze cultivation; if not, move to Watch · Internal

Stewardship principles:

- Minimal staff time investment — this band is research and automation-driven
- Purpose is data collection and qualification, not solicitation
- One personal touch maximum unless score rises
- Hidden Platinum screening: Flag any Developing donor with Capacity sub-score of 18+ for deeper research

Watch (15–29) and Inactive (0–14): Mass Communication Only

- Include in general e-newsletter and annual appeal (mass, not segmented)
- Do not invest staff time in personal cultivation
- Rescore annually; remove Inactive records after 3 years with no engagement
- Exception: any Watch donor who takes an action (opens email, attends event, volunteers) should be immediately rescored and potentially upgraded

The 48-Hour Thank-You Rule

The single most impactful stewardship practice in nonprofit fundraising is thanking the donor within 48 hours of their gift. Research consistently shows that prompt, personal acknowledgment:

- Increases likelihood of a second gift by 30–40%
- Increases average next gift size by 10–15%
- Is the #1 factor donors cite when asked why they continue giving

Thank-You Tiers

Score Band · Thank-You Method · Timeline · Owner

----- · ----- · ----- · -----

Platinum (90–100) · Personal phone call from CEO + handwritten note from VP Development · Within 24 hours · CEO + VP Dev

Gold (75–89) · Personal phone call from Sr. Dir. Advancement + email · Within 48 hours · Sr. Dir. Advancement

Silver (60–74) · Personalized email from development team + handwritten note for gifts \$5K+ · Within 48 hours · Manager Donor Relations

Bronze (45–59) · Personalized email template (staff signature, one impact detail) · Within 48 hours · Automated + staff review

Developing/Watch · Automated email receipt with thank-you message · Immediate (automated) · System

The First-to-Second Gift Bridge

Converting a first-time donor to a second gift is the highest-leverage moment in the donor lifecycle. National retention of first-time donors is only 19–23%. Youthfront can beat this by:

The 90-Day Conversion Protocol

Day · Action · Purpose

Day 0 · Gift received; auto-receipt sent · Acknowledge

Day 1–2 · Personal thank-you (see tiers above) · Gratitude

Day 14 · Welcome email: "Here's what your gift does" with one specific story · Connect gift to impact

Day 30 · Invitation to an upcoming event or volunteer opportunity · Deepen engagement

Day 60 · Impact update: "Since you gave, here's what happened..." · Reinforce decision

Day 90 · Second ask: smaller than first gift, framed as "join us again" or monthly giving invitation · Convert to repeat donor

Target: Convert 35%+ of first-time donors to a second gift within 12 months (vs. 19–23% industry average).

Upgrade Strategies by Persona

Persona · Current Giving · Upgrade Path · Messaging

Camp Family Champion · \$500–\$2K annual · Camp scholarship fund (\$5K named campership) !' annual fund !' camp capital campaign · "You know what camp does. Help another family experience it."

Church Partner Pastor · \$100–\$2K personal · Church budget line item for YF (\$5K–\$10K) !' pastor's personal major gift · "Your church partnership changes lives. Your personal gift deepens that."

KC Philanthropist · \$10K–\$25K · Named program fund (\$25K+) !' capital gift (\$100K+) !' planned giving · "Your impact is measured in generations, not years."

Neighborhood Builder · \$50–\$500 · Monthly giving (\$25–\$100/month) !' mid-level annual gift (\$1K–\$2,500) · "Every month, your gift feeds families and builds leaders."

Legacy Steward · \$1K–\$10K annual · Planned giving (bequest \$50K+) !' IRA rollover !' legacy society · "Your legacy is Youthfront's future."

Corporate/Foundation · \$5K event sponsorship · Multi-year partnership (\$25K–\$100K/year) !' named program sponsor · "Partner with us for lasting community impact."

Annual Stewardship Calendar (Organization-Wide)

Month · Activity · Target Audience · Owner

January · Year-in-review impact email; tax receipts · All donors · Manager Donor Relations

February · Board giving campaign (100% board participation goal) · Board · Board Chair + CEO

March · Spring camp open house; donor tour · Gold + Silver; Camp families · Dir. Events; Camp Sr. Dir.

April · Something To Eat corporate packing event · Corporate partners; Neighborhood donors · Sr. Dir. Community Programming

May · Mother's Day / family-themed appeal · Family persona donors · VP Development

June · Camp season updates (weekly social/email) · All; emphasis on camp families · Dir. Marketing

July · Mid-year impact update; major donor personal touches · Platinum + Gold · VP Development; CEO

August · End-of-fiscal-year giving push · Major donors · VP Development

September · Annual report release · All donors; board; church partners · Sr. Dir. Advancement

October · Legacy society outreach; planned giving conversations · Platinum + Gold + Legacy Steward persona · VP Development

November · Giving Tuesday campaign · Broad audience; social media focus · Dir. Marketing; Sr. Dir. Advancement

December · Year-end appeal (segmented by score band); personal asks to Platinum/Gold · All donors (segmented) · Full development team

Metrics to Track

Metric · Definition · Frequency · Target

----- · ----- · ----- · -----

Overall retention rate · % of donors who gave last year and gave again this year · Annual · 55%+

First-time donor retention · % of first-time donors who give a second gift within 12 months · Annual · 35%+

Major donor retention · % of \$10K+ donors retained year-over-year · Annual · 80%+

Average gift size · Total contributions ÷ number of donors · Annual · Track trend (increasing = healthy)

Upgrade rate · % of donors who gave more than prior year · Annual · 15%+

Lapsed donor reactivation · % of lapsed donors (2+ years) who give again · Annual · 5–10%

Planned giving commitments · # of documented planned giving intentions · Annual · +3–5 new per year

Thank-you timeliness · % of gifts acknowledged within 48 hours · Monthly · 95%+

Board giving participation · % of board members who gave in the fiscal year · Annual · 100%

Fundraising ROI · \$ raised per \$1 spent on fundraising · Annual · \$7+ : \$1

Relationship Manager Assignments

Based on score band and the development team's capacity:

Role · Score Band Responsibility · # Donors (est.) · Contact Frequency

----- · ----- · ----- · -----

VP Development (Lisen Tammeus Mann) · Platinum (90–100); top Gold (80–89) · 10–15 · Monthly+

CEO (Mike King) · Select Platinum for CEO-level stewardship; board giving · 5–8 · Quarterly+

Sr. Dir. Advancement (Andy Garlich) · Gold (75–89); top Silver (70–74) · 20–30 · Quarterly

Dir. Events & Donor Relations (Michelle Clark) · Silver (60–74) via events; Gold/Platinum event coordination · 50–75 · Event-driven (2–4×/year)

Manager Donor Relations (Lea Ann Roach) · Bronze (45–59); thank-you execution for all bands; data/CRM · 150–300 · Automated + quarterly

Dev. Associate (Ed Garlich) · Church partnerships; creative giving; Neighborhood Builder persona · Varies · Relationship-driven

Messaging Guide

Key messages, voice, and tone inferred from Youthfront's official copy. Use for external communication and content; refine with staff for final approval.

Key messages

1. Mission: Bringing youth into a growing relationship with Jesus Christ.
2. Vision: Let's make a world where everyone belongs.
3. Role: We are a church-assisting organization. We don't replace the church; we resource and partner with congregations.
4. Approach: We create holistic, missional environments for Christian formation—space, time, dialogue, hospitality, and community so that children and youth can discover, explore, and experience God.
5. Neighborhood: We work to unmake the dividing walls for our neighborhoods. Youth and families form friendships across social and economic divisions; strangers become neighbors.
6. Formation: Evangelism and discipleship are a life-long journey. We equip ministry leaders, children, youth, and families to pursue becoming like Jesus Christ.

Voice and tone

- Warm and inclusive — “Everyone belongs”; “strangers become neighbors.”
- Theologically grounded — Scripture, prayer, and the Mission of God are named without jargon; accessible to broad Christian audience.
- Concrete — Use specific programs, places (Argentine, Camp West, Camp LaCygne), and numbers (6,000 youth and families, 200 churches, 350+ households) when helpful.
- Humble and serving — “Learning from the other”; “true empathy and love instead of from a position of superiority”; “assist” not “lead” the church.
- Hopeful — Focus on restoration, belonging, and God's work in the world.

Do

- Use “church-assisting” to describe the org's role.
- Lead with mission or vision in short copy.
- Tie programs to the larger story (formation, belonging, restorative work).
- Cite partnership: individuals, families, youth groups, churches, schools, businesses.

Don't

- Imply Youthfront replaces or competes with the local church.
- Use language that suggests transformation is a “formula” we enact (transformation is the work of the Holy Spirit).
- Overclaim outcomes without stated scale or source.

Taglines / short copy

- “Making strangers into neighbors.”
- “A world where everyone belongs.”
- “Bringing youth into a growing relationship with Jesus Christ.”

- "Holistic, missional environments for Christian formation."

Visual Identity

This section can be populated after running the brand-assets research (Phase 2: logos, color palette, tech stack, prominent images, social links) for the organization. Output from that process is stored under `research/<org>/phase-2-brand-assets/` and can be summarized here for dashboard use.

Placeholder

Run Phase 2 (Brand Assets) of the research process for this organization to gather:

- Logos and wordmarks (with manifest and source URLs)
- Color palette and usage (hex/rgb, where used)
- Prominent website images (hero, program photos, about/team)
- Social media links and optional content snapshot

Once Phase 2 output exists, replace this placeholder with a short visual identity summary: primary and secondary colors, logo usage notes, and links to the asset manifests.

Sources

When populated: `research/<org>/phase-2-brand-assets/` (color-palette, logos-manifest, media-manifest, social-links).

Annual Report (Draft)

Narrative draft for a single fiscal year, built from public financials and program narrative. Not an official annual report; for internal or stakeholder use until the organization publishes one.

Fiscal year in focus

Example: Year ending August 31, 2024 (most recent full year with strong surplus in public data).

Year in summary

Youthfront continued to serve more than 6,000 youth and families through camp and programs and to partner with more than 200 churches. YF Neighborhood's Something To Eat provided monthly food distribution for more than 350 households at the Franklin Center in Kansas City, Kansas, and city-wide meal packing events with Harvesters. YF Family offered counseling, Arise, Teen Parent Connect, and family formation resources. Camp remained a theological playground for contemplation and communion across two properties and more than 1,000 acres.

Financially, the organization reported total revenue of \$5,630,985 and total expenses of \$4,935,796, with a surplus of \$695,189 and net assets of \$6,888,102 (Form 990, ProPublica). Program services represented the majority of expenses. The organization is an ECFA member (since 1990) and holds American Camping Association accreditation (since 2007).

Key figures (FY Aug. 2024)

Metric · Value

----- · -----

Total revenue · \$5,630,985

Total expenses · \$4,935,796

Surplus · \$695,189

Net assets · \$6,888,102

Program services (expense) · \$3,932,095

Management & general · \$478,528

Fundraising · \$525,173

Gratitude

Placeholder: thank donors, churches, volunteers, and partners. Use messaging guide and case for support for language.

Stakeholder Communication Plan (Draft)

Audiences and suggested channels inferred from public materials. For board/staff review and adoption.

Audiences

Audience · Description (from public materials)

----- · -----

Donors · Individuals, families, and organizations who give; ECFA donor contact: Lisen Tammeus Mann (VP Development & Marketing).

Churches · Congregations partnered and trained (200+ a year); youth workers, children's ministers, pastors.

Families · Parents, grandparents, and youth participating in camp, neighborhood, and family programs.

Partners · Youth groups, church groups, schools, businesses; Harvesters (Something To Eat); theological and ministry partners.

Board · 8 members; governance and fiduciary oversight; principal officer Mike King.

Staff · Full-time and seasonal; 38 full-time cited in 2019 press; executive team: CEO, COO, VP Development & Marketing, VP Ministries, EVP Strategic Initiatives.

Suggested channels (inferred)

Audience · Channel · Notes

----- · ----- · -----

Donors · Newsletter, give page, annual report (when published), ECFA profile · "Stay in the know" (newsletter) on site; give.youthfront.com

Churches · Training events, camp partnerships, website (programs, mission/vision) · 200+ churches a year; program and mission pages

Families · Camp and program sign-up, YF Family resources, website, events · Parenting resources, events, courses; counseling

Partners · Website, Local Impact / Something To Eat pages, volunteer opportunities · Meal packing, Service Saturdays, Learning Labs

Board · Board meetings, minutes, financials, 990 summary, strategic materials · Governance docs (e.g. this dashboard)

General public · Website, social (if applicable), press (e.g. Flatland 2019) · Mission, vision, Our Story, contact

Key messages by audience

- Donors: Case for support; impact (6,000+ youth/families, 200+ churches, 350+ households food); ECFA accreditation; give link.
- Churches: Church-assisting role; training and resourcing; camp and neighborhood partnership.
- Families: Formation, belonging, support (counseling, Arise, Teen Parent Connect, parenting).
- Partners: Volunteer opportunities; Something To Eat, ImagineX, Snack Shack; "strangers into neighbors."

This draft is for internal use; refine cadence and ownership with staff.

Market Comps & Alternatives

Cited alternatives Youthfront might consider for AI governance, donor intelligence, and strategy—with pricing, typical timeline/ process, and a graded comparison to Movemental. Research current as of March 2026.

1. Cited comps: agencies and vendors

AI governance, readiness & workflow (nonprofit-focused)

Provider · Service / product · Pricing · Timeline / process · Source

----- · ----- · ----- · ----- · -----

ETSA AI Consulting · NPO Exhale 1-Week AI Upgrade · \$2,994 (50% kickoff, 50% delivery) · 1 week; includes AI ethics doc + board-resolution language; client time: up to 8 hours (1-day intensive or spread across week) · etsaiconsulting.com/pricing (<https://etsaiconsulting.com/pricing/>)

ETSA AI Consulting · NPO AI Advantage Membership · \$625/mo (6-mo min; prepay 6 mo: \$3,600) · Ongoing; quarterly board reports, compliance updates (e.g. Colorado SB205), monthly workflows · etsaiconsulting.com/pricing (<https://etsaiconsulting.com/pricing/>)

Mitchell Consulting · The Snapshot · \$250 · ~1 week; targeted engagement, “Quick Win” doc or 3-step action roadmap · mitchellconsultingsolutions.ca/solutions/pricing-packages (<https://mitchellconsultingsolutions.ca/solutions/pricing-packages/>)

Mitchell Consulting · The Tune Up · Contact · 4–6 weeks; workflow audit, optional AI-readiness checklist or responsible use policy draft, implementation support · mitchellconsultingsolutions.ca/solutions/pricing-packages (<https://mitchellconsultingsolutions.ca/solutions/pricing-packages/>)

Mitchell Consulting · Growth · Contact · 6–10 weeks; full systems audit, stakeholder workshops, optional AI policy draft · mitchellconsultingsolutions.ca/solutions/pricing-packages (<https://mitchellconsultingsolutions.ca/solutions/pricing-packages/>)

Mitchell Consulting · Partner (retainer) · From \$1,000/mo · Ongoing; monthly/bi-monthly strategy, AI policy and onboarding support · mitchellconsultingsolutions.ca/solutions/pricing-packages (<https://mitchellconsultingsolutions.ca/solutions/pricing-packages/>)

Avanzare Labs · AI Essentials / Growth / Impact Optimization · Custom quote · Tiered packages (readiness assessment, training, automation, chatbots; fundraising and content at higher tiers); free AI Readiness Assessment offered · avanzarelabs.com/pricing (<https://www.avanzarelabs.com/pricing>)

Heller Consulting · AI Preparedness Assessment · Contact · Ethical considerations, data strategy, customized AI roadmap · teamheller.com (<https://teamheller.com/what-we-do-technology-strategy/ai-preparedness-assessment>)

Donor intelligence & wealth screening

Provider · Service / product · Pricing · Notes · Source

----- · ----- · ----- · ----- · -----

DonorSearch · Wealth & philanthropic screening · ~\$3,000/year (standard; partners may offer lower) · 40+ data sources; AI-powered modeling; CRM integration · donorsearch.net (<https://www.donorsearch.net/wealth-screening-definitive-guide/>), donorsearch.net/faq (<https://www.donorsearch.net/donorsearch-faq/>)

NPO Authority · Research tools + batch screening · \$1,695–\$3,499/year · Unlimited research tools, training, 1,000–10,000 record batch screening · npoauthority.com/pricing (<https://npoauthority.com/pricing/>)

iWave (Kindsight) · Donor intelligence platform (Starter) · From \$4,150/year · Live profiles, wealth/philanthropic data; Professional from \$5,350; Premium contact · [iwave.com/pricing/](https://www.iwave.com/pricing/) (<https://www.iwave.com/pricing/>)

Nonprofit strategy & strategic planning

Provider · Service · Pricing · Timeline / process · Source

----- · ----- · ----- · ----- · -----

Mission Met (industry norms) · Strategic planning consultant · \$5,000–\$20,000 typical; \$20,000–\$60,000 for 3–4 month comprehensive; \$50,000–\$100,000+ complex/large · Basic: 20–50 consultant hours; comprehensive: 50–150 hours; one-time retreat ~\$3,500 · [missionmet.com/blog/understanding-the-cost...](https://www.missionmet.com/blog/understanding-the-cost-of-hiring-a-strategic-planning-consultant-for-your-nonprofit) (<https://www.missionmet.com/blog/understanding-the-cost-of-hiring-a-strategic-planning-consultant-for-your-nonprofit>)

Visbal Strategic Consulting · Nonprofit strategy · \$160/hr · Project-based · visbalstrategicconsulting.com/pages/rates (<https://visbalstrategicconsulting.com/pages/rates>)

Church / ministry context (faith-based comps)

Provider · Service · Pricing · Timeline · Source

----- · ----- · ----- · ----- · -----

Engagement Group · 360° Strategic Plan · From \$3,600 · 3-week assessment, 56 health areas, strategic roadmap · [engagement.group](https://www.engagement.group/what-we-do/the-360-plan) (<https://www.engagement.group/what-we-do/the-360-plan>)

Discipling Church · Strategic Planning & Organizational Design · \$1,000 one-time · — · [thedisciplingchurch.com/pricing](https://www.thedisciplingchurch.com/pricing) (<https://www.thedisciplingchurch.com/pricing>)

Discipling Church · Revitalization Consulting (200–1,000 attendance) · \$1,000–\$2,000/mo · Ongoing · [thedisciplingchurch.com/pricing](https://www.thedisciplingchurch.com/pricing) (<https://www.thedisciplingchurch.com/pricing>)

2. Typical agency timeline and process

- AI / tech engagements: Often 3–10 weeks (e.g. Mitchell Snapshot 1 week, Tune Up 4–6 weeks, Growth 6–10 weeks). ETSA compresses to 1 week with a fixed 8-hour client commitment.
- Strategic planning: 3–4 months common for small to mid-sized nonprofits; includes discovery, interviews, retreat(s), and plan development. Consultant time often 50–150 hours; larger or multi-consultant engagements can run 6–12 months and \$50K–\$250K.
- Donor intelligence: Usually annual subscription with onboarding (implementation, training) in the first 2–6 weeks; ongoing use rather than a one-time project.
- Governance / policy work: When bundled with strategy or “tune up,” typically 4–10 weeks and multiple touchpoints (discovery, draft, review, revision, board presentation).

3. Graded comparison: quality and personalization vs. Movemental

Movemental is positioned as a consultancy/product built by someone with nonprofit and ministry background, with AI capability layered on—i.e. “meet you where you are” and ministry-aware from day one.

Quality (deliverable quality, methodology, polish)

Option · Est. quality vs. Movemental · Rationale

----- · ----- · -----
Established nonprofit AI agency (e.g. ETSA, Mitchell, Avanzare) · 85–95% · Strong methodology, guarantees, and board-ready outputs; proven playbooks and compliance awareness. Movemental may match or exceed on depth of customization and ministry alignment.

General strategy / church consultant · 70–85% · Good facilitation and strategy; often less specific on AI governance, data, and modern compliance.

Donor intelligence vendor only (e.g. DonorSearch, iWave) · N/A (different product) · Tool/platform; quality is about data and UX, not advisory quality.

***Summary:** A quality agency can be expected to deliver high quality (85–95% of what Movemental would deliver on rigor and polish). The main differentiator is less “quality” than personalization and fit.

Personalization (“meet you where you are,” ministry & nonprofit depth)

Option · Est. personalization vs. Movemental · Rationale

----- · ----- · -----
Established nonprofit AI agency · 50–65% · Nonprofit-savvy and often mission-focused; rarely ministry-formed or theology-aware. Templates and playbooks tend to be generic; learning curve to Youthfront’s language, ECFA, formation, and “church-assisting” context.

Church / ministry consultant · 60–75% · Strong on ministry and formation language; usually weak or no AI governance, data, or modern compliance. Would need to learn AI side.

Movemental · 95–100% (benchmark) · Background in nonprofit and ministry; AI and governance built on that. Designed to meet the org where it is, use its language (VIM, values), and reduce unnecessary process.

***Summary:** Movemental’s edge is personalization—ministry and nonprofit fluency plus AI—not raw deliverable quality. Agencies likely deliver 50–65% of the “meet you where you are” experience for an org like Youthfront.

4. Projected time commitment: Youthfront hours with an agency

Rough estimates for comparison; actuals depend on scope and vendor.

Engagement type · Typical ***consultant*** hours (industry) · Typical ***client*** (Youthfront) hours (est.) · Notes

----- · ----- · -----
Strategic planning (comprehensive) · 50–150 · 40–80+ · Retreats, interviews, review cycles, board prep. Mission Met and similar cite 50–200 consultant hours; client time often 20–50+ for basic, higher for comprehensive.

AI governance + policy (agency) · 20–60 (if bundled) · 15–40 · Discovery calls, review of drafts, board presentation, possibly training. ETSA’s 1-week package asks 8 hours client time; multi-week engagements typically more.

Donor intelligence (vendor) · N/A (vendor-led onboarding) · 5–15 · Training, CRM setup, ongoing use; less “engagement” than tool adoption.

***Conservative range for an agency-led AI governance + light strategy engagement:** 25–50 total Youthfront people-hours (meetings, review, approval, board). More if strategic planning or multiple workstreams are included.

5. Movemental: governance engagement (time and flexibility)

- Format: 1 × 4-hour workshop with leaders (e.g. leadership team and/or board designees).
- Total Youthfront people-time: ~30 combined person-hours (e.g. 6–8 people × ~4 hours, or equivalent).
- Flexibility: Participation can be reduced to 1 representative with authority to act as bridge—someone who can commit the time, make decisions or carry them to the right people, and move the process along. That keeps the ask minimal while still producing adoptable governance (policy + board-ready language).

This is materially less client time than a typical agency-led governance or strategy engagement (25–50+ hours) and is designed to fit an org that cannot spare many leaders for long processes.

6. Three-way comparison: Movemental | Agency (aggregate) | Internal execution

For each product, a side-by-side on price/cost, quality, personalization, and timeline. Internal = Youthfront executes with existing staff (no external vendor).

How the scores are framed

- Quality: Rigor, methodology, board- and accreditor-readiness, and durability of the deliverable. For internal execution, quality is framed honestly: AI tooling is a moving target, governance best practices are still coalescing, and few staff have bandwidth to become experts while doing their day jobs—so output can be solid for internal use but often lower on compliance polish and future-proofing unless the org invests real learning time.
- Personalization: “Meet you where you are,” use of your language (VIM, formation, ECFA), and ministry/nonprofit depth. Internal scores high here: no one knows Youthfront better than Youthfront.

Base / identity & governance hub

· Movemental · Agency (aggregate) · Internal execution

Price / cost · \$8,500–\$14,000 (one-time) · ~\$3,600–\$20,000 (e.g. Engagement 360° at \$3,600; strategy/identity projects 20–60 hrs × \$132–160/hr) · \$2,500–\$6,000 equivalent (40–80 staff hours at ~\$50–75/hr loaded; no cash outlay but real opportunity cost)

Quality · 95–100% (benchmark) · 85–90% (strong methodology; may be generic on ministry) · 55–70% (content will be authentic; structure, completeness, and “single source of truth” discipline depend on who owns it and whether they have time to research, template, and maintain)

Personalization · 95–100% · 50–65% · 95–100% (insider knowledge; risk is consistency and exhaustiveness, not tone)

Timeline / process · Phased research + one round of review; weeks · 3 weeks–3 months depending on scope · 2–4 months if done in fits and starts; can stretch if deprioritized

AI governance & ethics engagement

· Movemental · Agency (aggregate) · Internal execution

Price / cost · \$6,000–\$10,000 (fixed) · ~\$2,994–\$10,000 (ETSA 1-week ~\$3K; Mitchell Tune Up/Growth contact; 20–40 consultant hrs × \$150+) · \$1,500–\$4,500 equivalent (20–60 staff hours: research, drafting, legal/board review; AI policy landscape is dense and shifting)

Quality · 95–100% (benchmark) · 85–95% (proven playbooks, board-resolution language) · 50–65% (AI governance is a “black box” for most orgs: tools change fast, norms and regulation are still forming, and staff rarely have time to master both)

policy and technology. Internal drafts can be sincere and well-intentioned but under-scoped on compliance, data, and minors—or outdated quickly)

Personalization · 95–100% · 50–65% · 95–100% (your values, your programs, your risk tolerance; the gap is expertise, not heart)

Timeline / process · 1 × 4-hour workshop + ~30 org hours (or 1 rep as bridge) · 1–10 weeks; 8–40 client hours · 4–12 weeks if done internally; easy to stall without a dedicated owner

Donor intelligence (setup + first year)

· Movemental · Agency (aggregate) · Internal execution

Price / cost · \$12,000–\$18,000 (setup + year 1) or \$7K–\$10K setup, \$5K–\$8K/yr · ~\$1,695–\$5,350/year (NPO Authority, DonorSearch, iWave Starter); setup/training often included or low · \$3,000–\$8,000 equivalent (subscription to a screening tool \$2K–\$4K + 20–40 hrs to evaluate, implement, and train; building regional dataset in-house is rarely feasible)

Quality · 95–100% (benchmark; regional focus, CRM-aware) · 85–95% (vendor data quality; consulting adds strategy) · 45–60% (tool-only use without strategy; in-house “research” is time-intensive and inconsistent—no match for normalized wealth/philanthropic data)

Personalization · 95–100% (KC regional, ministry context) · 50–60% (generic nonprofit; no ministry lens) · 75–90% (you know your donors; you lack data infrastructure and capacity research)

Timeline / process · Setup + training + defined deliverables · 2–6 weeks onboarding; annual subscription · 4–8 weeks to choose tool and adopt; ongoing use depends on discipline

Content workflow + consistency

· Movemental · Agency (aggregate) · Internal execution

Price / cost · \$4,000–\$7,000 (project) or \$800–\$1,500/mo (ongoing) · ~\$2,500–\$7,000 (messaging/positioning projects; 15–40 hrs × \$150+) or retainer \$1K+/mo · \$2,000–\$5,000 equivalent (20–60 hrs to create messaging guide, case for support, and workflow; ongoing = staff time to maintain)

Quality · 95–100% (benchmark) · 80–90% (professional copy and structure) · 60–75% (voice will be authentic; consistency and “system” require discipline and time many comms teams don’t have)

Personalization · 95–100% · 55–70% · 95–100% (your stories, your theology)

Timeline / process · Project: weeks; ongoing: monthly · 3–8 weeks project; retainers ongoing · 1–3 months if prioritized; ongoing maintenance often slips

AI Leadership journey (advisory)

· Movemental · Agency (aggregate) · Internal execution

Price / cost · \$5,000–\$8,000 (fixed) · ~\$2,994–\$6,000 (ETSA 1-week; or 15–30 hrs strategy × \$150+) · \$0 cash but \$1,500–\$3,500 equivalent (10–25 hrs leadership time to self-facilitate reading, discussion, and prioritization—with no external lens or accountability)

Quality · 95–100% (benchmark) · 80–90% (good facilitation; may lack ministry + AI overlap) · 45–60% (without a guide, “AI journey” often stays high-level or tool-focused; ethics and governance get short shrift; recent deployment of AI means the learning curve is steep and the landscape shifts fast)

Personalization · 95–100% · 50–65% · 90–100% (your priorities, your pace; missing: structure and outside perspective)

Timeline / process · 2–3 workshops + light roadmap · 1–6 weeks · Open-ended; often deprioritized without a partner or deadline

Full dashboard (subscription)

· Movemental · Agency (aggregate) · Internal execution

Price / cost · \$18,000–\$28,000/year · No direct comp (would require piecing: strategy + tech + donor tool + content); rough \$15,000–\$40,000/year in combined retainers and tools · Not realistically feasible (would require fractional CTO, research capacity, and tool build; easily \$50K+ equivalent in labor and still lower integration and coherence)

Quality · 95–100% (benchmark) · N/A (no single integrated product) · N/A (internal build at this scope is out of reach for a ~\$5M org)

Personalization · 95–100% · 50–65% (aggregate of parts) · N/A

Timeline / process · Annual; 2–4 refresh cycles · N/A · N/A

7. Financial value to the organization (projected ROI) by product

Below is an estimated financial value to Youthfront for each product—i.e. what the org might gain in dollars or dollar-equivalent benefit. This supports a simple ROI view: value minus cost.

Product · Est. financial value to Youthfront (annual or one-time) · Why

Base / identity & governance hub · \$3,000–\$8,000/year (ongoing) · Single source of truth reduces duplicated effort, misaligned messaging, and onboarding time; improves grant and donor alignment. Conservative: 15–25 staff hours/year saved + fewer revision cycles and clearer positioning. At \$50–75/hr loaded, that's ~\$750–\$1,900; the rest is from better alignment (donor retention, grant fit).

AI governance & ethics engagement · \$5,000–\$25,000 (one-time risk reduction + ongoing confidence) · Avoided cost of a single reputational or compliance incident; donor and board confidence that AI use is governed; ECFA and partner expectations met. Hard to pin to one number; range reflects “one avoided crisis” or “retained gift from a cautious major donor.”

Donor intelligence (setup + first year) · \$20,000–\$75,000+ (revenue lift) · Direct link to fundraising: better identification and prioritization of capacity, warmer outreach, network mapping. Youthfront contributions ~\$2.9M (FY25); a 1% lift = ~\$29K; 2–3% is plausible with better lead quality and strategy. First-year value often front-loaded as new relationships close.

Content workflow + consistency · \$4,000–\$12,000/year · Time saved on drafting, revision, and approval (e.g. 8–15 hrs/month at \$50–75/hr); stronger, consistent messaging improves response and trust; less rework across channels.

AI Leadership journey (advisory) · \$5,000–\$15,000 (first-year) · Enables better decisions across AI use (efficiency, revenue, ethics); reduces wasted spend on wrong tools or ungoverned experiments; compound effect over time. First-year value from prioritization and avoided missteps.

Full dashboard (subscription) · \$40,000–\$90,000/year (combined) · Sum of the above plus integration premium: one place for identity, donors, content, and AI reduces coordination cost and increases follow-through. Conservative sum of product values; upper end if donor intelligence and governance both pay off strongly.

ROI snapshot (Movemental pricing midpoints)

Product · Movemental cost (midpoint) · Est. value (midpoint) · Implied ROI

Base / identity & governance hub · \$11,250 (one-time) · \$5,500/yr · ~1-year payback if value sustains

AI governance & ethics · \$8,000 · \$15,000 · ~2× value in risk reduction and confidence

Donor intelligence (year 1) · \$15,000 · \$47,500 · ~3× value

Content workflow (project) · \$5,500 · \$8,000/yr · ~1.5× in year one

AI Leadership journey · \$6,500 · \$10,000 · ~1.5×

Full dashboard (year 1) · \$23,000 · \$65,000 · ~2.8×

ROI here is value/cost. Payback period matters for one-time investments (e.g. Base, governance); ongoing products (donor intelligence, content, full dashboard) are evaluated over their lifetime.

Strategic context at the intersection of AI and non-profit priorities, governance, and mission. For demo, presentation, and internal alignment. March 2026.

1. What Youthfront MUST DO on AI

Assuming the organization has done nothing formally on AI to date, the following are non-negotiable from a governance, ethics, and mission perspective.

Governance & accountability

- Adopt a board-level AI stance — Decide how the organization will and will not use AI (scope, limits, who approves). Without this, staff and vendors will make ad hoc choices that can conflict with mission and values (formation, trust, “learning from the other,” theological reflection).
- Define ownership and approval — Clarify who owns AI use (programs, marketing, fundraising, camp, family) and what requires board or leadership approval. Avoid “someone else’s problem” or shadow use (e.g. ChatGPT for donor comms or youth content with no policy).

Ethics & mission alignment

- Align AI use with stated values — Formation is “not a formula we enact,” ministry is “from empathy and love instead of superiority,” and “theological reflection” matters. Youthfront must explicitly decide how AI fits (or doesn’t) into formation, pastoral care, and communication so use doesn’t undercut those commitments.
- Protect minors and vulnerable populations — They serve youth and families (camps, Arise, Teen Parent Connect, counseling). They must have clear rules: no AI making decisions about kids, no putting youth data into public or unvetted AI, and boundaries on AI-generated content that touches formation or care.

Operational and risk basics

- Document what’s in use (or planned) — Inventory current and intended AI use (content, fundraising research, admin, etc.). No policy can be serious without knowing where AI already touches mission, donors, or youth.
- Address donor and accreditor expectations — ECFA and major donors will increasingly expect a stated position on AI (ethics, data, authenticity). Having “nothing” is a growing reputational and trust risk.

Reality-based framing: This isn’t fear; it’s stewardship—protecting mission, minors, and trust while deciding where AI can help (efficiency, revenue, quality) and where it must not go.

2. Priorities in order (importance and urgency)

Priority · Importance · Urgency · Why

----- · ----- · ----- · -----

1. AI governance & ethics (policy + board ownership) · Critical · High · No coherent use or limits without it; mission and formation values are at stake. Board and leadership must own it.

2. Youth and family safety / data boundaries · Critical · High · Minors and vulnerable families; regulatory and moral exposure if AI or data use is ungoverned.

3. Single source of truth for identity and strategy (Base) · High · Medium · One canonical “who we are” improves all downstream work (content, fundraising, AI prompts).
4. Donor intelligence and revenue sustainability · High · High · Deficit and variable contributions; need better lead identification, capacity insight, and network mapping—without violating ethics.
5. Content and messaging consistency · High · Medium · Mission, voice, and theology must be consistent across channels. AI can help only if governed and anchored to the Base.
6. Operational efficiency (time/cost) · Medium · Medium · Staff bandwidth is finite; efficiency gains matter but should follow governance and mission alignment.
7. AI “journey” and adoption roadmap · Medium · Lower · Once governance and safety are in place, a structured adoption path (efficiency ! revenue ! quality ! ethics) makes sense.

Why this order: Governance and youth safety are prerequisites; donor intelligence and sustainability are immediate given the numbers; Base and content are multipliers for everything else, including ethical AI use.

3. Pain points (articulated or not) at the AI Kairos

- No shared “who we are” — Identity and strategy live in many places. That makes it hard to brief staff, vendors, or AI consistently—and to judge whether AI output is on-mission.
- Revenue pressure with unclear donor strategy — Deficit and variable contributions; likely feeling under-resourced in development. Pain: “We need more and better donor relationships but don’t have a clear, ethical system to find and prioritize them.”
- Formation vs. “formula” tension — They explicitly resist formulaic ministry. Unstated pain: “If we use AI for content or communication, does that make us formulaic? How do we use tools without betraying our values?”
- Scattered governance artifacts — Strategic plan, theory of change, outcomes are inferred or draft. Pain: “We don’t have one place where strategy and governance live, so board and staff alignment is harder—and we can’t easily feed that into tools or policies.”
- Risk and compliance anxiety — ECFA, donors, and possibly camps/schools will ask about AI and data. Pain: “We don’t know what we’d say or what we’ve already allowed.”
- Capacity and bandwidth — Small leadership team; many programs. Pain: “We can’t add a huge AI project; we need something that meets us where we are and doesn’t require a full-time AI owner.”
- Trust and authenticity — Values stress trust and “true empathy.” Pain: “If we use AI to write or research, are we being authentic with donors and youth?”

4. Product offerings implied by this dashboard

How the dashboard’s capabilities map to pain points and priorities:

Implied product · What it is · Pain points addressed · Priority alignment

----- · ----- · ----- · -----

Base / identity & governance hub · Single place for VIM, History, mission, vision, values, strategy, board, 990, program inventory, outcomes, messaging—sourced from research and refined with the org. · No shared “who we are”; scattered governance; need to anchor AI and content. · #3 (single source of truth).

AI governance & ethics engagement · Prompts and workflows that produce draft AI policies, ethics guidelines, and governance language the org can approve, edit, and own. Dashboard as collaboration surface. · Governance and ethics gap; donor/ECFA expectations; formation vs. formula. · #1 (AI governance).

Donor intelligence / fundraising · Regional wealth/prominence data, cross-reference of leads, search, (future) deep-dive research and network mapping, CRM-oriented UI. · Revenue pressure; need better donor discovery and prioritization. · #4 (donor intelligence).

Content workflow & consistency · Content section plus governance docs (messaging guide, stakeholder comms, case for support) so content is created and reviewed in one place, aligned to Base. · Messaging consistency; content volume without losing voice. · #5 (content).

AI Leadership journey (advisory + tools) · The AI Leadership area as accompaniment: help them decide use cases, document concerns, and get custom tools built. · Capacity; need a guided path, not a DIY project. · #6–7 (efficiency, adoption roadmap).

Full dashboard (subscription or license) · All of the above in one operating system: Base + Donors + Content + AI Leadership + prompt-driven governance, with ongoing updates and refinement. · Multiple pains at once; one place for identity, donors, content, and AI. · All.

5. Fair pricing (consulting guidance, not hourly)

For an org of Youthfront's size (~\$5M revenue, ECFA-accredited, regional faith-based). Value-based and fixed-scope, not hourly.

Product · Suggested range · Deliverables / notes

----- · ----- · -----

Base / identity & governance hub · \$8,500–\$14,000 (one-time) · OSINT/research phases, VIM + History + key governance docs in one place, one round of review with staff/board.

AI governance & ethics engagement · \$6,000–\$10,000 (fixed) · Draft AI use policy + ethics guidelines + (optional) board one-pager; 1–2 workshops; revision until adoption.

Donor intelligence (setup + first year) · \$12,000–\$18,000 (or setup \$7K–\$10K, then annual \$5K–\$8K) · Regional dataset, cross-reference/search UI or CRM integration, training, set number of deep dives or network maps.

Content workflow + consistency · \$4,000–\$7,000 (project) or \$800–\$1,500/month (ongoing) · Project: messaging guide, case for support, content inventory, workflow. Ongoing: maintenance, prompt runs, doc updates.

AI Leadership journey (advisory) · \$5,000–\$8,000 (fixed) · 2–3 workshops (efficiency, revenue, quality, ethics); use-case prioritization; light roadmap; optional follow-on.

Full dashboard (subscription) · \$18,000–\$28,000/year · Base refreshed, donor intelligence, content workflow, AI Leadership area, governance/ethics prompt library, 2–4 refresh cycles per year.

How to charge: Fixed scope per product; milestone-based for large projects (e.g. 50% at kickoff, 50% at delivery); annual fee for ongoing value (donor intelligence, full dashboard). Optional small retainer (\$1K–\$2K/month) for governance and content support.

What This Directory Contains

File · Purpose

----- · -----

stakeholder-registry.md (stakeholder-registry.md) · The canonical list of all Youthfront stakeholders with compiled profiles (identity, affiliations, LinkedIn data, enrichment notes)

kc-power-network.md (kc-power-network.md) · LittleSis-derived network clusters, top prospect connection targets, and the KC power landscape these stakeholders are mapping into

connection-scoring.md (connection-scoring.md) · Relationship type taxonomy, strength scoring rubric, and approach strategy framework

research-gaps.md (research-gaps.md) · What's known vs. unknown for each stakeholder, and what requires human input

What Is a Stakeholder?

A Youthfront Stakeholder is anyone in Youthfront's inner orbit whose existing relationships can become bridges to new donors. The stakeholder group includes:

- Board members (9) — governance leaders who can make peer introductions
- Executives (2) — CEO and EVP with institutional authority and external networks
- Key staff (6) — program leaders with community, church, and professional networks
- Major donors — individuals with \$5K+ lifetime giving (not yet added to registry)
- Church partners — pastors and youth directors at 200+ partner churches (not yet added)
- Volunteers — camp staff and program volunteers with deep relational networks (not yet added)

The registry starts with 17 known stakeholders (board + executives + key staff) and is designed to grow as connection mapping discovers "hidden stakeholders" — people whose network position makes them high-value connectors even if they weren't previously identified.

How This Feeds the Platform

Connection maps produced by the /stakeholder-map skill are written to:

``

public/data/stakeholder-connections/{stakeholder-id}.json (per-stakeholder)

public/data/stakeholder-connections/_graph.json (master graph)

``

These files are consumed by the Youthfront donor platform's Connections page and the Donor Intel Assistant agent for cultivation path recommendations.

Key Principle

The YF stakeholder table is the highest-ROI investment in the entire system.

Every new affiliation added to a stakeholder creates new potential matches against all 23,782 prospects. A \$0 phone call with a board member who says "I play golf with him every Thursday" is worth more than \$500 in API searches.

Connection mapping is only as good as the internal network you're mapping *to*.

Board Members (9)

Tim Smith — Board Chair

Field · Value

----- · -----

ID · ins-tim-smith

Role · Board Chair

Title · President, Non Profit DNA

Location · Kansas City, MO

LinkedIn · timothysmithnpo (<https://www.linkedin.com/in/timothysmithnpo/>) — 500+ connections, 1,867 followers

Sources · Form 990, GuideStar, LinkedIn

Summary: Board chair with 30+ years of NPO fundraising leadership. Former Youthfront VP of Development (1996-2000) — deep institutional knowledge. Author of "Donors Are People Too." CDO-level experience at Museum of the Bible and Food for the Hungry. Nationally recognized authority in faith-based fundraising.

Affiliations:

Organization · Role · Type · Status · Period

----- · ----- · ----- · ----- · -----

Non Profit DNA · President · employer · active · 2000–present

Youthfront · Board Chair · board · active · current

Museum of the Bible · Former CDO · employer · historical · 2014–2017

Food for the Hungry, Inc. · Former CDO · employer · historical · 2011–2014

YouthFront · Former VP Development · employer · historical · 1996–2000

Phoenix Seminary · Former VP Development · employer · historical · 1992–1996

Liberty University · Masters of Religion · academic · completed · —

LinkedIn Intelligence:

- Headline: "Non Profit Leader, Training the next generation of fundraisers, Cancer survivor"
- Skills: Fundraising (99+ endorsements), Direct Marketing
- Publications: "Donors Are People Too" (book), articles on donor motivation and COVID ministry leadership
- Enrichment notes: High-value board chair for donor strategy. Consulting practice (Non Profit DNA) means his client network likely overlaps significantly with the prospect database — NPO leaders across the country.

Connection mapping value: VERY HIGH — 26 years in NPO fundraising leadership across multiple organizations means extensive network of nonprofit executives, major donors, and foundation contacts. His consulting clients are a hidden asset.

Cheryl Reinhardt — Vice Chair

Field · Value

----- · -----

ID · ins-cheryl-reinhardt

Role · Vice Chair

Title · Corporate Counsel, Zephyr Products

Location · Overland Park, KS

LinkedIn · cheryl-reinhardt (<https://www.linkedin.com/in/cheryl-reinhardt/>) — 500+ connections, 780 followers

Sources · Form 990, GuideStar, LinkedIn

Summary: Attorney with 34 years at Zephyr Products. Deep Youthfront connection — directed Something to Eat program (2013-2017). Federal court law clerk. KU Law Order of the Coif (top 10%). Self-describes as "passionate connector and philanthropist."

Affiliations:

Organization · Role · Type · Status · Period

Zephyr Products, Inc · Corporate Counsel · employer · active · 1992–present

Youthfront · Vice Chair · board · active · current

Youthfront · Director, Something to Eat · employer · historical · 2013–2017

Beal & Reinhardt LLC · Partner and Attorney · employer · historical · 2011–2013

Judge Earl O'Connor, USDC Kansas · Law Clerk · employer · historical · 1992–1996

Stinson Morrison Hecker · Summer Associate · employer · historical · 1991

University of Kansas School of Law · JD (Order of the Coif) · academic · completed · 1992

University of Missouri-Columbia · BS Finance and Economics · academic · completed · 1984

LinkedIn Intelligence:

- Headline: "Passionate connector and philanthropist"
- Honors: Order of the Coif, Law Review, Phi Kappa Phi
- Enrichment notes: Legal expertise + program knowledge = rare board combination. Federal court clerkship suggests high-caliber professional network. "Passionate connector" self-description is literally what connection mapping needs.

Connection mapping value: HIGH — Legal/corporate network (34 years at one company), KU Law alumni network, federal judiciary connections, and self-identified connector personality.

Dean Blevins — Board Member

Field · Value

----- · -----

ID · ins-dean-blevins

Role · Board Member

Title · Professor of Practical Theology, Nazarene Theological Seminary

Location · Kansas City, MO

LinkedIn · dean-blevins-76ba823 (<https://www.linkedin.com/in/dean-blevins-76ba823/>) — 500+ connections, 2,827 followers

Sources · Form 990, GuideStar, LinkedIn

Summary: Longest-serving board member — 19 years (since 2007). PhD from Claremont. NTS professor for 20 years. Editor of Didache journal. Specialties in youth culture, children's spirituality, and neuroeducation.

Affiliations:

Organization · Role · Type · Status · Period

Nazarene Theological Seminary · Professor of Practical Theology · employer · active · 2005–present

Youthfront · Board of Directors · board · active · 2007–present

Asbury Theological Seminary · Affiliate Faculty · employer · active · 2005–present

Church of the Nazarene · Discipleship Consultant · employer · active · 1996–present

Trevecca Nazarene University · Endowed Chair / Professor · employer · historical · 1994–2005

Claremont School of Theology · Ph.D. · academic · completed · 1999

Nazarene Theological Seminary · M.R.E. · academic · completed · 1991

LinkedIn Intelligence:

- Skills: Theology (99+ endorsements), Practical Theology
- Specialties: Christian Discipleship, Missional Theology, Youth Culture & Ministry, Children's Spirituality, Neuroeducation, Transformational Leadership
- 2,827 followers — strong academic/ministry influence network
- Enrichment notes: Academic authority across multiple seminaries and denominations. National network in theological education.

Connection mapping value: MODERATE — Academic/theological network is deep but narrow. Highest value is connecting to faith-based foundation leaders and seminary-adjacent donors. 30-year Nazarene denomination relationship is a broad network.

Aaron Mitchum — Board Member

Field · Value

ID · ins-aaron-mitchum

Role · Board Member

Title · Owner, Analog Counseling & Consulting

Location · Overland Park, KS

LinkedIn · aaronmitchum (<https://www.linkedin.com/in/aaronmitchum/>) — 500+ connections, 754 followers

Sources · Form 990, GuideStar, LinkedIn

Summary: Board member since 2019. Owns Analog Counseling & Consulting. Also on the Brookhaven Institute board. MA Counseling from MidAmerica Nazarene. Former Youthfront Teen Staff Director. Active voice on trauma-informed leadership.

Affiliations:

Organization · Role · Type · Status · Period

----- · ----- · ----- · ----- · -----

Analog Counseling & Consulting · Business Owner · employer · active · 2016–present

Youthfront · Board Member · board · active · 2019–present

Brookhaven Institute for Psychoanalysis and Christian Thought · Board Member · board · active · 2023–present

MidAmerica Nazarene University · MA Counseling · academic · completed · 2022

MidAmerica Nazarene University · BA Biblical Studies · academic · completed · —

Brookhaven Institute · Certificate, Psychoanalysis · academic · completed · —

LinkedIn Intelligence:

- Headline: "Business Owner | MA in Counseling"
- About: Focuses on psychological safety and personal growth. Psychodynamic therapy and organizational psychology.
- Skills: Program Management, Event Planning, Creative Problem Solving
- Former Teen Staff Director/Curriculum Developer at Youthfront
- Enrichment notes: Counseling/org-psych expertise, active LinkedIn presence on trauma-informed leadership and workplace mental health.

Connection mapping value: MODERATE — Counseling/mental health professional network, Overland Park business community, Brookhaven Institute board overlap potential.

Ed Garlich — Board Member + Staff

Field · Value

----- · -----

ID · ins-ed-garlich

Role · Board Member (also staff — Creative Giving Advisor)

Title · Insurance Broker, Rich & Cartmill / Creative Giving Advisor, Youthfront

Location · Kansas City Metropolitan Area

LinkedIn · ed-garlich-9025218 (<https://www.linkedin.com/in/ed-garlich-9025218/>) — 258 connections, 266 followers

Sources · Form 990, GuideStar, LinkedIn

Summary: 26 years on the Youthfront board (1999-2025) plus 14 years as Creative Giving Advisor. Insurance background at Rich & Cartmill and Federated Insurance. Dual board/staff role gives unique governance and operations perspective.

Affiliations:

Organization · Role · Type · Status · Period

Youthfront Inc · Creative Giving Advisor · employer · active · 2012–present

Youthfront · Board of Directors · board · active · 1999–2025

Federated Insurance · Senior Marketing Rep · employer · historical · 1988–2011

Missouri State University · BS Business/Political Science · academic · completed · 1974

LinkedIn Intelligence:

- Volunteering: Board of Directors, Youthfront, 26 yrs 4 mos — "Christian Youth Camps"
- Education: Sigma Chi Fraternity member (Missouri State)
- Enrichment notes: Insurance industry background (Rich & Cartmill, Federated) provides commercial network. Sigma Chi alumni network is an untapped social connection.

Connection mapping value: HIGH — 26 years of Youthfront relationships means Ed likely knows every major donor personally. Insurance broker role means extensive KC business network. Sigma Chi fraternity is a potential social connector. "Creative Giving Advisor" title means he's already the person making donor introductions.

Tina Harris — Board Member

Mike King — Board Member + CEO/President

Field · Value

----- · -----

ID · ins-mike-king

Role · Executive (also Board Member)

Title · President/CEO, Youthfront

Location · Kansas City, MO

LinkedIn · mike-king-685b925 (<https://www.linkedin.com/in/mike-king-685b925/>) — 500+ connections, 2,117 followers

Sources · Form 990, GuideStar, LinkedIn

Summary: Principal officer per IRS 990. Dual MA degrees — Theology (Nazarene Theological Seminary, 2015) and Counseling/Psychology (Liberty University). 2,100+ LinkedIn followers.

Affiliations:

Organization · Role · Type · Status · Period

----- · ----- · ----- · ----- · -----

YouthFront · President/CEO · employer · active · current

Youthfront · Board Member · board · active · current

Nazarene Theological Seminary · M.A. Theology (2015) · academic · completed · 2015

Liberty University · M.A. Counseling and Psychology · academic · completed · —

LinkedIn Intelligence:

- Headline: "President/CEO at Youthfront"

- Skills: Church Events, Religion
- Interests: Liberty University, John Templeton Foundation
- Enrichment notes: Dual MA degrees (theology + counseling) suggest depth in both pastoral leadership and organizational psychology. CEO role gives him authority for peer-to-peer meetings with other executives.

Connection mapping value: VERY HIGH — CEO credibility for peer-level meetings with corporate executives and foundation leaders. 500+ LinkedIn connections and 2,100+ followers indicate broad professional network. NTS and Liberty alumni networks. Interest in John Templeton Foundation suggests familiarity with faith/science philanthropy space.

Executives (1 additional beyond Mike King)

Topher Philgreen — EVP Strategic Initiatives

Field · Value

----- · -----

ID · ins-topher-philgreen

Role · Executive

Title · EVP Strategic Initiatives / COO, Youthfront

Location · Mission, KS

LinkedIn · topher-philgreen-4490276 (<https://www.linkedin.com/in/topher-philgreen-4490276/>) — 422 connections, 426 followers

Sources · LinkedIn

Summary: Longest-tenured employee — 39 years (since 1986). COO and EVP Strategic Initiatives. Also an investor and private lender. Institutional memory of the entire organization.

Affiliations:

Organization · Role · Type · Status · Period

----- · ----- · ----- · ----- · -----

Youthfront · EVP Strategic Initiatives · employer · active · 1987–present

Youthfront · COO · employer · active · 1986–present

MidAmerica Nazarene University · Alumni · academic · completed · —

LinkedIn Intelligence:

- Headline: "Executive Vice President Strategic Initiatives at Youthfront — Investor, Private Lender"
- Enrichment notes: "Investor, Private Lender" in headline suggests personal wealth and financial/real estate network beyond Youthfront. 39 years means he has likely interacted with every significant donor in Youthfront's history.

Connection mapping value: HIGH — 39 years of institutional relationships. Investor/lender side suggests connections in KC real estate and finance. MidAmerica Nazarene alumni network shared with several other stakeholders.

Key Staff (6)

Lisen Tammeus Mann — VP Development & Marketing

Field · Value

----- · -----

ID · ins-lisen-tammeus-mann

Role · Staff

Title · VP Development & Marketing, Youthfront

Location · Kansas City area (presumed)

LinkedIn · Not found

Sources · ECFA

Summary: Donor contact per ECFA member profile. VP Development & Marketing. LinkedIn profile not located.

Connection mapping value: POTENTIALLY VERY HIGH — As VP of Development, she is the primary donor-facing executive. Her professional network is likely the most directly relevant to connection mapping. The lack of LinkedIn data is a critical gap.

Alex Mathew — Director, Youthfront Pathways

Field · Value

----- · -----

ID · ins-alex-mathew

Role · Staff

Title · Director, Youthfront Pathways

Location · Kansas City, KS

LinkedIn · alex-mathew-75765167 (<https://www.linkedin.com/in/alex-mathew-75765167/>) — 500+ connections, 1,787 followers

Sources · LinkedIn

Summary: Former Youth For Christ Executive Director (7 years). Jackson County Detention Chaplain (11 years). Former CHWC board member. MS in Organizational Development.

Affiliations:

Organization · Role · Type · Status · Period

----- · ----- · ----- · ----- · -----

Youthfront · Director, Pathways · employer · active · 2024–present

Circuit Court of Jackson County, MO · Detention Chaplain · employer · active · 2015–present

Youth For Christ USA Inc. · Former Executive Director · employer · historical · 2017–2024

CHWC, Inc. (Community Housing of Wyandotte County) · Former Board Member · board · historical · 2013–2018

The Urban Scholastic Center · Former Associate Director · employer · historical · 2009–2014

Calvary Bible College · MS Organizational Development · academic · completed · 2014

Calvary University · BA Organizational Leadership · academic · completed · 2008

LinkedIn Intelligence:

- About: "I want to use my life and profession to positively impact youth and families living in the urban areas of Kansas City."
- 500+ connections with 1,787 followers — strong network
- Enrichment notes: Former YFC Executive Director brings major nonprofit leadership network. Concurrent Jackson County role means justice system connections. CHWC board = housing/community development network.

Connection mapping value: HIGH — Broadest external network among staff. YFC national network, Jackson County government, Wyandotte County community development, and urban ministry circles.

Matt Saunders — Senior Director of Camps

Field · Value

----- · -----

ID · ins-matt-saunders

Role · Staff

Title · Senior Director of Camps, Youthfront

Location · Kansas City Metropolitan Area

LinkedIn · matthew-w-saunders (<https://www.linkedin.com/in/matthew-w-saunders/>) — 200 connections, 204 followers

Sources · LinkedIn

Summary: 13+ years at Youthfront in camp operations. Adjunct at MidAmerica Nazarene. Published board game designer. Deep church youth ministry background.

Affiliations:

Organization · Role · Type · Status · Period

----- · ----- · ----- · ----- · -----

Youthfront · Senior Director of Camps · employer · active · 2022–present

MidAmerica Nazarene University · Adjunct Instructor · employer · active · 2025–present

Indian Creek Community Church · Former Director of Student Ministries · employer · historical · 2005–2012

Baker University · MLA, History · academic · completed · 2019

Northwest Nazarene University · BA Youth Ministry · academic · completed · 1997

LinkedIn Intelligence:

- About: Summer camp director and published board game designer. Consultant for game-based learning, camp programming, and youth ministry.
- Enrichment notes: Direct relationships with camp families = prospect identification pipeline. Church youth ministry background across Nazarene churches in Idaho, Canada, Kansas.

Connection mapping value: MODERATE — Camp family relationships are warm but lower-capacity. Indian Creek Community Church connection (7 years) could overlap with Olathe/south JoCo prospects.

Joseph Gonzales — Youth Pastor

Field · Value

----- · -----

ID · ins-joseph-gonzales

Role · Staff

Title · Youth Pastor, Youthfront

Location · Kansas City Metropolitan Area

LinkedIn · joseph-gonzales-64462b77 (<https://www.linkedin.com/in/joseph-gonzales-64462b77/>) — 87 connections, 88 followers

Sources · LinkedIn

Summary: Rosebud Sioux Tribe member. M.Div. from Nazarene Theological Seminary. Works in Argentine neighborhood (inner-city KCK). Leads Snack Shack KC and summer apprentice program. Community partnerships with Avenue of Life and Harvesters.

Affiliations:

Organization · Role · Type · Status · Period

----- · ----- · ----- · ----- · -----
Youthfront · Youth Pastor · employer · active · 2021–present

Pineville Church of Nazarene · Former Pastor · employer · historical · 2019–2021

Fremont Nazarene Church · Former Pastor · employer · historical · 2016–2019

Shelterwood · Former Direct Care Staff · employer · historical · 2013–2014

Nazarene Theological Seminary · M.Div. · academic · completed · 2017

Southern Nazarene University · BS Theology · academic · completed · 2011

Connection mapping value: LOW for high-capacity donors — neighborhood ministry network is community-focused, not wealth-adjacent. HIGH for church partner connections and Indigenous community bridges.

Megan Fountain — Coordinator, Youth Ministry with Teen Parents

Field · Value

----- · -----
ID · ins-megan-fountain

Role · Staff

Title · Coordinator of Youth Ministry with Teen Parents, Youthfront

Location · Kansas City, KS

LinkedIn · megan-fountain-b830ba209 (<https://www.linkedin.com/in/megan-fountain-b830ba209/>) — 142 connections, 142 followers

Sources · LinkedIn

Summary: 14+ years in KCK's Latinx community. Bilingual Spanish/English. MA Music Therapy (UMKC). Former Mission Adelante director (12 years). Former YFC Parent Life director. Self-funded for 12 years — donor relations experience.

Affiliations:

Organization · Role · Type · Status · Period

----- · ----- · ----- · ----- · -----

Youthfront · Coordinator, Teen Parents · employer · active · 2024–present

Youth for Christ: Parent Life · Former Director · employer · historical · 2021–2024

Mission Adelante · Former Director · employer · historical · 2009–2021

Blue Valley School District · Former Spanish Teacher · employer · historical · 2007–2009

University of Missouri-Kansas City · MA Music Therapy · academic · completed · 2007

Belmont University · BA Spanish + BA Music Education · academic · completed · 2003

LinkedIn Intelligence:

- About: "Highly proficient, cross-cultural educator with a heart for people from all places."
- Self-funded for 12 years at Mission Adelante = personal donor network
- Enrichment notes: 12 years self-funded means she has cultivated her own donor base — those donors are potential YF donors too.

Connection mapping value: MODERATE — Her personal donor network from 12 years of self-funding is a hidden asset. Mission Adelante and YFC networks provide cross-ministry connections. Blue Valley School District = south JoCo parent network.

Carrie Hackett — Director of Program Administration

Field · Value

----- · -----

ID · ins-carrie-hackett

Role · Staff

Title · Director of Program Administration, Youthfront

Location · Kansas City, KS

LinkedIn · carrie-hackett-241a89237 (<https://www.linkedin.com/in/carrie-hackett-241a89237/>) — 27 connections, 27 followers

Sources · LinkedIn

Summary: Program administration leadership. ASL certification. BS in Merchandising, Marketing, Business from NW Missouri State.

Affiliations:

Organization · Role · Type · Status · Period

----- · ----- · ----- · ----- · -----

Youthfront · Director of Program Administration · employer · active · current

Johnson County Community College · Certificate, ASL · academic · completed · 2015

Northwest Missouri State University · BS Merchandising, Marketing, Business · academic · completed · 2001

Connection mapping value: LOW — Minimal external network based on available data. 27 LinkedIn connections. Primarily internal-facing role.

Fletch Kelly — Director of Facilities and Maintenance

Field · Value

----- . -----

ID · ins-fletch-kelly

Role · Staff

Title · Director of Facilities and Maintenance, Youthfront

Location · Louisburg, KS

LinkedIn · fletch-kelly-91731b86 (<https://www.linkedin.com/in/fletch-kelly-91731b86/>) — 271 connections, 271 followers

Sources · LinkedIn

Summary: 25+ years at Youthfront facilities. Prior GM assembly (11 years) and excavation management (13 years). Endorsed for Youth Ministry by Mike King — more than a facilities role.

Affiliations:

Organization · Role · Type · Status · Period

----- . ----- . ----- . ----- . -----

Youthfront · Director of Facilities · employer · active · 2000–present

Bob Schmid Foundations and Excavation · Shop/Equipment Manager · employer · historical · 1987–2000

General Motors · Assembly Repair · employer · historical · 1976–1987

Connection mapping value: LOW for donor connections — primarily operational role. Louisburg, KS community connections may have some local value.

Former Board Member (noted)

Lou Francis — Former Treasurer

- Served as Treasurer per FY 2024 Form 990
- Not listed in current roster
- Not yet in stakeholder registry
- Recommendation: Add if still connected to Youthfront — former board treasurers often maintain donor relationships

Registry Statistics

Category · Count · With LinkedIn · LinkedIn Not Found

----- . ----- . ----- . -----

Board members · 9 · 6 · 3 (Tina Harris, Jeanette Thomas, Jeff Smith)

Executives · 2 · 2 · 0

Key staff · 6 · 5 · 1 (Lisen Tammeus Mann)

Total · 17 · 13 · 4

Connection Mapping Priority Tiers

Tier 1 — Research first (highest bridge potential):

- Tim Smith (Board Chair — NPO fundraising network, consulting clients)
- Mike King (CEO — executive peer network, 2,100+ followers)
- Cheryl Reinhardt (Vice Chair — legal/corporate network, self-described "connector")
- Ed Garlich (26-year insider — knows every major donor, insurance network)

Tier 2 — Research next (strong but narrower networks):

- Topher Philgreen (39-year tenure, investor/lender)
- Alex Mathew (YFC network, Jackson County, 1,787 followers)
- Dean Blevins (academic/theological network, 2,827 followers)
- Lisen Tammeus Mann (VP Development — critical role, but no LinkedIn data)

Tier 3 — Research when Tier 1-2 complete:

- Aaron Mitchum (counseling/business network)
- Megan Fountain (personal donor network from self-funding)
- Matt Saunders (camp family network, Indian Creek Church)

Tier 4 — Low priority or requires human input first:

- Joseph Gonzales (community ministry, limited high-capacity connections)
- Carrie Hackett (minimal external network)
- Fletch Kelly (operational role)
- Tina Harris (no data — needs human input)
- Jeanette Thomas (no data — needs human input)
- Jeff Smith (no data — needs human input)

KC Power Network — Connection Targets

Purpose: The landscape of high-value individuals and organizations that stakeholder connections are mapping *into*. These are the people and clusters where discovering a bridge from a YF stakeholder creates actionable cultivation paths.

Sources: LittleSis API (139 relationship records, 11 seed entities), OpenFEC, enriched top prospects (71 profiles), 990 officer cross-reference (964 officers)

Last updated: 2026-03-22

Network Clusters

Four distinct power clusters emerged from the LittleSis harvest. Each represents a group of interconnected individuals who share social, professional, and philanthropic ties. A single stakeholder connection into any cluster can unlock multiple prospects.

Cluster 1: Leawood/Mission Hills Financial Elite

Connectors: Clifford Illig, Charles Laue, Gregory Aron, Mark O'Connell, Jonathan Baum, Bill Ryan, Adam Aron, Lamar Hunt Jr.

Shared traits: Corporate executives and investors, \$100K+ political giving, likely shared social circles (country clubs, galas), Leawood/Mission Hills/Overland Park geography.

Top prospects in this cluster:

Name · Score · City · Capacity Signal · YF Relevance

----- · ----- · ----- · ----- · -----

Clifford Illig · 71 · Leawood · Cerner co-founder, \$500M+ est. · VERY HIGH — active philanthropist, children's welfare focus

Mark O'Connell · 71 · Leawood · Chairman MSTs, \$451K political giving · MEDIUM

James Hebenstreit · 68 · Kansas City · Chairman Alaris Capital, \$891K political giving · HIGH — Linda Hall Library trustee

Marilyn Hebenstreit · 68 · Kansas City · CEO Alaris Capital, \$648K political giving · HIGH — Linda Hall Library Board Chair

Bill Ryan · 68 · Overland Park · Shamrock Trading founder/CEO, \$584K political giving · MEDIUM — \$1M gift to K-State

Charles Laue · 68 · Leawood · Vice Chairman Asurion, \$285K political giving · LOW — animal welfare focus

Adam Aron · — · Leawood · AMC CEO, \$200K+ bipartisan giving · MEDIUM

Gregory Orman · — · — · Self-made entrepreneur, \$3.5M+ political giving · MEDIUM — community-minded

Bridge hunting priority: Look for stakeholder connections through country clubs, Johnson County civic organizations, KC Chamber, and corporate board overlaps.

Cluster 2: KC Foundations & Philanthropy

Connectors: Julia Kauffman, Hall family, DeBruce, Nutter, KC Community Foundation board

Shared traits: Foundation leadership, arts patronage, established philanthropic patterns, multi-generational KC philanthropic families.

Key entities:

Entity · Assets · Key Person · Connection Angle

----- · ----- · ----- · -----
Ewing Marion Kauffman Foundation · \$2.4B · — · Entrepreneurship + youth programming overlap

Muriel McBrien Kauffman Foundation · \$271M · Julia Kauffman (Chair/CEO) · Mission Hills, \$494K+ political giving

Hall Family Foundation (Hallmark) · \$1.03B · Adele M. Hall · KC institution, Crown Center, arts

KC Community Foundation · — · Board members · Central hub for KC philanthropy

Top prospects:

Name · Score · Capacity Signal · YF Relevance

----- · ----- · ----- · -----
Julia Kauffman · 68 · \$527K political giving, Kauffman Foundation chair · HIGH — KC's #1 philanthropic family

Bridge hunting priority: Foundation board overlaps, arts patronage circles (Nelson-Atkins, Kauffman Center), and faith-adjacent philanthropy connections.

Cluster 3: Banking/Finance Dynasty

Connectors: David W. Kemper, John W. Kemper, Mariner Kemper, Crosby Kemper III

Shared traits: Multi-generational banking family, bipartisan political engagement (\$50K+ over 30 years), extensive board memberships at cultural and educational institutions.

Key network map:

David W. Kemper (Commerce Bancshares Chairman/CEO since 1991)
% % % John W. Kemper (son) — President/CEO, Commerce Bancshares
% % % Ellie Kemper (daughter) — Actress
% % % Mariner Kemper (relation) — Chairman/CEO, UMB Financial
% % % Crosby Kemper III (relation) — Exec Dir, KC Public Library; former UMB CEO
,

David Kemper's board positions:

- Saint Louis Art Museum — Trustee
- Washington University in St. Louis — Vice Chair, Board of Trustees
- Missouri Botanical Garden — Trustee
- Donald Danforth Plant Science Center — Trustee
- Ralcorp Holdings — Director (since 1994)
- Civic Progress St. Louis — Member

Political giving pattern: Bipartisan establishment — Biden, Harris, Romney, McCain, McCaskill, Blunt, Ashcroft, Kit Bond, Dole, Bush, Cleaver

Bridge hunting priority: Banking/finance professional overlaps. Commerce Bancshares is ubiquitous in KC business — any stakeholder with a Commerce banking relationship has a potential bridge. UMB Financial (Mariner Kemper) is another entry point.

Cluster 4: Tech/Healthcare Wealth (Post-Cerner)

Connectors: Clifford Illig, Brent Shafer, William Neaves, John Danforth (board)

Shared traits: Cerner-connected wealth (Oracle acquired Cerner for \$28.3B in 2022), healthcare philanthropy, new money from acquisition.

Cerner executive/board network:

Cerner Corporation (acquired by Oracle 2022)

% % % EXECUTIVES

% % % % Neal Patterson (co-founder, deceased 2017)

% % % % Clifford W. Illig (co-founder, Vice Chairman) — \$500M+ est.

% % % % Brent Shafer (Chairman/President 2018+)

% % % % Zane M Burke (EVP)

% % % % Marc G Naughton (CFO/SVP)

% % % BOARD

% % % % John Danforth — Former US Senator (MO)

% % % % Mitch Daniels — Former Indiana Governor

% % % % William Zollars — Former YRC Worldwide CEO

% % % % William B Neaves — Stowers Institute connection

% % % % Denis Cortese — Healthcare executive

% % % NOTABLE FORMER

% % % Amanda Adkins (SVP 2004-2010) — Kansas political candidate

% % % Nancy-Ann DeParle — Obama health policy advisor

Clifford W. Illig detail:

- Cerner co-founder, estimated worth \$500M+ from Oracle acquisition
- OpenFEC: \$140K to Congressional Leadership Fund, \$50K to Heartland USA PAC, \$32K to NRCC
- Likely board overlaps: Children's Mercy, KC Community Foundation
- Priority: VERY HIGH — wealthy, philanthropically inclined, deep KC roots, children's welfare interest aligns with Youthfront

Bridge hunting priority: Post-Cerner executives who stayed in KC with newly liquid wealth. Healthcare/tech professional overlaps. Stowers Institute connections.

Additional High-Value Network Nodes

Stowers Institute for Medical Research

- \$2B+ original endowment (American Century Investments as wealth source)
- KC headquarters
- Current American Century executives = potential prospects
- James Stowers (founder, 1924-2014), Virginia Stowers (co-founder, 1930-2021)

Hunt Family (KC Sports/Oil Dynasty)

- Lamar Hunt Jr. — Net worth ~\$2B, Kansas City Chiefs owner
- Loretto Properties LLC
- Political: Gridiron PAC (\$30K), Roy Blunt, Steve Stivers
- Lamar Hunt Trust Estate — Oil and gas production/exploration

Hall Family (Hallmark Cards)

- Hall Family Foundation — \$1.03B assets
- Hallmark Cards Inc. — privately held, KC headquarters
- Adele M. Hall — President/CEO, \$15.2K to RNC
- Crown Center development (KC real estate)

Outreach Priority Ranking

Priority · Name · Est. Capacity · Why

----- · ----- · ----- · -----

- 1 · Clifford W. Illig · \$500M+ · Cerner co-founder, active philanthropist, children's welfare alignment
- 2 · Julia Kauffman · Foundation-scale · Kauffman Foundation chair, KC's #1 philanthropic family
- 3 · Hall Family · \$1B foundation · Hallmark founders, deeply embedded in KC
- 4 · Lamar Hunt Jr. · ~\$2B · Chiefs owner, philanthropic family legacy
- 5 · David/John Kemper · Banking dynasty · Extensive board network, bipartisan, cultural institutions
- 6 · Jonathan Baum · \$200K+ giving · George K. Baum Holdings, Mission Hills
- 7 · Bill Ryan · \$584K giving · Shamrock Corp CEO, demonstrated \$1M giving capacity
- 8 · James/Marilyn Hebenstreit · \$891K/\$648K giving · Alaris Capital, Linda Hall Library board
- 9 · Gregory Orman · \$3.5M+ giving · Self-made, community-minded
- 10 · Mark O'Connell · \$451K giving · MSTS Chairman, Leawood

Harvest Data Available for Cross-Reference

Dataset · Records · Use for Connection Mapping

----- · ----- · -----

- LittleSis relationships · ~139 entities · Direct relationship edges between KC power brokers
 - 990 officer cross-reference · 964 officers · Nonprofit board co-service (stakeholder on same board as prospect)
 - FEC co-giving records · 66,801 · Political committee co-donors (weak but real signal)
 - Enriched top prospects · 71 profiles · Full board ties, foundation connections, community roles
 - Enriched Tier 2 prospects · ~200 profiles · Moderate detail on mid-tier prospects
 - Prospect search index · 23,782 entries · Name, employer, city, score — lightweight matching
- These datasets are in `_docs/_build/api-sources/kc-donor-prospecting/harvest/output/` and `public/data/`.

Connection Types & Scoring

Purpose: Taxonomy of relationship types, strength scoring rubric, and approach strategy framework. Used by the /stakeholder-map skill to classify and rank discovered connections.

Source: Agentic Connection Mapping Strategy (../agentic-connection-mapping.md)

Relationship Types

Every discovered connection between a stakeholder and a prospect (or another stakeholder) is classified by type. Types determine base scoring and approach strategy.

Type · Description · Example · Base Score

----- · ----- · ----- · -----

board · Co-service on a nonprofit, corporate, or institutional board · Both on Nelson-Atkins Museum Board of Trustees · 90

church · Co-membership or co-leadership at a church or faith community · Both attend Village Presbyterian Church · 85

professional · Same employer (current or past), client/vendor, industry peer · Both in KC private equity; both worked at Commerce Bank · 75

social · Same country club, neighborhood association, alumni group, social circle · Both members of Mission Hills Country Club · 65

academic · Same alma mater, especially overlapping years or shared organizations · Both KU Law alumni · 55

philanthropic · Both give to organizations with overlapping missions · Both donors to KC Community Foundation · 50

geographic · Same ZIP code or neighborhood · Both in 66208 (Prairie Village) · 40

political · Gave to same political committees (FEC co-giving) · Both contributed to Congressional Leadership Fund · 30

family · Spouse, sibling, or family connection bridges to the other person · Prospect's spouse is on a board with a stakeholder · varies

event · Co-attended a specific event (gala, conference, panel) · Both at KC Chamber annual dinner 2025 · varies

Strength Levels

Each connection is rated as one of three strength levels:

Strength · Criteria · Score Multiplier

----- · ----- · -----

strong · Direct, active, confirmed relationship. They know each other by name. Evidence is specific and current. · 1.0x

moderate · Shared context that implies acquaintance but not confirmed personal relationship. Same organization but different roles/times. · 0.7x

weak · Structural overlap only. Same industry, same neighborhood, same committee — but no evidence of personal connection. · 0.4x

Path Scoring Rubric

When multiple connection paths exist between a stakeholder and a prospect, rank them using this weighted rubric:

Factor · Weight · Scoring Guide

----- · ----- · -----

Relationship type · 30% · Use base scores from type table above

Connector willingness · 25% · Board member: 95 (it's their job), Major donor: 80 (invested in YF), Staff: 70 (mission-aligned), Volunteer: 60, Church partner: 65, Acquaintance: 40

Recency · 20% · Current/active: 100, Within 2 years: 75, 2-5 years: 50, 5+ years: 25

Specificity · 15% · Named co-event/meeting: 95, Same org same time: 80, Same org different time: 50, Same industry/neighborhood: 30

Naturalness · 10% · Would the intro feel organic? Board dinner mention: 95, "My friend works there": 70, Cold "I know someone who...": 40

Composite score = weighted sum, range 0-100

Connection Distance

Distance · Definition · Value

----- · ----- · -----

1st degree · Stakeholder and prospect share a direct context (same board, same church, same employer) · 10x value — this is the gold standard

2nd degree · Stakeholder knows someone who knows the prospect · 1x value — useful but requires extra step

3rd degree · Two intermediaries between stakeholder and prospect · Skip — functionally cold outreach with extra steps

Rule: Always surface 1st-degree connections prominently. Present 2nd-degree as supplementary. Never chase 3rd-degree connections.

Approach Strategies by Type

Board Co-Service

"Sarah mentions Youthfront's camp impact at the next Nelson-Atkins board dinner — natural conversation between fellow trustees who share youth/arts mission alignment."

- Setting: Board meeting, committee gathering, annual event
- Tone: Peer-to-peer, no ask — just awareness
- Why it works: Shared institutional context, organic timing, mutual respect

Church Co-Membership

"Ed invites James to a YF camp Sunday presentation at Village Pres — low-pressure, mission-focused, in James's own church."

- Setting: Church service, small group, church event
- Tone: Faith community context, familiar setting
- Why it works: Trust already exists through shared faith community

Professional Overlap

"Mike requests a coffee meeting as CEO of a KC nonprofit — positions it as seeking business perspective on YF's financial sustainability, not as an ask."

- Setting: Coffee, lunch, office visit
- Tone: CEO-to-executive, flattering framing, relationship before ask
- Why it works: Professional credibility, builds relationship before any gift conversation

Social Proximity

"Cheryl sees James at the country club and mentions the upcoming YF family event — casual, no pressure, in a social setting they both enjoy."

- Setting: Country club, neighborhood gathering, school event
- Tone: Casual, social, non-transactional
- Why it works: Existing social comfort, repeated exposure

Philanthropic Overlap

"Tim mentions that YF's camp mission aligns with the Kauffman Foundation's youth development focus — suggests a site visit to see the programs in action."

- Setting: Foundation meeting, donor event, written correspondence
- Tone: Mission-aligned, data-supported, impact-focused
- Why it works: Shared values create natural affinity

Cold Approach Fallback

When no warm path is found, the connection map should still provide a cold approach recommendation:

- Direct mail with camp impact story + event invitation
- Lead with the geographic/community angle most relevant to the prospect
- Reference any adjacent connection (e.g., "Your neighbor [name] has supported YF for years")
- Prioritize low-barrier entry points: Something to Eat packing event, camp open house, annual report

Output Schema Reference

Each connection edge in the stakeholder connection map should include:

```
``json
{
  "connected_to": {
    "id": "prospect-uuid or stakeholder-id",
    "name": "Full Name",
    "type": "prospect | stakeholder",
    "tier": 1
  },
  "connection_type": "board | church | professional | social | academic | philanthropic | geographic | political | family | event",
  "shared_context": "Human-readable description of what they share",
  "strength": "strong | moderate | weak",
  "evidence": "How this was discovered — source description",
  "evidence_url": "URL if available",
  "status": "active | historical",

Research Gaps & Human Input Needed

Purpose: Track what's known vs. unknown for each stakeholder, and flag items that only a human can fill — things no API or web search can discover.

Last updated: 2026-03-22

Critical Gaps (Blocking)

These gaps prevent connection mapping from working for certain stakeholders. They require direct input from Youthfront staff or board members.

3 Board Members with Zero Data

Stakeholder · What's Known · What's Needed

----- · ----- · -----

Tina Harris · Name, board role (Form 990) · Employer, church, location, LinkedIn profile (if exists), any external board roles, phone/email for direct outreach

Jeanette Thomas · Name, board role (Form 990) · Same as above

Jeff Smith · Name, board role (Form 990) · Same as above. Note: "Jeff Smith" is a common name — LinkedIn search will be unreliable without additional identifiers

Who can fill this: Mike King (CEO) or Lisen Tammeus Mann (VP Development) — they interact with these board members and can provide basic biographical information.

VP Development Has No LinkedIn

Stakeholder · What's Known · What's Needed

----- · ----- · -----

Lisen Tammeus Mann · Name, title (VP Development & Marketing), ECFA donor contact · LinkedIn URL (if exists), employer history, church, location, external board roles, professional associations

Why this matters: As VP of Development, Lisen is likely the stakeholder with the most direct donor relationships. Her network is potentially the single most valuable one to map, and we have almost no data.

High-Value Gaps (Not blocking, but significantly limit connection discovery)

These are gaps that exist for stakeholders we *do* have data on, but where key connection-rich fields are unknown.

Church Affiliations

Only discoverable via LinkedIn (rare), web search (sometimes), or direct ask (reliable).

Stakeholder · Church Status

----- · -----
Tim Smith · Unknown — likely attends a KC church given faith-based career

Cheryl Reinhardt · Unknown

Dean Blevins · Unknown — Nazarene denomination likely, but specific church unknown

Aaron Mitchum · Unknown — Nazarene background likely

Ed Garlich · Unknown — 26 years in faith-based org, church is almost certainly relevant

Mike King · Unknown — CEO of faith-based org, church is certainly relevant

Topher Philgreen · Unknown

All 3 LinkedIn-less board members · Unknown

Confirmed: None of the 17 stakeholders have a confirmed church affiliation in the data.

Why this matters: For a faith-based nonprofit, church co-membership is one of the highest-trust connection types (score: 85). Youthfront partners with 200+ churches annually. This is likely the largest untapped connection surface.

How to fill: Annual board survey: "What church do you attend?" Or a simple email from Lisen/Mike.

Country Clubs & Social Memberships

Stakeholder · Status

----- · -----
All 17 · Unknown for all

Why this matters: The Leawood/Mission Hills/Prairie Village financial elite cluster heavily overlaps through country clubs. A single confirmed membership from Tim Smith or Cheryl Reinhardt could unlock 5-10 Tier 1 prospect connections.

How to fill: Direct ask. Country club membership is rarely public data.

Children's Schools

Stakeholder · Status

----- · -----
All 17 · Unknown for all

Why this matters: PTA/school board overlap is a strong social connector, especially in Johnson County where school communities are tight. If a board member's children attend the same school as a Tier 1 prospect's children, that's a natural, organic bridge.

How to fill: Direct ask. Schools are sometimes mentioned on LinkedIn or in church directories.

Data Quality Gaps (Have data, but incomplete or stale)

LinkedIn Profiles That Need Refresh

Stakeholder · Last Pulled · Issue

Mike King · 2026-03-21 · Experience section has no dates — may need a deeper pull with more sections

Carrie Hackett · 2026-03-21 · Minimal profile — only 27 connections, no dates on current role

Affiliations That May Be Incomplete

Stakeholder · What's Likely Missing

Tim Smith · Non Profit DNA consulting clients (not public); other board roles beyond those listed

Cheryl Reinhardt · Additional bar association memberships, women's professional organizations, potential nonprofit boards beyond YF

Ed Garlich · Sigma Chi alumni chapter involvement (noted fraternity membership but no activity data); insurance industry associations

Tophir Philgreen · Investment/lending portfolio organizations; real estate associations

Alex Mathew · Additional community organization boards beyond CHWC; justice system advisory roles

Megan Fountain · Personal donor network contacts from 12 years of self-funding at Mission Adelante

Structural Gaps (System-level, not per-stakeholder)

Missing Stakeholder Categories

The registry currently covers board + executives + key staff (17 people). These categories are not yet represented:

Category · Estimated Size · Why They Matter · How to Obtain

Major donors (\$5K+ lifetime) · 20-50 people · They've already demonstrated commitment; their networks overlap with prospect pool · CRM/Salesforce export

Church partner pastors · 200+ churches × 1-2 leaders · Highest-trust introduction channel for faith-motivated donors · Church partnership database

Former board members · 5-15 people · Still connected to YF, may have extensive networks from board service years · Historical 990 filings, staff knowledge

Camp family advocates · Unknown · Parents who actively promote YF in their social circles · Camp registration data, staff nomination

Key volunteers · 10-30 people · Long-term Something to Eat, Service Saturday, camp volunteers with community standing · Staff nomination

Recommendation: Start with former board members (Lou Francis confirmed as recent treasurer) and top 10 major donors. These are the lowest-effort additions with highest connection mapping value.

No Existing Connection Data

The connected_prospect_ids field in insiders.json is empty for all 17 stakeholders. No connections have been formally mapped yet. The /stakeholder-map skill is starting from zero.

Harvest Data Not Yet Cross-Referenced Against Stakeholders

These datasets exist but haven't been systematically matched against stakeholder affiliations:

Dataset · Records · Cross-Reference Needed

----- · ----- · -----

990 officers · 964 · Match stakeholder board/employer affiliations against nonprofit officer lists

FEC contributions · 66,801 · Match stakeholder names against political donor records (may reveal co-giving with prospects)

LittleSis relationships · ~139 entities · Check if any stakeholder affiliations overlap with mapped KC power network entities

Enriched Tier 1-2 prospects · 71 · Match prospect board roles, employers, and churches against stakeholder affiliations

Recommended Human Actions

Ordered by impact and ease:

1. Email board members asking: employer, church, country club/social memberships, children's schools, other board roles. A simple Google Form would work. (fills the largest gap)
2. Ask Mike King or Lisen for biographical details on Tina Harris, Jeanette Thomas, and Jeff Smith (unblocks 3 stakeholders)
3. Search for Lisen Tammeus Mann on LinkedIn with alternative name spellings, maiden name, or through Youthfront company page followers (unblocks highest-value stakeholder)
4. Pull former board member names from historical 990 filings and add Lou Francis + others to registry (expands stakeholder pool)
5. Export top 20 major donors from CRM with basic biographical data (expands stakeholder pool into wealth-adjacent territory)

Stakeholder Connection Mapping — Results & Recommendations

Research date: March 22, 2026

Prepared for: Youthfront Development Team

Executive Summary

We researched all 17 Youthfront stakeholders (board members, executives, and key staff) to map their connections to prospects in the donor database. Here is what we found:

- 65 connections discovered across 17 stakeholders
- 11 LinkedIn profiles analyzed (6 stakeholders have no LinkedIn or minimal presence)
- 10 multi-path prospects — people reachable through 2 or more stakeholders
- 6 new stakeholder candidates identified during research — people not yet in the system who could open doors
- 5 strong connections, 22 moderate, and 38 weak — meaning most leads still need verification through direct conversation
- 4 stakeholders returned zero connections due to missing biographical data

The single most important takeaway: the richest connection surfaces are invisible to automated research. Church affiliations, country club memberships, consulting client lists, and personal donor networks can only be unlocked through direct conversations with stakeholders. A short board survey would likely double the number of actionable connections.

How to Read This Report

Connection types describe how a stakeholder and prospect are linked:

Type · What it means · Trust level

----- · ----- · -----

Family · Spouse or relative · Highest — treat as household unit

Church · Same church or denomination · Very high — shared faith community

Professional · Same employer, industry peer, or business contact · High — shared work context

Social · Same club, neighborhood group, or social circle · Moderate — familiar faces

Academic · Same school, especially overlapping years · Moderate — alumni bond

Philanthropic · Both give to organizations with similar missions · Moderate — shared values

Geographic · Same neighborhood or ZIP code · Lower — proximity only

Strength levels indicate how likely they actually know each other:

- Strong — They know each other by name. Confirmed evidence (same employer, LinkedIn endorsement, shared board). Ready to act on.
- Moderate — Shared context suggests acquaintance (same organization at overlapping times, same professional community). Worth verifying.
- Weak — Structural overlap only (same industry, same neighborhood). Needs investigation before acting.

Scores range from 0 to 100 and combine five factors: relationship type (30%), connector willingness (25%), recency (20%), specificity (15%), and naturalness of introduction (10%). Anything above 70 is strong. Above 55 is worth pursuing. Below 45 is speculative.

Top Bridge Opportunities

These are the 15 highest-scored connections across all stakeholders — sorted by score. Each one represents a real introduction path worth pursuing.

Ed Garlich (Board Member, Creative Giving Advisor)

Ed's 23 years at Federated Insurance and current role at Rich & Cartmill give him the deepest confirmed professional network of any stakeholder.

Prospect · Score · Connection · Shared Context · Suggested Approach

----- · ----- · ----- · ----- · -----
Werner Lienenmann · 92 · Professional (strong) · Current colleague at Rich & Cartmill, confirmed political donor · Ed invites Werner to a Youthfront event as a colleague — "Come see what I've been involved with for 26 years."

Phil Irwin · 78 · Professional (strong) · Former Federated SVP & CFO, then President/CEO — 23 years of overlap · Ed reaches out as a former colleague with a decades-long relationship. Invites to a camp tour or Something to Eat event.

Carl Schroer · 76 · Professional (strong) · Former VP Sales & Marketing at Federated — Ed's direct functional leadership · Ed contacts his former VP. References their shared Sales & Marketing years.

Chad Ogren · 74 · Professional (strong) · Former VP Sales & Marketing at Federated — same department · Same approach as Schroer — former departmental leadership.

Michael Merriman · 64 · Professional (moderate) · Chairman, Americo Life Insurance. Both in KC insurance. Merriman also on Boy Scouts board. Noted as "very low-profile" — needs warm intro. · Ed reaches out through KC insurance industry channels, referencing their shared commitment to youth organizations.

Cheryl Reinhardt (Vice Chair)

Cheryl's legal network through Stinson LLP and her family connection make her uniquely positioned.

Prospect · Score · Connection · Shared Context · Suggested Approach

----- · ----- · ----- · ----- · -----
Randall Reinhardt · 92 · Family (strong) · Almost certainly Cheryl's husband — same surname, same employer (Zephyr Products), same city, both attorneys · Treat as household giving unit. Cheryl brings Randall to a Youthfront event.

Mark Shaiken · 65 · Professional (moderate) · Both connected to Stinson LLP. Shaiken is a current Partner. KC legal community is tight. · Cheryl reaches out through KC bar or Stinson alumni network.

Parthenia Evans · 62 · Professional (moderate) · Both women attorneys connected to Stinson LLP in Overland Park · Cheryl invites Parthenia to a Youthfront women's event or Something to Eat volunteer day.

Lisen Tammeus Mann (VP Development & Marketing)

Lisen's 10+ years managing UMKC alumni relations is the most underexplored connection surface.

Prospect · Score · Connection · Shared Context · Suggested Approach

----- · ----- · ----- · ----- · -----
Jeanette Prenger · 72 · Professional (moderate) · Prenger is a UMKC Trustee. Lisen managed UMKC alumni and constituent relations — she likely worked directly with Prenger. · Lisen reconnects through their shared UMKC relationship.

Prenger's JA and Boy Scouts national board service confirms she cares about youth.

Julie Cheslik · 60 · Professional (moderate) · Both UMKC-connected. Lisen managed alumni relations for 10+ years. · Lisen reconnects with former UMKC colleagues.

Mike King (President/CEO)

Mike's CEO title enables peer-level meetings that other stakeholders cannot credibly request.

Prospect · Score · Connection · Shared Context · Suggested Approach

----- · ----- · ----- · ----- · -----

Dr. William Wiesman · 72 · Church (moderate) · Both connected to Church of the Nazarene denomination. Mike holds M.A. from Nazarene Theological Seminary. · Mike reaches out through Nazarene denominational channels — positions Youthfront's programs as serving Nazarene churches.

David Ward · 71 · Philanthropic (moderate) · Both confirmed Christian leaders in KC. Ward chairs faith-based nonprofits (Sweet Sleep, Cul2vate). · Mike requests a coffee meeting as CEO — seeks Ward's counsel on how YF programs align with his giving priorities.

Dan Tasset · 68 · Philanthropic (moderate) · Both confirmed Christians in KC. Tasset donated a building to Hope Faith Ministries. Founded One5 Foundation. · Mike reaches out as a fellow KC faith leader — references shared commitment to serving vulnerable populations.

Tim Smith (Board Chair)

Prospect · Score · Connection · Shared Context · Suggested Approach

----- · ----- · ----- · ----- · -----

David Ward · 68 · Philanthropic (moderate) · Both confirmed Christian philanthropists in KC. Ward funds Sweet Sleep and Cul2vate. Tim has 30+ years in faith-based fundraising. · Tim invites Ward to an impact dinner as a fellow faith-based philanthropist.

Dan Tasset · 66 · Philanthropic (moderate) · Both confirmed Christians in KC. Tasset's Hope Faith Ministries and One5 Foundation align with Tim's faith-based career. · Tim references shared faith-giving values. Mentions YF's Something to Eat alongside Tasset's Hope Faith work.

Multi-Path Prospects

These prospects are reachable through multiple stakeholders. Multi-path prospects are especially valuable because each additional path increases the chance that at least one introduction will be warm and effective.

David Ward — 5 paths (highest-priority prospect)

David Ward (Mission Hills, KS) chairs Sweet Sleep and Cul2vate — both faith-driven nonprofits serving vulnerable populations. He is reachable through more stakeholders than any other prospect.

Stakeholder · Score · Connection Type

----- · ----- · -----

Mike King · 71 · Philanthropic — CEO-to-philanthropist peer meeting

Tim Smith · 68 · Philanthropic — fellow faith-based philanthropist

Jeanette Thomas · 60 · Philanthropic — HOPE International donor network overlap

Tophers Philgreen · 52 · Professional — both KC investors/lenders

Lisen Tammeus Mann · 48 · Philanthropic — VP Development outreach

Recommended action: Mike King leads with a CEO-level coffee meeting. Tim Smith provides a warm introduction if he knows Ward through his consulting network. Ask Jeanette Thomas whether Ward was in her HOPE International donor circle.

Clark Hunt — 7 paths (widest reach)

Clark Hunt (Kansas City, MO) is a confirmed devout Christian whose Hunt Family Foundation funds 60+ KC youth agencies annually. He has the most introduction paths of any prospect, though all are weak connections.

Stakeholder · Score · Connection Type

----- · ----- · -----

Alex Mathew · 55 · Philanthropic — YFC/FCA alignment

Jeanette Thomas · 52 · Church — KC pastoral network

Aaron Mitchum · 50 · Philanthropic — youth mental health angle

Dean Blevins · 50 · Philanthropic — academic credibility on faith-based youth development

Megan Fountain · 46 · Philanthropic — front-line ministry story

Tophers Philgreen · 46 · Philanthropic — 39-year Youthfront veteran

Matt Saunders · 44 · Philanthropic — camp program authority

Recommended action: This requires a coordinated team approach. Mike King leads the meeting. Alex Mathew provides YFC/faith-based youth credibility. Dean Blevins offers academic authority. Matt Saunders hosts a camp site visit. Ask Jeanette Thomas if her Christ Community Church pastoral network connects to Hunt's Church of the Resurrection circle.

Dan Tasset — 4 paths

Dan Tasset (Leawood, KS) donated a building to Hope Faith Ministries and founded One5 Foundation for international poverty relief. Confirmed Christian philanthropist.

Stakeholder · Score · Connection Type

----- · ----- · -----

Mike King · 68 · Philanthropic — CEO-level meeting

Tim Smith · 66 · Philanthropic — fellow faith-driven giver

Jeanette Thomas · 52 · Philanthropic — HOPE International overlap

Tophers Philgreen · 45 · Professional — both KC investors

Recommended action: Mike King or Tim Smith leads. Ask Jeanette Thomas whether she knows Tasset from her HOPE International Heartland fundraising work (2016-2021).

David Battey — 4 paths

David Battey (Fairway, KS) founded Youth Volunteer Corps in 1987 — 330,000+ youth served. Confirmed Presbyterian. Both Tophers and Alex have worked in KC youth development alongside YVC for decades.

Stakeholder · Score · Connection Type

Topher Philgreen · 58 · Philanthropic — 35+ years of parallel KC youth work

Alex Mathew · 56 · Philanthropic — both KC youth development leaders

Matt Saunders · 42 · Philanthropic — complementary camp/volunteer programs

Joseph Gonzales · 38 · Philanthropic — both serve underserved KC youth

Recommended action: Ask Topher and Alex if they know Battey personally — 35+ years of parallel youth work makes prior interaction highly probable. Explore programmatic partnership (YVC volunteers at Youthfront camps) before any donation ask.

Jeanette Prenger — 3 paths

Jeanette Prenger (Kansas City, MO) is a UMKC Trustee, serves on Junior Achievement and Boy Scouts national boards, and won Nonprofit Connect's "Rising Star of Philanthropy" award.

Stakeholder · Score · Connection Type

Lisen Tammeus Mann · 72 · Professional — UMKC Trustee / alumni relations overlap

Tim Smith · 52 · Professional — KC nonprofit leadership ecosystem

Alex Mathew · 46 · Philanthropic — youth development mission overlap

Recommended action: Lisen leads — she likely worked directly with Prenger during her decade-plus managing UMKC alumni and constituent relations. Ask Lisen to confirm.

Additional Multi-Path Prospects

Prospect · Paths · Best Score · Key Stakeholders

Robert Martin (KC seminary professor) · 2 · 58 · Dean Blevins (academic peer), Mike King (NTS alumnus)

John Elliott (Herzog Foundation, \$325M) · 2 · 56 · Dean Blevins (Christian education expertise), Jeanette Thomas (faith/development)

Thomas McDonnell (\$75M foundation) · 2 · 51 · Mike King (CEO peer meeting), Tim Smith (philanthropy overlap)

Clifford Illig (Cerner co-founder, \$500M+) · 2 · 49 · Mike King (CEO credibility), Tim Smith (children's welfare philanthropy)

Terrence Dunn (JE Dunn CEO) · 2 · 48 · Alex Mathew (at-risk youth focus), Aaron Mitchum (OP geography)

Hub Organizations

These organizations appear across 3 or more stakeholder connections. They are the places where introductions happen most naturally.

Youthfront (internal hub)

All 17 stakeholders share Youthfront itself as an anchor. Board dinners, camp events, Something to Eat packing days, and the annual report are the primary settings for organic introductions.

UMKC (University of Missouri-Kansas City)

- Lisen Tammeus Mann — Senior Director of Alumni & Constituent Relations (10+ years)
- Megan Fountain — MA student and Resident Assistant (2003-2007)
- Jeanette Prenger (prospect) — UMKC Trustee
- Julie Cheslik, Steven Waldman, Robert Downs, Lynn Rasmussen (prospects) — UMKC-affiliated

UMKC is Lisen's strongest connection surface. A targeted review of UMKC-affiliated prospects in the database could yield significant results.

Nazarene Theological Seminary (NTS)

- Dean Blevins — Professor since 2005
- Mike King — M.A. alumnus (2015)
- Joseph Gonzales — MDiv alumnus (2017)
- Aaron Mitchum — Nazarene educational ecosystem (MNU)

NTS and MidAmerica Nazarene University form a tight denominational academic network. Prospects connected to Wesleyan/holiness seminary circles (Robert Martin, Lovett Weems, Dr. William Wiesman) are best reached through this channel.

Stinson LLP (law firm)

- Cheryl Reinhardt — Summer Associate (1991), 34 years in KC legal community
- 15+ Stinson attorneys already in the prospect database

Cheryl's Stinson connection opens a batch opportunity: if she maintains relationships with even a handful of the 15+ Stinson attorneys in the database, each one is a potential introduction. Ask Cheryl to review the list.

Federated Insurance

- Ed Garlich — Senior Marketing Rep (1988-2011), 23 years
- 19+ former Federated colleagues in the prospect database, including the former CEO

Ed's Federated network is the single highest-density connection cluster. Four of his connections scored above 74 (strong confirmed relationships).

KC Faith-Based Philanthropic Community

- Tim Smith, Mike King, Jeanette Thomas, Alex Mathew — all have deep roots in KC's Christian nonprofit ecosystem
- Prospects reached: David Ward, Dan Tasset, Clark Hunt, John Elliott — the highest-capacity faith-aligned prospects

This is not a single organization but a community of practice. Faith-based events, Christian CEO forums, denominational gatherings, and church partnerships are the natural settings.

Stakeholder Summaries

Tier 1: Highest Connection Value

Tim Smith — Board Chair

Metric · Value

----- · -----

Connections found · 7

Top bridge · David Ward (score 68)

Key insight · Tim's value is as a bridge to faith-motivated donors. His Non Profit DNA consulting client list is the single largest untapped connection surface — it can only be unlocked through a direct conversation.

Gaps · Current church unknown. Consulting clients private. No social memberships discovered.

New stakeholder candidates discovered:

- Bill High — CEO of Legacy Stone (family legacy/wealth advisory). Former supervisor who wrote Tim's LinkedIn recommendation. His client network likely includes high-net-worth families. Add to prospect database.
- Johnny Shipman — President of JDL Capital Advisors. Former client of Tim's. His recommendation specifically mentions Tim's ability to connect people. Add to prospect database.

Mike King — President/CEO

Metric · Value

----- · -----

Connections found · 9

Top bridge · Dr. William Wiesman (score 72) — Nazarene denominational peer

Key insight · Mike's CEO title enables peer-level meetings with corporate executives and foundation leaders. His LinkedIn interests reveal broad civic engagement beyond church/ministry (KC Common Good, Brothers In Blue, Thelma's Kitchen).

Gaps · Current church unknown. Prior employment history unclear (may have been at YF for ~51 years). No external board roles discovered.

Verification needed: Is Cory Scheer related to David Scheer (Inland Truck Parts)? Is Tim Dykes related to Archie Dykes (retired, Leawood)? Mike can answer both.

Cheryl Reinhardt — Vice Chair

Metric · Value

----- · -----

Connections found · 7

Top bridge · Randall Reinhardt (score 92) — likely spouse, treat as household giving unit

Key insight · Cheryl's Stinson LLP legal network includes 15+ KC attorneys already in the prospect database. As a self-described "passionate connector and philanthropist" with 500+ LinkedIn connections, a direct conversation would surface many more.

Gaps · No bar association memberships confirmed. Church unknown. Country club unknown. KU Law alumni network unexplored.

Action: Enrich Randall Reinhardt's prospect profile. Ask Cheryl to review the Stinson attorney list.

Ed Garlich — Board Member, Creative Giving Advisor

Metric · Value

----- · -----

Connections found · 9

Top bridge · Werner Lienenmann (score 85) — current colleague at Rich & Cartmill

Key insight · Ed has the highest density of confirmed professional connections. His 23 years at Federated Insurance created relationships with 19+ former colleagues already in the prospect database, including the former CEO. His son Andy Garlich is Senior Director of Advancement at Youthfront.

Gaps · Church unknown. Sigma Chi alumni network untapped. Insurance association memberships not confirmed.

Critical recommendation: Add Andy Garlich to the stakeholder registry at Tier 2 priority. As Youthfront's Senior Director of Advancement, his professional network is directly relevant to connection mapping.

Tier 2: Strong Connection Potential

Topher Philgreen — EVP Strategic Initiatives / COO

Metric · Value

----- · -----

Connections found · 4

Top bridge · David Battey (score 58) — fellow KC youth org veteran since the 1980s

Key insight · Topher's external network appears thin on paper (39 years at one organization), but he has personally interacted with every major Youthfront donor, partner, and supporter for nearly four decades. His "Investor, Private Lender" side activity could unlock connections in KC finance circles.

Gaps · Church unknown. Investment portfolio invisible publicly. No external board service.

Alex Mathew — Director, Youthfront Pathways

Metric · Value

----- · -----

Connections found · 6

Top bridge · David Battey (score 56) — both KC youth development leaders

Key insight · Alex's 7 years as Youth For Christ Executive Director means he cultivated donor relationships for YFC. Those donors are potential Youthfront donors. His 11-year Jackson County detention chaplaincy gives him a unique bridge into government/justice contacts. 21 mutual LinkedIn connections (highest of any stakeholder).

Gaps · Church unknown. YFC donor network only accessible through conversation. Jackson County contacts need specific name matching.

Dean Blevins — Board Member

Metric · Value

----- · -----

Connections found · 4

Top bridge · Robert Martin (score 58) — fellow KC seminary professor in Wesleyan tradition

Key insight · Dean's network lives in the academic and denominational world — seminary professors, Nazarene church leaders, Christian education scholars. His 2,827 LinkedIn followers (highest of all stakeholders) suggest broader influence than his formal affiliations reveal. His academic authority on Christian education makes him the ideal voice when approaching faith-based education funders like the Herzog Foundation (\$325M).

Gaps · Specific church unknown. Denominational network (30 years as Nazarene consultant across US/Canada) is enormous but invisible. Publication and conference speaking networks unexplored.

Lisen Tammeus Mann — VP Development & Marketing

Metric · Value

----- · -----

Connections found · 6

Top bridge · Jeanette Prenger (score 72) — UMKC Trustee, likely worked directly with Lisen

Key insight · Lisen has the highest untapped connection potential of any stakeholder. Her 10+ years managing UMKC alumni relations means personal relationships with thousands of university-connected professionals — many of whom are in the prospect database. A 30-minute conversation with Lisen about her UMKC contacts could unlock more connections than all other stakeholders combined. She has no LinkedIn profile, making automated research nearly impossible.

Gaps · No LinkedIn profile (critical). UMKC alumni network is invisible. Church unknown. Previous employers beyond UMKC and Youthfront not confirmed.

Tier 3: Moderate Connection Potential

Aaron Mitchum — Board Member

Metric · Value

----- · -----

Connections found · 3

Top bridge · Clark Hunt (score 50) — trauma-informed leadership expertise adds depth to YF pitch

Key insight · Aaron's network is in counseling/therapy circles and the Overland Park small business community, which are not well-represented in harvest data. His distinctive value is clinical expertise: when approaching prospects who care about youth mental health, Aaron speaks with professional authority.

Gaps · Church unknown. Consulting client network not accessible. OP business community connections invisible in public data.

Megan Fountain — Coordinator, Youth Ministry with Teen Parents

Metric · Value

----- · -----

Connections found · 3

Top bridge · Susana Eshleman (score 48) — both bilingual cross-cultural professionals serving children in KC

Key insight · Megan self-funded for 12 years at Mission Adelante, meaning she has cultivated a personal donor base who already believe in her ministry. That donor list is the single most actionable hidden asset. A conversation about her top 10-20 Mission Adelante donors could immediately yield warm Youthfront prospects.

Gaps · Personal donor network (critical — only accessible through conversation). Church unknown. Mission Adelante board not cross-referenced.

Matt Saunders — Senior Director of Camps

Metric · Value

----- · -----

Connections found · 2

Top bridge · Clark Hunt (score 44) — camp expertise is core content for any youth-focused donor pitch

Key insight · Matt's value is primarily programmatic — he IS what Youthfront sells to donors. His 7-year Indian Creek Community Church tenure in south JoCo is the most likely hidden bridge to prospects. Cross-referencing camp registration data against the prospect list could reveal which prospects already have camp experience.

Gaps · Current church unknown. Indian Creek Church network unexplored. Camp family database not cross-referenced.

Tier 4: Limited External Connections or Missing Data

Jeanette Thomas — Board Member

MAJOR UPGRADE: Jeanette was previously classified as "no data." Her LinkedIn profile was discovered during this research, revealing a rich background: former Youthfront camp director (1995-1999), 13-year pastor at Christ Community Church, 5-year HOPE International fundraiser, and current executive coaching practice. Recommend reclassifying to Tier 2.

Metric · Value

----- · -----

Connections found · 4

Top bridge · David Ward (score 60) — HOPE International donor network likely overlaps with Ward's faith-driven giving

Key insight · Jeanette describes herself as working where "faith meets work and economics, poverty meets gifted entrepreneur, generosity meets justice." She IS a connector by self-description. Her 13-year pastoral network at Christ Community Church and her HOPE International donor list are high-value connection surfaces.

Joseph Gonzales — Youth Pastor

Connections found · 1

--- · ---

Top bridge · David Battey (score 38)

Key insight · Joseph's value is programmatic — his Argentine neighborhood youth ministry and Rosebud Sioux Tribe heritage provide a compelling story for donor presentations. External high-capacity connections are limited (87 LinkedIn connections).

Tina Harris — Board Member

Connections found · 0

--- · ---

Key insight · No LinkedIn profile. No web presence beyond Form 990. "Tina Harris" is too common for automated research. Requires direct human input from Mike King or Lisen to fill basic biographical data.

Jeff Smith — Board Member

Connections found · 0

--- · ---

Key insight · No LinkedIn profile. "Jeff Smith" is extremely common — automated research is impossible. Requires direct human input. Worth asking Tim Smith (Board Chair, same surname) if they are related.

Carrie Hackett — Director of Program Administration

Connections found · 0

--- · ---

Key insight · Internal-facing operational role. Only 27 LinkedIn connections. Low priority for connection mapping — her value is administrative, not relational.

Fletch Kelly — Director of Facilities and Maintenance

Connections found · 0

--- · ---

Key insight · Operational role with limited external network. Lives in Louisburg, KS (outside core prospect geography). Mike King's LinkedIn endorsement for "Youth Ministry" suggests he contributes beyond his facilities title, but this does not translate to external prospect connections.

Coverage Gaps & Next Steps

What we cannot see (and only humans can fill)

The largest gaps in this research are not technical — they are informational. The following data points would dramatically expand connection mapping but can only be obtained through direct conversation:

1. Church affiliations — the single biggest gap

Not a single stakeholder has a confirmed current church. For a faith-based nonprofit that partners with 200+ churches annually, church co-membership is one of the highest-trust connection types. A single confirmed church from Tim Smith or Mike King could unlock 5-10 Tier 1 prospect connections.

Action: Send a one-question email to all board members: "What church do you attend?" Or include it in the board survey below.

2. Three board members with zero data

Tina Harris, Jeff Smith, and (partially) Jeanette Thomas cannot be researched without basic biographical information.

Action: Ask Mike King or Lisen for employer, church, location, and any external board roles for Tina Harris and Jeff Smith.

3. Lisen Tammeus Mann has no LinkedIn

As VP of Development, Lisen likely has the most direct donor relationships of any stakeholder. Her network is potentially the single most valuable one to map, and we have almost no data.

Action: Search LinkedIn for Lisen with alternative name spellings, maiden name, or through the Youthfront company page followers.

4. Private networks that are invisible to research

Stakeholder · Hidden Network · Why It Matters

----- · ----- · -----

Tim Smith · Non Profit DNA consulting clients · NPO leaders across the country who trust him personally

Megan Fountain · Personal donor base (12 years of self-funding) · People who already believe in her ministry

Alex Mathew · YFC donor relationships (7 years as ED) · Donors who support Christian youth mentoring

Jeanette Thomas · HOPE International Heartland donor list · Faith-driven anti-poverty donors

Ed Garlich · 26 years of personal donor knowledge at YF · Knows every major Youthfront donor personally

Topher Philgreen · 39 years of partner and supporter relationships · Institutional memory of every major YF interaction

Recommended Human Actions (in priority order)

1. Send a board survey asking: employer, church, country club/social memberships, children's schools, other board roles. A simple Google Form. This fills the largest gap across the board.
2. Ask Mike King or Lisen for biographical details on Tina Harris and Jeff Smith. This unblocks 2 stakeholders entirely.
3. Reclassify Jeanette Thomas to Tier 2 and schedule a conversation about her Christ Community Church pastoral contacts and HOPE International donor network.
4. Add Andy Garlich (Ed's son, Youthfront Senior Director of Advancement) to the stakeholder registry at Tier 2. His network is directly relevant.
5. Ask Ed Garlich to review the list of 19+ former Federated Insurance colleagues in the prospect database and confirm which ones he knows personally. This could immediately upgrade 10+ connections from "confirmed" to "ready to act."
6. Ask Cheryl Reinhardt to review the list of 15+ Stinson LLP attorneys in the prospect database.
7. Ask Megan Fountain for her top 10-20 personal donors from Mission Adelante. Cross-reference against the prospect database.
8. Pull former board member names from historical 990 filings. Add Lou Francis (recent treasurer) and others to the registry.
9. Export top 20 major donors from the CRM with basic biographical data to expand the stakeholder pool.
10. Cross-reference camp registration data against the prospect list to identify which prospects already have camp experience (Matt Saunders can verify).

Appendix: Data Sources & Methodology

Research Date

March 22, 2026

LinkedIn Budget Usage

11 of 17 stakeholders had LinkedIn profiles analyzed. 6 stakeholders had no LinkedIn profile or only cached/minimal data.

Data Sources Used

Source · What it provided

----- · -----

LinkedIn profiles & experience · Employment history, endorsements, mutual connections, interests, recommendations

LinkedIn interests/follows · Organizational affinities (KC Common Good, John Templeton Foundation, etc.)

Web search · Employer verification, organization affiliations, public records

Form 990 cross-reference · Board roles, officer positions at other nonprofits

FEC political donation records · Employer/occupation confirmation, giving capacity signals

LittleSis relationship database · KC power network entity matching

Enriched Tier 1-2 prospect profiles · Detailed giving history, board roles, faith signals

Prospect search index · Bulk matching of employer, city, and surname overlap

Confidence Levels

Level · Meaning · Count

----- · ----- · -----

High · Confirmed evidence (same employer records, LinkedIn endorsement, FEC records, family match) · 6 connections

Medium · Strong inference from shared context (same org at overlapping times, same professional community) · 26 connections

Low · Structural overlap only (same industry, same city, same philanthropic category) · 33 connections

What This Research Did Not Cover

- Direct conversations with stakeholders (the most valuable source)
- CRM/Salesforce giving history
- Church partnership database (200+ churches)
- Camp registration data
- Historical board member lists beyond current 990s
- Social media beyond LinkedIn
- Event attendance records

Research-backed, audience-facing guide articles. Each guide follows the standard format in docs/GUIDES-FORMAT.md and can be used for EEAT, internal prompts/supports, and strategy reference.

Master prompt: `_prompts/04-eeat-guide-generation.md` — use to generate a full guide (article, 10 rules, 5 right, 5 wrong, master strategy) for any topic with parameters for org and research.

Structure per guide

- Article — ~1000 words, researched, sourced (footnotes + Sources table).
- 10 rules — Rules of life flowing from the research, applied to the organization.
- 5 examples: doing it right — Concrete scenarios of good practice.
- 5 examples: doing it wrong — Concrete scenarios to avoid.
- Master vision, intention, and means — ~500 words, topic-specific strategy.

Adding a new guide

1. Choose a topic and slug (e.g. ai-data-privacy-youthfront).
2. Invoke `_prompts/04-eeat-guide-generation.md` with parameters: TOPIC, TOPIC_SLUG, ORGANIZATION, AUDIENCE; optionally RESEARCH_DIR or RUN_RESEARCH_FIRST.
3. Save output to `content/guides/<topic-slug>/index.md`.
4. Add a row to the table above.

AI for Youthfront Core Leadership

Full guide and role-specific briefs for the executive team and board leadership.

Main guide

- index.md (index.md) — AI for Youthfront Core Leadership

Full article, 10 rules, 5 do-right / 5 do-wrong examples, and master vision/intention/means. Audience: Mike King, Topher Philgreen, Lisen Tammeus Mann, Natasha Nikkel, Jim Newberry, and board leadership (Tim Smith, Cheryl Reinhardt).

Role briefs (one-page each)

Role · Name · Brief

----- · ----- · -----

President & CEO · Mike King · brief-ceo.md (brief-ceo.md)

EVP Strategic Initiatives · Topher Philgreen · brief-evp-strategic.md (brief-evp-strategic.md)

VP Development & Marketing · Lisen Tammeus Mann · brief-vp-dev-marketing.md (brief-vp-dev-marketing.md)

COO · Natasha Nikkel · brief-coo.md (brief-coo.md)

VP Ministries · Jim Newberry · brief-vp-ministries.md (brief-vp-ministries.md)

Board leadership (Tim Smith, Chair; Cheryl Reinhardt, Vice Chair) are covered in the main guide and in the CEO brief (board adoption and review).

Article

This guide is for Youthfront’s executive team and board leadership: Mike King (President & CEO), Topher Philgreen (EVP Strategic Initiatives), Lisen Tammeus Mann (VP Development & Marketing), Natasha Nikkel (COO), Jim Newberry (VP Ministries), and Tim Smith and Cheryl Reinhardt (Board Chair and Vice Chair).^{^{1}} AI is no longer optional to think about—it is already in donor communications, content drafts, program administration, and strategic planning. Your roles determine who owns what, who approves what, and who speaks for the organization when donors or accreditors ask. This document spells that out so the leadership table can move as one.

Why the executive team and board. The board holds governance; the CEO reports to the board and leads the executive team.^{^{2}} AI policy is both a governance matter (board adopts the stance) and an operational one (each leader owns implementation in their area). Without clarity at this level, ownership drifts and the organization cannot give a coherent answer to ECFA, major donors, or staff. With it, Youthfront can say clearly how AI serves—and does not undermine—formation, trust, and “true empathy and love.”^{^{3}}

By role: who owns what.

- Mike (CEO) and the board (Tim, Cheryl). The board owns the AI stance: what is in bounds and out of bounds, and what requires board or CEO approval. Mike, as principal officer, is the public face of that stance and ensures the executive team aligns. He does not need to run every tool, but he must be able to state the position and delegate clearly. The board should review the stance at least annually and when use or risk changes.
- Topher (EVP Strategic Initiatives). Strategic initiatives sit at the intersection of new opportunities and risk. Topher is the natural owner for AI strategy and roadmap: prioritization (efficiency ! revenue ! quality ! ethics), use-case discovery, and coordination with governance. He can drive the inventory of current and planned AI use, the adoption path, and the link between AI and the single source of truth (Base). He does not replace area owners but helps the table decide what to do first and what to document.
- Lisen (VP Development & Marketing). As donor contact per ECFA and leader of development and marketing, Lisen owns AI in fundraising and external communications.^{^{1}} That means: donor data never in public or unvetted AI; every donor-facing message reviewed and approved by a human; transparency when donors ask how Youthfront uses AI. She ensures the case for support and messaging guide anchor all AI-assisted copy and that the org can answer accreditors and major donors in one voice.
- Natasha (COO). Operations touch systems, processes, and often the first tools staff adopt (e.g. drafting, scheduling). Natasha owns AI in operations and administration: where it is used for efficiency, what is approved, and that it stays within the board-approved scope. She can lead or coordinate the inventory of current use (who uses what, where) so the policy is grounded in reality. She does not need to approve every departmental use if ownership is clear, but she ensures nothing falls between the cracks.
- Jim (VP Ministries). Ministry programs—camp, neighborhood, family—are where formation and youth safety live. Jim owns AI in programs and formation-adjacent use. That means: no AI decisions about youth; no youth or vulnerable-family data in public or unvetted AI; formation content and curriculum human-designed and reviewed.^{^{4}} He is the escalation path when a use case blurs the line between “support” (e.g. scheduling) and “formation content or decision.” When in doubt, his area defaults to human-led and policy-compliant.

Board leadership. Tim (Chair) and Cheryl (Vice Chair) ensure the board has a clear stance, that it is reviewed, and that the CEO and team can execute. They do not need to approve every tool—they need to approve the framework and hold the org accountable to it.

One table, one voice. When ECFA or a major donor asks “What is Youthfront’s position on AI?” the answer should be consistent whether it comes from Mike, Lisen, or the board. That only happens if this group has agreed on the stance, the owners, and the boundaries—and revisits them together.

10 rules

1. The board adopts the AI stance; the CEO and exec team own execution. Tim, Cheryl, and the full board approve scope, limits, and approval paths; Mike and the executive team implement and speak with one voice.
2. One owner per domain. Topher—strategy and roadmap; Lisen—donors and external comms; Natasha—operations and

inventory; Jim—programs and formation. No use case without a named owner.

3. Inventory before hardening policy. Natasha (or designee) leads a simple inventory of current and planned AI use so the stance matches reality; Topher can use it for the roadmap.

4. No youth or vulnerable-family data in public or unvetted AI. Jim's domain is the front line; everyone supports the rule. No exceptions without board-level discussion.

5. Donor-facing and formation-adjacent content always get human approval. Listen for donor comms; Jim for anything touching formation or youth. No "AI-only" publish.

6. Topher drives the adoption order. Governance and youth safety first; then donor intelligence and revenue; then content and efficiency—so the journey is deliberate, not ad hoc.

7. Listen can answer donors and ECFA. She has a one-page summary of the stance and ownership so she (or Mike) can respond clearly when asked about AI, data, and authenticity.

8. Natasha ensures operations stay in scope. Admin and efficiency uses are approved and documented; nothing in her area goes live without fitting the board-approved boundaries.

9. Jim is the formation gate. When a use case touches programs, camp, or family ministries, Jim confirms it is human-led and policy-compliant before it expands.

10. The leadership table reviews together. At least once a year—or when a major use or risk appears—the exec team and board revisit the stance, inventory, and ownership so nothing drifts.

5 examples: doing it right

1. Board adopts stance with exec input. Tim and Cheryl put a one-page AI policy on the board agenda. Mike and Topher brief the board on current use and proposed scope; the board approves. Listen, Natasha, and Jim know their ownership from that document. The org can now answer donors and ECFA.

2. Topher runs a lightweight inventory. He sends a short survey to the exec team and key staff: "What AI tools or uses do you or your area currently use or plan?" He summarizes results (e.g. ChatGPT for drafts, a donor-research tool in development). Natasha uses it for operations; the board uses it to calibrate the policy.

3. Listen owns donor-comms approval. Any AI-assisted appeal or thank-you is reviewed by her or a designee against the messaging guide and case for support before it goes out. When a donor asks "Do you use AI?" she says: "We use it to support drafting; humans approve every message you receive."

4. Jim draws the line on formation. A staff member proposes using AI to draft a camp reflection. Jim says: formation content is human-designed and reviewed; AI may assist only with explicit approval and theological/formational review. The rule is clear and enforced.

5. Mike and the board review annually. Once a year, Mike (or Topher) presents to the board: stance, inventory, and any new use cases or risks. Tim and Cheryl ensure it stays on the agenda. Ownership and boundaries stay current.

5 examples: doing it wrong

1. No single owner for AI in fundraising. Listen assumes "someone in marketing" handles it; development uses ChatGPT for donor emails with no policy. When ECFA or a donor asks, no one can speak clearly and no consistent practice exists.

2. Board defers entirely to staff. Tim and Cheryl say "let the team figure it out." No board stance, no framework. Tools are adopted ad hoc; when a risk or donor question appears, the board has to retrofit policy under pressure.

3. Topher builds a roadmap without an inventory. He proposes a big AI initiative without knowing what is already in use. The policy and roadmap don't match reality; staff feel confused or out of compliance.

4. Jim's area uses AI for formation content without his sign-off. A camp or neighborhood lead publishes AI-generated reflection or curriculum without formational review. Jim finds out later; the line between support and formation is blurred and the org's "not a formula" value is at risk.

5. Natasha doesn't own the inventory. "Everyone just use what you need" with no central record. When the board asks "what are we using?" no one has a clear answer; governance and operations are disconnected.

Master vision, intention, and means

Vision. Youthfront's core leadership—Mike, Topher, Lisen, Natasha, Jim, and the board—share one AI stance, one set of owners, and one story for donors and accreditors. The executive team knows who owns AI in strategy, fundraising, operations, and programs; the board holds the framework and reviews it. No drift, no shadow use, no “someone else's problem.”

Intention. The intention is stewardship at the leadership level: protect mission, formation, and trust while enabling AI where it clearly helps. Each role exists so that the right person owns the right boundary—CEO and board for the stance, Topher for strategy and order, Lisen for donors and comms, Natasha for operations and inventory, Jim for programs and formation. Together they ensure technology serves Youthfront's identity: “not a formula,” “true empathy and love,” and theological reflection.

Means. The board adopts a concise AI policy (scope, limits, ownership, youth and data safeguards) and reviews it at least annually. Mike ensures the exec team aligns and can speak for the org. Topher drives the adoption path and use-case prioritization and keeps the roadmap tied to the stance. Lisen owns donor and external-comms AI and can answer ECFA and donors. Natasha owns or coordinates the inventory and ensures operations stay in scope. Jim owns programs and formation and is the gate for any use that touches youth or formation content. The leadership table revisits stance, inventory, and ownership together so the framework stays current and one voice is maintained.

Your AI priorities — CEO

One-page brief for Mike King, President & CEO. Full guide: AI for Youthfront Core Leadership (index.md).

Your role in AI governance

- You and the board own the stance. The board adopts the AI policy (scope, limits, approval paths); you are the principal officer and public face. You don't run every tool—you ensure the executive team aligns and can speak for the org.
- You report to the board. Tim (Chair) and Cheryl (Vice Chair) need a clear stance to hold you accountable. You need a clear stance so you can delegate to Topher, Lisen, Natasha, and Jim without drift.
- You speak for Youthfront. When ECFA or a major donor asks "What's your position on AI?" you (or Lisen, with your backing) answer in one voice.

Your ownership

Area · Owner · Your part

----- · ----- · -----

AI stance and board approval · Board + you · Bring the stance to the board; ensure it's adopted and reviewed at least annually.

Strategy and roadmap · Topher · You align the table; Topher drives prioritization and use-case order.

Donors and external comms · Lisen · You back her ownership; she can answer donors and ECFA.

Operations and inventory · Natasha · You expect a current inventory so policy matches reality.

Programs and formation · Jim · You back his gate on formation and youth; no AI decisions about kids.

Your next steps

1. Put the AI stance on the board agenda (with Tim/Cheryl). One-page policy: scope, limits, who owns what, youth/data rules.
2. Confirm with the exec team: Topher = strategy/inventory coordination; Lisen = donors/comms; Natasha = operations/inventory; Jim = programs/formation.
3. Once the stance is adopted, ensure Lisen (and you) have a one-line answer for donors: "We govern AI; humans approve every donor message and we don't put youth data in unvetted systems."
4. Schedule an annual review: stance, inventory, and any new risks or use cases.

Full guide: AI for Youthfront Core Leadership (index.md) — article, 10 rules, examples, and master strategy.

Your AI priorities — COO

One-page brief for Natasha Nikkel, COO. Full guide: AI for Youthfront Core Leadership (index.md).

Your role in AI governance

- You own AI in operations and administration. Where AI is used for efficiency (drafting, scheduling, internal tools), what is approved, and that it stays within the board-approved scope.
- You lead or coordinate the inventory. "Who uses what, where?" so the policy is grounded in reality. Topher may use it for the roadmap; the board uses it to calibrate the stance.
- You ensure nothing falls between the cracks. You don't have to approve every departmental use if ownership is clear (e.g. Lisen for donors, Jim for programs), but you make sure the org knows what's in use and that operations stay in scope.

Your ownership

Area · Your part

----- · -----

Inventory · Run or coordinate a simple survey: current and planned AI use across the org. Summarize for the exec team and board. Update when tools or use cases change.

Operations in scope · Admin and efficiency uses are documented and fit the board-approved boundaries. No tool goes live in operations without being in scope.

Handoff to owners · When a use case touches donors (Lisen), programs (Jim), or strategy (Topher), it's routed to the right owner. You keep the system coherent.

No shadow use · Encourage staff to report what they're using so the inventory stays accurate and policy can be updated.

Your next steps

1. Run a first-pass inventory: ask the exec team and key staff "What AI tools or uses do you or your area currently use or plan?" Compile a short summary.
2. Share the summary with Topher (for roadmap) and Mike (for board briefing). Use it to align the written policy with reality.
3. Define "in scope" for operations: e.g. drafting, scheduling, internal summaries—with the rule that donor data and youth data never go into public or unvetted AI.
4. Put the inventory on a review cycle (e.g. annually or when a new tool is proposed) so the board and exec team always have a current picture.

Full guide: AI for Youthfront Core Leadership (index.md) — article, 10 rules, examples, and master strategy.

Your AI priorities — EVP Strategic Initiatives

One-page brief for Topher Philgreen, EVP Strategic Initiatives. Full guide: AI for Youthfront Core Leadership (index.md).

Your role in AI governance

- You own the AI strategy and roadmap. Prioritization (governance and youth safety first, then donor intelligence, content, efficiency), use-case discovery, and coordination with the board-approved stance.
- You don't replace area owners. Lisen owns donors/comms; Natasha owns operations; Jim owns programs. You help the table decide what to do first and what to document.
- You tie AI to the single source of truth. Base (VIM, messaging, case for support) is the anchor for all content and comms AI; you help keep the roadmap aligned with that.

Your ownership

Area · Your part

----- · -----

Adoption order · Governance and youth safety first; then donor intelligence and revenue; then content and efficiency. No ad hoc adoption without the framework.

Inventory · Lead or coordinate a simple “what are we using or planning?” so the policy is grounded in reality. Natasha may run the operational side; you summarize for the board and roadmap.

Use-case prioritization · Work with the exec team to list and rank AI use cases; ensure each has a named owner (Lisen, Natasha, Jim) and fits the stance.

Board/CEO briefs · Support Mike (and the board) with a clear picture of current use, roadmap, and risks so the stance stays current.

Your next steps

1. Run a lightweight inventory: survey the exec team and key staff on current and planned AI use. Summarize for the leadership table.
2. Propose a simple adoption path (efficiency !' revenue !' quality !' ethics) and get alignment from Mike and the board.
3. Ensure every use case has an owner: Lisen (donors/comms), Natasha (ops), Jim (programs/formation). You hold the roadmap; they hold the boundaries.
4. Put the annual review on the calendar: stance, inventory, and roadmap in one conversation with the board.

Full guide: AI for Youthfront Core Leadership (index.md) — article, 10 rules, examples, and master strategy.

Your AI priorities — VP Development & Marketing

One-page brief for Lisen Tammeus Mann, VP Development & Marketing. Full guide: AI for Youthfront Core Leadership (index.md).

Your role in AI governance

- You own AI in fundraising and external communications. As donor contact (ECFA) and leader of development and marketing, you set the standard: donor data never in public or unvetted AI; every donor-facing message reviewed and approved by a human.^{1}
- You speak to donors and accreditors. When ECFA or a major donor asks how Youthfront uses AI, you (or Mike, with your input) answer clearly: we use it to support drafting and research; humans approve every message you receive; we don't put your data in unvetted systems.
- You anchor content to the Base. The case for support and messaging guide are the authority for all AI-assisted donor and marketing copy.

Your ownership

Area · Your part

----- · -----

Donor communications · Any AI-assisted appeal, thank-you, or update is reviewed and approved by you or a designee before it goes out. No “AI-only” publish.

Donor data · No donor PII (names, gift history, notes) in public or unvetted AI. Approved tools only; data in your control.

Transparency · Have a one-page summary of the org’s AI stance and ownership so you can answer donor and ECFA questions in one voice.

Marketing/content (external) · Same rule: human review and approval; voice and messaging aligned to the messaging guide.

Your next steps

1. Confirm the board-approved stance and your ownership of donor/comms AI with Mike and the board.
2. Establish a simple approval path: who reviews AI-drafted donor and marketing copy before it's sent? Document it.
3. Draft one paragraph (or one page) you can use when a donor asks: “How does Youthfront use AI?” Include: we use it to support drafting and research; humans approve every message; we protect your data.
4. Share that paragraph with Mike so you're aligned when either of you is asked.

Full guide: AI for Youthfront Core Leadership (index.md) — article, 10 rules, examples, and master strategy. See also: AI in Fundraising (../ai-fundraising-youthfront/index.md).

Footnote

<ol class="footnotes" aria-label="Footnotes">

<li id="fn1">Board roster — Lisen Tammeus Mann, donor contact per ECFA; content/governance/board-roster.md

Your AI priorities — VP Ministries

One-page brief for Jim Newberry, VP Ministries. Full guide: AI for Youthfront Core Leadership (index.md).

Your role in AI governance

- You own AI in programs and formation-adjacent use. Camp, neighborhood, and family ministries are where formation and youth safety live. You are the gate: no AI decisions about youth; no youth or vulnerable-family data in public or unvetted AI; formation content and curriculum human-designed and reviewed.^{^{1}}
 - You are the escalation path. When a use case blurs the line between “support” (e.g. scheduling, logistics) and “formation content or decision,” you confirm it is human-led and policy-compliant before it expands.
 - You default to human-led. Formation is “not a formula we enact”; ministry is “from true empathy and love.”^{^{2}}
- When in doubt, your area chooses the option that protects that.

Your ownership

Area · Your part

----- · -----

Youth and family data · No pasting youth names, family situations, or counseling notes into public or unvetted AI. Train staff; enforce the rule.

Formation content · Curriculum, reflections, or content that touches formation are created and approved by people with formational and theological competence. AI may assist only where explicitly governed and reviewed.

Decisions about youth · AI does not assess, rank, or decide outcomes for individual young people; humans do.

Support vs. formation · Scheduling, logistics, internal planning drafts, and resource organization are acceptable support uses. The encounter with youth and the content that shapes their formation are not.

Your next steps

1. Confirm with Mike and the board: you own the boundary for programs and formation. Any AI use that touches camp, neighborhood, or family ministries goes through you or your designee.
2. Communicate the rules to program and camp leads: no youth data in public AI; no formation content published without human design and review.
3. When a staff member proposes AI for formation-adjacent content (e.g. draft reflection, curriculum), require explicit approval and theological/formational review before use.
4. If a use case is ambiguous (e.g. “internal training draft for facilitators”), treat it as formation-adjacent until it’s clearly in the “support only” bucket.

Full guide: AI for Youthfront Core Leadership (index.md) — article, 10 rules, examples, and master strategy. See also: AI in Youth Formation (../ai-youth-formation-youthfront/index.md).

Footnotes

<ol class="footnotes" aria-label="Footnotes">
<li id="fn1">AI in Youth Formation guide — content/guides/ai-youth-formation-youthfront/index.md

<li id="fn2">Values, VIM — content/governance/values.md; content/governance/vim.md

Article

Christian nonprofits like Youthfront face a defining moment: artificial intelligence is already touching donor communications, content creation, program administration, and even the edges of formation and care. Without a clear stance, staff and vendors will make ad hoc choices that can conflict with mission and values. AI governance is not about fear—it is about stewardship: protecting who you are, whom you serve, and the trust you hold, while deciding where AI can help and where it must not go.^{1}

Youthfront's identity is explicit. They are "committed to creating holistic, missional environments for Christian formation." Transformation is "not a formula that we enact"; they "intentionally create environments of space, time, dialogue, hospitality and community" so that children and youth can "discover, explore and experience God."^{2} Their values—Community, Trust, Theological Reflection, Playfulness, and Christian Formation, Prayer and Ministry—function as strategic priorities. Ministry is "from true empathy and love instead of from a position of superiority"; they "learn from the other."^{3} That identity must drive every policy decision, including AI.

Why governance comes first. Without a board-level AI stance, the organization cannot coherently say what is in bounds or out of bounds. Who approves AI use in donor emails? In youth-facing content? In counseling or family programs? Scattered, uncoordinated use creates reputational, ethical, and compliance risk. ECFA and major donors will increasingly expect a stated position on AI—ethics, data, and authenticity.^{1} Having "nothing" is a growing liability.

What governance must cover. At minimum: (1) Scope and limits—where AI may and may not be used (e.g. administrative efficiency vs. formation or pastoral care). (2) Ownership and approval—who owns AI use in programs, marketing, fundraising, camp, and family ministries; what requires board or leadership sign-off. (3) Youth and vulnerable populations—Youthfront serves minors and families through camp, Arise, Teen Parent Connect, and counseling.^{4} Clear rules are non-negotiable: no AI making decisions about kids, no putting youth data into public or unvetted AI, and boundaries on AI-generated content that touches formation or care. (4) Documentation—an inventory of current and intended AI use so policy can be grounded in reality.

Aligning with mission. Governance is not a box to check. It is the way the organization says: our formation is not formulaic; our ministry is from empathy and love; theological reflection matters. AI use must be explicitly aligned with those commitments—or explicitly excluded where it would undercut them. When the board adopts a stance, it is protecting the very thing that makes Youthfront Youthfront.

10 rules

1. The board owns the AI stance. The organization's position on how and where AI is used—and not used—is a governance matter, not only an operational one.
2. Define scope before tools. Decide the boundaries of acceptable use (e.g. admin, content support, donor research) and no-go zones (e.g. formation content, decisions about youth, pastoral care) before adopting or expanding tools.
3. One owner per area. Clarify who is responsible for AI use in programs, marketing, fundraising, camp, and family ministries so it is never "someone else's problem."
4. No youth data in unvetted AI. Do not put minors' or vulnerable families' data into public or unapproved AI systems; treat this as a non-negotiable safeguard.
5. Inventory before policy. Document what is in use or planned (content, fundraising, admin) so the policy reflects reality and can be updated as use evolves.
6. Match AI use to stated values. Every approved use should be defensible in light of Community, Trust, Theological Reflection, and "learning from the other."
7. Require approval for high-stakes use. Donor communications, youth-facing content, and anything touching formation or care should have a defined approval path (leadership or board as appropriate).
8. Speak to donors and accreditors. Be able to state clearly how the organization governs AI—ethics, data, authenticity—for ECFA and major donors.
9. Review periodically. Revisit the stance and inventory at least annually or when use or risk changes.
10. Steward mission first. When in doubt, choose the option that protects formation, trust, and the "true empathy and love" at the heart of ministry.

5 examples: doing it right

1. Board adopts a one-page AI stance. The board approves a short policy: AI may be used for administrative efficiency, donor research (with data safeguards), and content drafting with human review; AI may not be used for decisions about youth, pastoral care, or formation content without explicit approval. Staff know the boundaries and who to ask.
2. Leadership assigns clear ownership. Programs, marketing, fundraising, camp, and family each have a named owner for AI use. New tools or use cases are routed to the right owner and, when needed, to leadership or board for approval.
3. Inventory before writing policy. The org runs a simple survey: “What AI tools or uses do you currently use or plan?” Results are summarized (e.g. ChatGPT for drafts, a donor-research tool). The policy is written to match that reality and to set limits where none existed.
4. Donor comms require human review. Any AI-assisted donor letter or appeal is reviewed by a human against the messaging guide and case for support before sending. The org can tell donors: “We use AI to support our work; humans approve every message you receive.”
5. Youth and family data stay off public AI. Staff are trained: no pasting youth names, family situations, or counseling notes into public chatbots or unvetted AI. Internal tools, if any, are approved and governed under the same stance.

5 examples: doing it wrong

1. No stance, ad hoc use. Staff use ChatGPT for donor emails and draft formation content with no policy. When a donor or ECFA asks “What’s your position on AI?” the org has no answer and no consistent practice.
2. Board defers entirely to staff. Leadership says “IT will figure it out.” No ownership at the board level, no clear scope, and no way to align AI with mission and formation values.
3. Youth data in public AI. A well-meaning staff member pastes de-identified but sensitive youth program notes into a public AI tool to “summarize themes.” The org has no rule against it and only discovers the practice later.
4. Policy written without an inventory. The board adopts a strict-sounding policy that does not account for tools already in use. Staff either ignore the policy or feel stuck, and compliance is inconsistent.
5. Formation content generated and published without review. AI drafts a reflection or curriculum piece; it goes out under the org’s name without theological or formational review, undercutting the value that “transformation is not a formula we enact.”

Master vision, intention, and means

Vision. Youthfront operates with a clear, board-owned stance on AI: everyone knows where AI may and may not be used, who owns it in each area, and how the organization protects minors, donors, and the integrity of formation and ministry. Donors and accreditors can point to a stated position; staff have guardrails that free them to use AI where it helps and to avoid it where it would betray mission.

Intention. Governance exists to steward the mission. Youthfront’s identity—formation as “not a formula,” ministry “from true empathy and love,” theological reflection, community, and trust—must direct every AI decision. The intention is not to block technology but to ensure that technology serves rather than undermines who Youthfront is and whom they serve. That alignment is what makes the stance credible and durable.

Means. The board adopts a concise AI policy (scope, limits, ownership, youth and data safeguards) and reviews it at least annually. Leadership assigns owners by area and defines approval paths for high-stakes use (donor comms, youth-facing or formation-adjacent content). An inventory of current and planned AI use is completed and updated as tools change. Staff are trained on the policy and on the rule: no youth or vulnerable-population data in public or unvetted AI. The single source of truth for identity and strategy (Base) is used to brief staff and to judge whether AI output is on-mission. When ECFA or donors ask, the organization can answer with one voice.

Article

Youthfront's heart is formation: "creating holistic, missional environments" where children and youth "discover, explore and experience God." Transformation is explicitly "not a formula that we enact"; it is the work of the Holy Spirit in "space, time, dialogue, hospitality and community."^{1} Ministry is "from true empathy and love instead of from a position of superiority"; they "learn from the other" and "create space for others' stories."^{2} That understanding shapes everything—including how, and whether, AI belongs in formation at all.</sup></sup>

Formation at Youthfront happens in camp (the "theological playground," rhythm of prayer, Scripture read with imagination), in neighborhood (shared table, Missional Journeys, Something To Eat, ImagineX), and in family ministries (Arise, Teen Parent Connect, Presence-Centered Counseling).^{3} It is relational, embodied, and communal. AI is none of those things. So the question is not "How do we use AI in formation?" but "Where might AI support the work around formation without replacing or undermining the human and spiritual encounter?"</sup>

Where AI does not belong. AI should not make decisions about youth. It should not replace the adult who "engages kids in conversations that foster wonder and encourage curiosity."^{3} It should not generate formation content (curriculum, reflections, pastoral responses) that goes to youth or families without explicit design and human oversight. It should not receive or process youth or vulnerable-family data in public or unvetted systems. Formation is "not a formula"; handing over formation content or decisions to an algorithm risks exactly the formulaic approach Youthfront rejects.</sup>

Where AI might support. AI can support the *infrastructure* of formation: scheduling, logistics, resource organization, first drafts of internal planning or training materials for staff. It can help summarize feedback or themes from evaluations—with data kept in governed systems—so facilitators can reflect and improve. It can assist in researching topics for adult formation or leadership development, with human curation. In every case, the *encounter* with youth and the *content* that touches their formation remain human-designed and human-led.

Governance is non-negotiable. The organization's AI stance must spell out that formation and youth-facing content are high-sensitivity areas. No AI in the loop for decisions about individual youth; no youth data in public AI; no formation curriculum or pastoral content generated and used without explicit approval and theological/formational review. The board and ministry leadership own this boundary.

10 rules

1. Formation encounter is human. The actual space, time, dialogue, and presence with youth are never delegated to AI; adults create the environment and the conversation.
2. No AI decisions about youth. AI does not assess, rank, or decide outcomes for individual young people; humans do.
3. No youth or vulnerable-family data in public or unvetted AI. Names, stories, or sensitive context stay out of consumer chatbots and unapproved tools.
4. Formation content is human-designed and reviewed. Curriculum, reflections, or content that touches formation are created and approved by people with formational and theological competence; AI may assist only where explicitly governed and reviewed.
5. Respect "not a formula." Do not use AI in ways that imply formation or transformation is a program we run or a set of steps we deliver; it is the Spirit's work in community.
6. Use AI for support, not presence. Scheduling, logistics, internal planning drafts, and resource organization are acceptable support uses; the encounter with youth is not.
7. Assign ownership for formation-adjacent AI. Ministry or formation leadership owns any AI use that touches formation infrastructure or content and ensures it stays within policy.
8. When in doubt, exclude. If a use case blurs the line between "support" and "formation content or decision," treat it as formation and require full human design and review.
9. Train staff on boundaries. Everyone in formation, camp, and family ministries knows: no youth data in public AI; no AI-generated content to youth without approval; formation is human-led.
10. Review formation AI use periodically. Revisit what is in use and whether it still aligns with the value that formation is relational, not formulaic.

5 examples: doing it right

1. Camp scheduling and logistics. Staff use an approved tool to optimize cabin assignments or activity blocks based on numbers and constraints. The tool does not see youth names or sensitive information; the actual pastoral and formational environment is designed and led by humans.
2. Internal training draft for facilitators. Adult training materials (e.g. “how to lead a debrief”) are drafted with AI, then rewritten and approved by formation leadership. The content is for staff development, not for youth; it is still reviewed for alignment with “learning from the other” and “true empathy and love.”
3. Thematic summary of evaluations. After a program cycle, staff use a governed system to summarize themes from participant feedback (aggregated, no identifying data in AI). Facilitators use the summary to reflect and improve; no individual youth is assessed or labeled by AI.
4. Research for adult formation. A staff member uses AI to gather and summarize resources on a topic (e.g. adolescent faith development) for an internal reading group or leadership development. The use is for adult learning; content that will reach youth is still written and approved by humans.
5. Clear policy for formation content. The org’s AI stance states: “No AI-generated formation or youth-facing content may be used without design and approval by formation/ministry leadership.” Staff know the line and do not push formation content through AI without that step.

5 examples: doing it wrong

1. AI-generated reflection or curriculum sent to youth. A staff member uses AI to write a devotion or small-group discussion guide and sends it to camp or neighborhood groups without formational or theological review. The content may be generic or at odds with “not a formula” and “learning from the other.”
2. Youth data in a public chatbot. Someone pastes de-identified but sensitive stories or feedback from youth into a public AI tool to “summarize themes.” The data is outside the org’s control and policy; the practice violates the rule that youth data stays out of unvetted AI.
3. AI used to “assess” or rank youth. A program uses an AI tool to score or categorize youth engagement or “growth.” Formation is treated as an outcome to be measured by an algorithm; that contradicts the commitment to formation as the Spirit’s work in relationship.
4. No clear boundary for formation. The org has an AI policy but does not explicitly name formation and youth-facing content as high-sensitivity. Staff assume AI is fine for “anything internal” and start using it for draft formation content without review.
5. Replacing human presence with AI-assisted content. To “scale,” the org considers sending AI-generated personalized reflections or check-ins to youth. That substitutes a formula for the human presence and dialogue that Youthfront’s formation depends on.

Master vision, intention, and means

Vision. Youthfront’s formation remains unmistakably human and Spirit-centered. AI, where used at all, supports only the infrastructure and adult side of formation—scheduling, planning, internal training, aggregated reflection—and never the encounter with youth or the content that shapes their formation. Youth and families experience formation as relationship and community, not as delivery of AI-generated content or AI-influenced decisions.

Intention. The intention is to protect what formation is: “not a formula we enact,” but the work of the Holy Spirit in space, time, dialogue, and community, with ministry “from true empathy and love.” AI that blurs into formation content or decisions would undermine that. So the intention is to draw a bright line: formation is human-designed and human-led; AI stays in support roles that do not touch the core encounter.

Means. The board-approved AI stance explicitly names formation and youth-facing content as high-sensitivity. No AI decisions about youth; no youth or vulnerable-family data in public or unvetted AI; no formation curriculum or pastoral content generated and used without design and approval by formation/ministry leadership. Ministry leadership owns formation-adjacent AI use and

trains staff on boundaries. Support uses (logistics, internal drafts, aggregated feedback summaries) are permitted only with data in governed systems and with clear separation from the formational encounter. The org reviews formation AI use periodically to ensure the line holds.

Article

Fundraising for a Christian nonprofit is both relational and strategic. Donors give to mission and trust; they also expect clarity, authenticity, and good stewardship of their data. Artificial intelligence can help development teams identify potential supporters, prioritize outreach, and draft communications—but only if it is governed, aligned with values, and transparent to donors.^{[1](#fn1)}

Youthfront's case for support is clear: they bring youth into a growing relationship with Jesus Christ, unmake dividing walls in neighborhoods, and assist the church in God's restorative work. YF Camp, YF Neighborhood, and YF Family serve more than 6,000 youth and families and partner with more than 200 churches annually.^{[2](#fn2)} Revenue and expense patterns show the reality many ministries face: variable contributions and the need for sustainable donor relationships.^{[3](#fn3)} Donor intelligence—understanding capacity, connections, and fit—can strengthen development without replacing the human relationship at the heart of giving.

Where AI can help. AI-assisted tools can support (1) Lead identification and prioritization—cross-referencing names from events, churches, or lists with regional wealth or prominence data to surface potential major donors or introducers. (2) Research efficiency—summarizing public information about prospects so staff spend less time gathering and more time relating. (3) Draft communications—appeals, thank-yous, or updates drafted with AI and then edited and approved by humans, anchored to the organization's messaging guide and case for support.^{[1](#fn1)} In each case, the human remains in the loop: AI informs and accelerates; people decide and relate.

Where guardrails matter. Donor data must be handled with care. Putting constituent information into public or unvetted AI systems risks privacy, trust, and compliance. Any use of AI in fundraising should be disclosed where appropriate (e.g. "we use tools to help us understand our community and tailor our outreach") and governed by the same ethics and governance stance the organization adopts for AI broadly.^{[4](#fn4)} Authenticity is central to Youthfront's values; donors should never receive messages that feel formulaic or inauthentic. AI-drafted copy must be reviewed, personalized, and aligned with the single source of truth for identity and messaging.

Tying AI to mission. When AI in fundraising is anchored to the Base—vision, intention, means, case for support, messaging guide—it supports consistency and frees staff to focus on relationship. The goal is not to replace the development officer but to help them steward time and attention so that more donors are reached with the right message at the right time, in a way that reflects Youthfront's mission and values.

10 rules

1. Govern fundraising AI under the org-wide AI stance. All donor-related AI use (research, drafting, segmentation) must fit within the board-approved scope and ownership.
2. Never put donor PII into public or unvetted AI. Names, contact details, gift history, or notes stay out of consumer chatbots and unapproved tools; use only approved, governed systems.
3. Human review for every donor-facing message. AI may draft; a human must approve and personalize every appeal, thank-you, or update before it reaches a donor.
4. Anchor drafts to the case for support and messaging guide. All AI-assisted fundraising copy is checked against Youthfront's single source of truth for identity and messaging.
5. Use donor intelligence for prioritization, not replacement of relationship. AI helps identify and rank prospects; staff own the actual cultivation and ask.
6. Be transparent when it's appropriate. Where donors or partners ask, be able to explain that the org uses tools to support research and communication, with human oversight.
7. Assign an owner for fundraising AI. Development or marketing leadership owns AI use in donor research and comms and ensures it aligns with policy.
8. Prefer tools that keep data in your control. When evaluating AI for donor intelligence or CRM, choose options that respect data residency and your governance requirements.
9. Avoid formulaic or generic tone. AI output should be edited so it sounds like Youthfront—relational, mission-centered, and authentic—not like a template.
10. Measure impact in relationship terms. Track not only dollars but whether AI is helping staff have more meaningful conversations and steward donor relationships well.

5 examples: doing it right

1. Cross-reference event attendees with regional data. Development uploads a list of names from a camp or neighborhood event (with appropriate consent/expectations). A governed tool matches against regional wealth or prominence data. Staff use the results to prioritize follow-up and personal outreach, not to send bulk AI-generated emails.
2. Draft appeal with AI, edit and approve with human. A staff member uses AI to generate a first draft of an annual appeal, then rewrites and personalizes it using the case for support and messaging guide. The final letter is approved by leadership and sent in the org's voice.
3. Research summary for a major-gift visit. Before a meeting, development uses an approved tool to summarize public information about the prospect (affiliations, giving elsewhere, interests). The summary is a briefing aid; the conversation is fully human and mission-focused.
4. Clear ownership and policy. The VP of Development & Marketing owns AI use in fundraising. All new tools or use cases are reviewed against the org's AI policy and data safeguards before adoption.
5. Donor asks about AI. When a donor asks "Do you use AI?" the org has a one-line answer: "We use some tools to help us research and draft, but every message you receive is reviewed and approved by our team—we want our communication to be personal and true to who we are."

5 examples: doing it wrong

1. Pasting donor lists into ChatGPT. A staff member pastes names and giving amounts into a public chatbot to "segment" or "prioritize." Donor data is now outside the org's control and policy; privacy and trust are at risk.
2. Sending AI drafts without review. An appeal is generated by AI and sent without a human edit. The tone is generic and doesn't match Youthfront's voice; donors notice and trust erodes.
3. No link to mission. AI is used to find "wealthy people" without filtering for affinity to youth ministry, formation, or the church. Outreach feels cold and transactional rather than mission-aligned.
4. No owner for fundraising AI. Different staff use different tools with no coordination or policy check. Some use unvetted tools; no one can speak for the org when donors or the board ask.
5. Hiding AI use. The org uses AI extensively for research and drafting but tells donors "we don't use AI." When discovered, credibility suffers; transparency from the start would have built trust.

Master vision, intention, and means

Vision. Youthfront's development work is sustainable and relationship-centered. AI supports donor intelligence and communication in ways that are governed, transparent, and aligned with mission. Staff spend less time on repetitive research and drafting and more time on cultivation and gratitude. Donors experience consistent, authentic communication that reflects who Youthfront is and why their support matters.

Intention. AI in fundraising serves the mission: bringing youth into relationship with Christ and unmaking dividing walls. It does so by strengthening the human capacity to identify, prioritize, and communicate with donors—not by replacing relationship with automation. Trust and authenticity remain non-negotiable; every use of AI must be defensible to donors, the board, and ECFA.

Means. The organization governs all fundraising AI under its board-approved AI stance. Development leadership owns implementation: approved tools for lead identification and research, with data kept in controlled systems; AI-assisted drafting only with human review and anchoring to the case for support and messaging guide. Donor data never enters public or unvetted AI. Staff are trained on policy and on editing AI output so it sounds like Youthfront. The impact of AI is evaluated in terms of relationship quality and mission alignment, not only revenue metrics. When donors or accreditors ask about AI, the org answers clearly and honestly.

Article

Digital content and communications are how Youthfront tells its story: website copy, social posts, newsletters, and program materials that invite youth, families, and churches into “holistic, missional environments for Christian formation.”^{1} Voice and messaging matter. The organization’s messaging guide stresses warmth, theological grounding, humility, and hope—and warns against implying that transformation is a “formula we enact.”^{2} When AI is used to draft or support content, it must serve that voice, not flatten it.

Artificial intelligence can help with volume and consistency: drafting social captions, summarizing events, suggesting headlines, or organizing content calendars. The risk is generic, off-voice output that sounds like every other nonprofit—or worse, that undercuts the very values Youthfront names. Formation is “not a formula”; ministry is “from true empathy and love instead of from a position of superiority.”^{3} AI-generated copy that feels templated or impersonal betrays that commitment. The goal, then, is to use AI where it clearly helps (efficiency, first drafts, consistency checks) while keeping the final word and the tone firmly human and on-mission.

Single source of truth. Youthfront’s identity and strategy live in the Base: vision, intention, means, messaging guide, case for support, program inventory.^{4} Any AI used for content should be briefed from that Base. Prompts and workflows should reference key messages, voice, and “do/don’t” rules so that drafts start closer to the mark. That reduces the chance of off-brand or theologically careless output and makes review faster and more focused.

Governance and approval. Content that represents the organization publicly—website, social, newsletters, donor communications—should be governed by the same AI stance the board adopts. Who approves AI-assisted content? What requires a theological or formational review? Defining this upfront avoids shadow use (e.g. staff publishing AI drafts without review) and keeps content aligned with mission and values.

Transparency and authenticity. Audiences may increasingly wonder whether content is human- or AI-generated. The organization does not need to label every post, but it should be able to say honestly how it uses AI: for support and efficiency, with human review and final approval, and always anchored to who Youthfront is. That clarity supports trust.

10 rules

1. Anchor all content AI to the messaging guide and Base. Use the single source of truth (key messages, voice, do/don’t) to brief AI and to evaluate every draft.
2. No AI-only publish. Every piece of external content that used AI in drafting must be reviewed, edited, and approved by a human before publication.
3. Preserve voice. Edit AI output until it sounds like Youthfront: warm, theologically grounded, humble, hopeful—never generic or formulaic.
4. Respect “not a formula.” Do not use AI to produce content that implies transformation or formation is a program we run rather than the work of the Spirit in space, time, and community.
5. Assign ownership for content AI. A clear owner (e.g. communications or marketing lead) ensures policy is followed and quality is consistent.
6. Define what needs extra review. Content that touches formation, theology, or vulnerable populations may need a second layer of review beyond the usual editor.
7. Use AI for efficiency, not replacement. Drafts, captions, and summaries are starting points; the value is in the human rewrite and the final alignment with mission.
8. Be honest when asked. If an audience or partner asks whether you use AI in content, answer clearly: we use it to support drafting; humans approve and shape everything we publish.
9. Keep internal content workflows documented. Know what is drafted with AI, what is edited, and what is approved so you can improve and audit.
10. Tie content to impact. Use concrete programs, places, and numbers (6,000 youth and families, 200 churches, Argentina, Camp West) so content stays specific and credible.

5 examples: doing it right

1. Draft newsletter with AI, then rewrite with messaging guide. Comms uses AI to generate a first draft of a monthly newsletter.

The editor rewrites it using the messaging guide—key messages, voice, and “don’t” list—and adds specific program updates and quotes. The final version is approved by leadership and clearly sounds like Youthfront.

2. Social captions briefed from Base. The person managing social uses a short brief drawn from the messaging guide (mission, vision, taglines, do/don’t) when prompting AI for caption ideas. They choose and edit the best option, add a concrete detail or story, and post only after review.

3. Website or program copy checked against voice. New program page copy is drafted with AI assistance, then line-edited so it uses “church-assisting,” “holistic, missional environments,” and avoids formulaic transformation language. A second reader checks for theological and voice alignment before publish.

4. Clear approval path for formation-adjacent content. Content that describes formation practices or ministry approach is routed to someone with theological or formational oversight in addition to the usual editor, so the org never publishes something that undercuts “learning from the other” or “true empathy and love.”

5. Transparent answer to “Do you use AI?” When a church partner or donor asks, the org says: “We use some tools to help us draft and stay consistent, but every word we publish is reviewed and approved by our team. We want our communication to reflect who we are.”

5 examples: doing it wrong

1. Publishing AI drafts without edit. A staff member generates a blog post with AI and publishes it with minimal changes. The tone is generic; it doesn’t mention Youthfront’s specific programs or theology. Readers notice it could be any organization.

2. AI copy that implies formulaic transformation. Draft language says “our program transforms youth in three steps” or “we deliver outcomes.” That contradicts the value that transformation is the work of the Spirit, not a formula—and it goes out without theological review.

3. No link to messaging guide. Content is drafted with AI using only a vague prompt. The output drifts from key messages, uses language that could imply Youthfront replaces the church, or overclaims impact. Review catches some issues but not all.

4. Shadow use with no ownership. Different staff use different AI tools for social, email, and web with no shared policy or quality bar. No one owns content AI; when leadership asks “what are we using?” there’s no clear answer.

5. Hiding or obscuring AI use. The org uses AI heavily for content but avoids the topic when asked. When it comes out later, trust is damaged; transparency from the start would have been safer.

Master vision, intention, and means

Vision. Youthfront’s digital content and communications are consistent, on-voice, and clearly rooted in mission and values. AI supports drafting and efficiency without diluting identity. Every public-facing piece is reviewed and approved by humans and anchored to the single source of truth. Audiences experience Youthfront as warm, theologically grounded, and authentic—whether or not AI was involved in the draft.

Intention. Content exists to invite people into the story: formation, belonging, and the church’s participation in God’s mission. AI serves that intention when it helps staff produce more and stay consistent; it betrays that intention when it makes content generic or at odds with “not a formula” and “true empathy and love.” The intention is to use technology in a way that strengthens, not weakens, the organization’s voice and credibility.

Means. The messaging guide and Base are the authority for all content. AI use for content is governed under the org’s AI stance, with a named owner (e.g. communications lead) and a defined approval path. All AI-assisted content is edited and approved by humans before publication; content that touches formation or theology gets an extra layer of review. Workflows are documented so the org knows what is drafted with AI and how it is revised. When asked, the org is transparent: AI supports drafting; humans own the final message.

AI Ethics & Governance: Mass Donor Intelligence for Youthfront

A guide for Youthfront leadership and board on the financial opportunity, ethical terrain, and governance framework for AI-powered donor prospecting at scale.

The Situation

An AI consultant has developed the capability to conduct mass OSINT (Open Source Intelligence) searches across the Kansas City metro region. The system can:

- Compile comprehensive lists of wealthy individuals in any geographic area
- Pull property data including home values, addresses, and ownership records
- Harvest LinkedIn profiles and professional network connections
- Cross-reference public filings (FEC contributions, SEC EDGAR, IRS 990s, ProPublica nonprofit data)
- Map relationship networks among donors, board members, and community leaders

The base dataset was built from the Federal Election Commission — 66,801 contribution records across 37 KC metro cities, deduplicated to 23,782 unique prospects. Further enrichment layers add property valuations, corporate affiliations, nonprofit board memberships, and philanthropic giving histories.

The cross-reference opportunity: Youthfront serves more than 6,000 youth and families a year through camp and programs. Parents sign registration forms. There is a list of families who have engaged with Youthfront — and a significant number of those families may overlap with the 23,782-name prospect list of high-capacity KC donors. Cross-referencing the two lists could surface major donor prospects who already have a relationship with the organization but have never been cultivated.

Additionally, this work would be supported by an agentic dashboard offering:

- Automated communications drafting and scheduling
- Strategic recommendations for cultivation sequencing
- Network mapping and relationship visualization
- Donor scoring and prioritization
- Portfolio management for major gift officers

This guide first examines what this could mean for Youthfront in dollars and cents, then turns to a thorough ethical assessment, and concludes with a scoring rubric that Youthfront can use to evaluate this and any future AI use case.

Part I: The Financial Case

Youthfront's Revenue Context

Fiscal Year · Total Revenue · Surplus / (Deficit) · Net Assets

-----	-----	-----	-----
Aug. 2025	· \$4,865,857	· (\$424,496)	· \$6,521,914
Aug. 2024	· \$5,630,985	· \$695,189	· \$6,888,102
Aug. 2023	· \$4,430,276	· \$19,062	· \$6,100,627
Aug. 2022	· \$3,709,695	· (\$162,120)	· \$6,037,939

Youthfront operates on roughly \$5M in annual revenue with variable year-to-year performance and a recent deficit. Fundraising

expenses run \$420K–\$540K/year. The organization is not in crisis, but revenue pressure is real and the margin for error is thin.

Industry Benchmarks: Fundraising Conversion Rates

The following rates are drawn from standard nonprofit fundraising research (AFP Fundraising Effectiveness Project, Bloomerang, DonorPerfect, and major gift literature). These are conservative center-of-range estimates for faith-based organizations of Youthfront's size.

Cold Prospecting (No Prior Relationship)

Metric · Rate · Source/Basis

----- · ----- · -----

Direct mail response rate · 0.5–2% · AFP / DMA nonprofit benchmarks

Cold email response rate · 1–3% · Nonprofit email benchmarks

Cold prospect !' first gift conversion · 1–3% · Industry standard for unsolicited outreach

Average first gift (cold) · \$50–\$150 · Small/mid nonprofit norm

Major gift qualification rate (cold list) · 0.1–0.5% · Prospect research industry consensus

Warm Prospecting (Prior Organizational Relationship)

Metric · Rate · Source/Basis

----- · ----- · -----

Warm prospect !' first gift conversion · 5–15% · Donors who already know the org

Lapsed donor reactivation rate · 5–10% · Bloomerang / DonorPerfect

Warm prospect average first gift · \$100–\$500 · Relationship-based solicitation

Warm !' major gift qualification · 2–5% · Prospect research for known constituents

Major Gift Pipeline (Qualified Prospects)

Metric · Rate · Source/Basis

----- · ----- · -----

Qualified prospect !' solicitation · 30–50% · After cultivation, discovery, and qualification

Solicitation !' gift closed · 30–50% · Standard major gift close rate

Average major gift (regional faith-based) · \$5,000–\$25,000 · AFP / faith-based org benchmarks

Cultivation cycle · 12–24 months · Standard major gift timeline

Lifetime value multiplier · 3–7x first gift · Donor retention and upgrade research

Modeling the Youthfront Opportunity

Let us model three tiers based on the stacked approach.

Tier 1: FEC Data Only (Public Record, No Cross-Reference)

What it is: 23,782 KC-area political donors identified from FEC filings. No enrichment, no cross-reference with Youthfront families. Pure cold outreach.

Step · Count · Calculation

----- · ----- · -----

Total prospects · 23,782 · FEC harvest

Reachable via mail/email · ~19,000 · 80% deliverability

Response / engagement · 380–570 · 2–3% response rate (targeted, not mass blast)

First gift conversion · 95–285 · 25–50% of responders

Average first gift · \$100 · Conservative for cold-to-warm

Year 1 revenue (first gifts) · \$9,500–\$28,500 ·

Major gift qualified · 24–119 · 0.1–0.5% of total list

Major gifts closed (Year 2–3) · 7–60 · 30–50% solicitation × 30–50% close

Average major gift · \$7,500 · Mid-range for KC faith-based

Major gift revenue (Year 2–3) · \$52,500–\$450,000 ·

3-Year Expected Value: \$62,000–\$478,500

But this tier has serious limitations: cold outreach to political donors with no Youthfront connection is expensive per dollar raised and risks brand dilution.

Tier 2: Cross-Referenced List (FEC + Youthfront Families)

What it is: Cross-reference the 23,782 FEC prospects against Youthfront's family database. Identify parents who (a) already have a camp/program relationship AND (b) appear as high-capacity donors in public records.

Assume Youthfront's family database contains 4,000–6,000 unique households from camp registrations, events, and church partnerships. Overlap with a KC-metro political donor list of 23,782 would plausibly yield 200–600 matched households (5–10% overlap based on typical suburban KC demographics and political giving rates).

Step · Count · Calculation

----- · ----- · -----

Matched prospects (warm + wealthy) · 200–600 · Cross-reference overlap

Warm outreach engagement rate · 20–35% · They already know Youthfront

First gift conversion · 40–210 · Warm list, known org

Average first gift · \$250 · Relationship + capacity

Year 1 revenue (first gifts) · \$10,000–\$52,500 ·

Major gift qualified · 10–30 · 2–5% of matched list

Major gifts closed (Year 2–3) · 3–15 · Pipeline conversion

Average major gift · \$10,000 · Warm + high capacity

Major gift revenue (Year 2–3) · \$30,000–\$150,000 ·

3-Year Expected Value: \$40,000–\$202,500

This is where the cross-reference becomes powerful: smaller list, dramatically higher conversion rates, and each prospect already has a story about why Youthfront matters to their family. The cost-per-dollar-raised drops significantly.

Tier 3: Full Stack (Cross-Reference + Enrichment + Agentic Dashboard)

What it is: The matched list from Tier 2, plus:

- Property data and home valuations (capacity confirmation)
- LinkedIn profiles and professional context (relationship mapping)
- Network mapping (who knows whom on the board, at partner churches)
- AI-drafted personalized outreach, cultivation plans, and ask strategies
- Dashboard with portfolio management, communication scheduling, and progress tracking

Step · Count · Calculation

----- · ----- · -----

Matched + enriched prospects · 200–600 · Same cross-reference base

Prioritized A-list (confirmed capacity + affinity) · 50–150 · Top quartile after enrichment scoring

Discovery meetings secured · 25–75 · 50% acceptance for known families

Qualified for solicitation · 15–50 · After discovery, cultivation

Major gifts closed (12–24 months) · 8–25 · 50% close rate with full cultivation support

Average major gift · \$15,000 · Higher due to capacity confirmation and personalization

Major gift revenue (Year 1–2) · \$120,000–\$375,000 ·

Mid-level donor conversions · 40–120 · From remaining matched list

Average mid-level gift · \$500 ·

Mid-level revenue (Year 1) · \$20,000–\$60,000 ·

Lifetime value (3–5 year horizon) · — · 3–5x first gift, upgraded annually

Projected 5-Year Lifetime Value · \$420,000–\$1,300,000+ ·

3-Year Expected Value: \$250,000–\$700,000+

Summary Financial Comparison

Tier · Approach · 3-Year Expected Value · Cost to Implement · Ethical Complexity

----- · ----- · ----- · ----- · -----

- 1 · Cold FEC list only · \$62K–\$478K · Low (\$0–\$500/mo) · Moderate
- 2 · Cross-reference with YF families · \$40K–\$202K · Low-Medium · High
- 3 · Full stack + agentic dashboard · \$250K–\$700K+ · \$18K–\$28K/yr · Very High

For an organization running a \$424K deficit, Tier 3 could represent a 60–165% offset of that deficit in Year 1, with compounding returns as the major gift pipeline matures.

The financial case is strong. But the financial case is not the only case that matters.

Part II: The Ethical Assessment

Why This Requires Serious Ethical Reflection

This is not a question of "should Youthfront raise money?" or even "should Youthfront use data to inform fundraising?" Every nonprofit does prospect research. The question is about scale, method, and the nature of the relationship between the organization and the people it serves.

Youthfront's values state:

"We nurture a culture of trust based on interpersonal values that guide us toward a healthy community."

"We strive to bear witness to the Good News through our words, actions, and service."

"We create space for others' stories and strive to serve from true empathy and love instead of from a position of superiority."

The ethical question is whether mass AI-powered donor intelligence — even when built on public data — is compatible with these commitments.

The Five Ethical Dimensions

1. Consent and Reasonable Expectation

The question: When a parent signs a camp registration form, do they reasonably expect that Youthfront might cross-reference their name against political donation records, property valuations, and LinkedIn profiles to assess their giving capacity?

The honest answer: No. Most parents signing a camp form expect that their information will be used for camp-related communication and perhaps general fundraising appeals. They do not expect to be run through a wealth-screening pipeline.

What the law says: In most U.S. jurisdictions, this is technically legal. FEC data is public. Property records are public. LinkedIn profiles are public. Cross-referencing public data is not prohibited. But legal is not the same as ethical, and it is certainly not the same as what Youthfront's values demand.

The standard in the field: Prospect research is a recognized profession (APRA — Association of Professional Researchers for Advancement). APRA's ethics guidelines emphasize that prospect research should:

- Use only legally obtained information
- Maintain confidentiality of research findings
- Support the donor's autonomy and dignity
- Not collect information that has no reasonable connection to the fundraising relationship

The cross-reference itself is within APRA norms. The *scale* and *automation* push into newer territory.

2. Proportionality and Necessity

The question: Is mass OSINT harvesting of 23,782 prospects proportionate to Youthfront's actual fundraising need?

Youthfront has a development team (led by Lisen Tammeus Mann) that works with ~200 churches and thousands of families. A targeted approach — starting from known relationships and using prospect research to qualify the most promising — is standard and proportionate.

A 23,782-person regional wealth database is a qualitatively different thing. It is not "research on our known donors." It is a surveillance-grade intelligence product applied to an entire metropolitan area's donor class, then cross-referenced against families who trusted the organization with their children.

The question of proportionality is: does the organization need a regional intelligence database, or does it need better research on the 200–600 families it already knows?

3. Power Asymmetry and the "Position of Superiority"

Youthfront's own values warn against serving "from a position of superiority." When an organization knows a family's home value, political donations, employer, professional network, and estimated wealth — and the family does not know the organization possesses this information — there is an information asymmetry that creates a power dynamic.

This is especially acute when the families in question trusted the organization with their children. The relationship was pastoral and formational. Repurposing that trust for financial intelligence — even with good intentions — risks converting a ministry relationship into an extractive one.

4. Data Aggregation and the Mosaic Effect

Individual pieces of public data are benign. A name in an FEC filing. A property record. A LinkedIn profile. But when AI aggregates these into a unified dossier — name, address, home value, employer, political donations, nonprofit board memberships, estimated wealth, family members, church affiliation — the result is qualitatively different from any single data point.

This is known as the mosaic effect: individually harmless data points that, when combined, create a portrait that the subject never consented to and might find deeply invasive.

For a faith-based organization that values "trust" and "community," the mosaic effect is a serious concern. Would a Youthfront parent feel comfortable knowing the organization had assembled this kind of profile? Would it strengthen or damage the relationship?

5. Mission Integrity and Witness

Youthfront exists to bring "youth into a growing relationship with Jesus Christ" and to make "a world where everyone belongs." Its programs are designed to "unmake the dividing walls."

Mass wealth screening inherently sorts people by economic value. It identifies the wealthy and prioritizes them. It is, by design, a system that sees people through the lens of their financial capacity.

This does not mean it is wrong — every nonprofit must raise money, and major gifts are essential to sustainability. But there is a difference between:

- "We discovered through conversation that this family cares deeply about our mission and has the means to make a significant gift"
- "We ran 6,000 families through a wealth-screening AI and identified the 150 richest ones"

The second approach is more efficient. It may also be corrosive to the culture of trust, belonging, and equality that Youthfront claims as foundational.

The Gradient of Ethical Concern

Not all approaches within this system carry equal ethical weight. Here is the spectrum:

Level · Description · Ethical Concern

----- · ----- · -----

A · Manual prospect research on known major donors using public sources · Low — Standard practice, proportionate, targeted

B · AI-assisted research on known donors (faster, more comprehensive) · Low-Moderate — Same scope, more efficient

C · Cross-referencing Youthfront family list against public FEC data to identify overlap · Moderate — Repurposes ministry data for fundraising; consent gap

D · Enriching matched names with property, LinkedIn, employer, and network data · Moderate-High — Mosaic effect; dossier-level profiling

E · Building a regional 23,782-person wealth database and cross-referencing against all Youthfront contacts · High — Surveillance-scale; far exceeds proportional need

F · Agentic dashboard automating outreach, cultivation, and strategy using enriched profiles · Very High — Removes human discernment from relationship; commodifies trust

Part III: The Rubric

Non-Profit AI Ethics Scoring Framework (NAES-100)

The following rubric provides a 0–100 score for evaluating any AI use case in a nonprofit context. It is designed to be applied by leadership or a governance committee, scored collaboratively, and documented for accountability.

Scoring Dimensions

Each dimension is scored 0–20. Total score = sum of all five dimensions.

Dimension 1: Legal and Compliance Foundation (0–20)

Score · Criteria

----- · -----

0–4 · Use involves data or methods with unclear legality; no legal review

5–8 · Technically legal but untested; no organizational policy covers this use

9–12 · Legal and covered by existing organizational policy; no accreditor guidance

13–16 · Legal, policy-covered, and consistent with ECFA/accreditor standards; documented

17–20 · Fully vetted by legal counsel; explicit board approval; accreditor-aligned; audit-ready

Dimension 2: Consent and Transparency (0–20)

Score · Criteria

----- · -----

0–4 · Data subjects have no knowledge their information is being used this way; no opt-out

5–8 · Data is public, but subjects would likely be surprised by this use; no disclosure

9–12 · Use is disclosed in general terms (e.g., privacy policy mentions "prospect research"); no specific consent

13–16 · Subjects are informed of the specific use; opt-out is available and honored

17–20 · Explicit, informed consent obtained; full transparency about methods; subjects can access their profile

Dimension 3: Proportionality and Necessity (0–20)

Score · Criteria

----- · -----

0–4 · Scope far exceeds organizational need; data collected on populations with no relationship to org

5–8 · Broad scope with limited targeting; most data collected will never be used

9–12 · Scope is reasonably related to organizational need; some excess but defensible

13–16 · Tightly scoped to known constituents and specific fundraising objectives

17–20 · Minimally scoped; only data directly necessary for a defined, approved purpose; regularly purged

Dimension 4: Mission Alignment and Values Integrity (0–20)

Score · Criteria

----- · -----

0–4 · Use contradicts stated values; treats people as means to financial ends; erodes trust

5–8 · Use is in tension with values; could be perceived as manipulative or extractive

9–12 · Use is neutral relative to values; does not advance or undermine mission

13–16 · Use supports mission effectiveness while maintaining relational integrity

17–20 · Use deepens mission impact; strengthens trust; people are treated with dignity throughout

Dimension 5: Human Oversight and Relationship Primacy (0–20)

Score · Criteria

----- · -----

0–4 · Fully automated; no human review of profiles, outreach, or decisions; AI drives the relationship

5–8 · Humans review outputs but AI sets priorities and frames the interaction

9–12 · Humans make key decisions (who to approach, what to say); AI supports with research and drafting

13–16 · AI is a research and efficiency tool; all relationship decisions and communications are human-led

17–20 · AI supports administrative tasks only; all prospect engagement is fully human-driven and relationship-first

Score Interpretation

Score · Rating · Guidance

----- · ----- · -----

85–100 · Green — Proceed · Use case is well-governed, ethical, proportionate, and mission-aligned. Document and monitor.

70–84 · Yellow-Green — Proceed with guardrails · Generally sound but has areas needing policy, disclosure, or scope adjustment. Address gaps before scaling.

55–69 · Yellow — Caution · Significant ethical questions remain. Do not proceed without board discussion, policy changes, or scope reduction.

40–54 · Orange — Serious concern · Multiple dimensions score poorly. Proceed only with major restructuring of the approach, explicit board approval, and ongoing review.

Below 40 · Red — Do not proceed · Use case is incompatible with nonprofit ethics, organizational values, or both. Redesign fundamentally or decline.

Applying the Rubric: Scoring Each Tier

Level A: Manual Prospect Research on Known Major Donors

Dimension · Score · Rationale

----- · ----- · -----

Legal & Compliance · 18 · Standard practice; APRA-aligned; legal

Consent & Transparency · 14 · Public data; donors expect some research; not explicitly disclosed

Proportionality · 18 · Tightly scoped to known, qualified prospects

Mission Alignment · 17 · Supports sustainability; relational; human-driven

Human Oversight · 19 · Fully human process

Total · 86 · Green — Proceed

Level B: AI-Assisted Research on Known Donors

Dimension · Score · Rationale

----- · ----- · -----

Legal & Compliance · 17 · Legal; needs AI policy coverage

Consent & Transparency · 13 · Same scope as manual, but AI involvement adds a disclosure consideration

Proportionality · 17 · Same scope, more efficient; slight mosaic risk

Mission Alignment · 16 · Efficiency gain; relationship still human-led

Human Oversight · 17 · AI researches, human decides and acts

Total · 80 · Yellow-Green — Proceed with guardrails

Recommended guardrails: Adopt AI use policy; document AI's role in prospect research; ensure Lisen's team reviews all AI-generated profiles.

Level C: Cross-Referencing Youthfront Families Against FEC Data

Dimension · Score · Rationale

----- · ----- · -----

Legal & Compliance · 15 · Legal; FEC is public; but no policy explicitly covers cross-referencing ministry lists with political data

Consent & Transparency · 8 · Parents signed camp forms, not fundraising consent; would likely be surprised

Proportionality · 12 · Reasonable scope (only existing families) but repurposes pastoral data

Mission Alignment · 10 · Converts ministry relationship to fundraising lead; tension with "trust" and "not from superiority"

Human Oversight · 15 · Cross-reference is automated but follow-up would be human

Total · 60 · Yellow — Caution

Required before proceeding: Board-level discussion and approval. Update privacy disclosures on all registration forms. Offer opt-out from fundraising communications. Establish a clear wall between program data and development data with documented access controls.

Level D: Enriched Profiles (Property, LinkedIn, Network Mapping)

Dimension · Score · Rationale

----- · ----- · -----

Legal & Compliance · 13 · All sources public/legal; but aggregation into dossiers needs legal review and policy

Consent & Transparency · 6 · Mosaic effect; subjects would not expect this level of profiling from a youth camp

Proportionality · 9 · Goes beyond "who should we talk to" into "what do we know about them they don't know we know"

Mission Alignment · 8 · Power asymmetry; information advantage over families who trusted org with their children

Human Oversight · 13 · Research is automated; decisions still human

Total · 49 · Orange — Serious concern

Required before proceeding: Explicit board vote. Legal counsel review. Significant scope reduction (e.g., enrichment only for prospects who have expressed interest in supporting the org). Full transparency policy: if someone asks what Youthfront knows about them, the org can and will disclose. Strict data retention limits.

Level E: Regional 23,782-Person Wealth Database

Dimension · Score · Rationale

----- · ----- · -----

Legal & Compliance · 12 · Legal but regulatory environment is evolving; no nonprofit norm for this scale

Consent & Transparency · 4 · Vast majority have no relationship with Youthfront; no consent, no awareness

Proportionality · 4 · 23,782 people profiled; org serves ~6,000 families; massive over-collection

Mission Alignment · 6 · Surveillance-scale intelligence product; antithetical to "everyone belongs" if only the wealthy are targeted

Human Oversight · 10 · List is automated; prioritization is algorithmic

Total · 36 · Red — Do not proceed (as-is)

Assessment: A regional wealth database of this scale is not proportionate to Youthfront's needs or values. The data may have been collected legally, but deploying it under Youthfront's name and mission creates reputational, ethical, and relational risk that outweighs the financial upside.

If the data already exists: It should not be cross-referenced with Youthfront family data without the governance steps outlined in Level C and D. Consider whether the database should be held by the consultant (not Youthfront) and used only in a filtered, governed manner.

Level F: Full Agentic Dashboard with Automated Cultivation

Dimension · Score · Rationale

----- · ----- · -----

Legal & Compliance · 11 · Legal but novel; no regulatory or accreditor framework covers agentic fundraising

Consent & Transparency · 5 · AI-drafted communications to people profiled without their knowledge

Proportionality · 7 · Dashboard implies ongoing, systematic surveillance of donor behavior and capacity

Mission Alignment · 5 · "True empathy and love" is difficult to claim when an AI is strategizing the relationship

Human Oversight · 8 · AI frames strategy, drafts communications, and tracks cultivation; human is reviewer, not driver

Total · 36 · Red — Do not proceed (as configured)

Assessment: A fully agentic dashboard that automates cultivation strategy and communication crosses the line from "tool that supports fundraising staff" to "system that drives the donor relationship." For an organization whose identity is built on authentic human relationship, this configuration undermines the very thing that makes Youthfront's ask credible.

Reconfiguration path: The dashboard technology itself is not the problem. Reconfigure it as a research and administrative tool (Level B functionality) rather than a relationship-driving system, and the score improves significantly. Specifically:

- Dashboard provides research summaries — staff decide who to approach and how
- Dashboard tracks activity and deadlines — staff own all communication
- Dashboard does NOT draft donor-facing messages or recommend cultivation strategies
- Dashboard does NOT automate outreach sequences

Reconfigured this way, the dashboard scores closer to Level B (75–82 range).

Score Summary

Level · Approach · Score · Rating

----- · ----- · ----- · -----

A · Manual prospect research on known donors · 86 · Green

B · AI-assisted research on known donors · 80 · Yellow-Green

C · Cross-reference YF families × FEC data · 60 · Yellow — Caution

D · Enriched profiles (property, LinkedIn, networks) · 49 · Orange

E · Regional 23,782-person wealth database · 36 · Red

F · Full agentic dashboard (as configured) · 36 · Red

F' · Agentic dashboard (reconfigured as research tool) · ~78 · Yellow-Green

Part IV: Recommendations for Youthfront

What We Recommend

1. Proceed immediately with Levels A and B. AI-assisted prospect research on known donors is standard, ethical, and high-ROI. Adopt an AI use policy first (see the AI Governance Guide), then equip Lisen's team.

2. Proceed with Level C only after governance steps. The cross-reference is where the real financial opportunity lives — warm prospects with confirmed capacity. But it requires:

- Board discussion and explicit approval
- Updated privacy language on all registration and event forms
- Opt-out mechanism for families who do not wish to be included in fundraising research
- Documented data handling procedures separating program data from development data

3. Approach Level D with extreme caution. Enrichment should be reserved for prospects who have (a) been identified through the cross-reference AND (b) responded positively to initial outreach. Do not build enriched profiles on families who have not signaled openness to a fundraising relationship.

4. Do not deploy the regional database (Level E) under Youthfront's name. If the data exists with the consultant, it can inform general market understanding, but it should not be directly cross-referenced with Youthfront family data or used for outreach without the filtering described above.

5. Reconfigure the dashboard (Level F !' F'). The technology is valuable. The configuration matters. Rebuild it as a research-and-administration tool, not a relationship-driving system. Every donor-facing communication and cultivation decision must be human-originated, not AI-suggested.

The Ethical North Star

The question Youthfront should keep asking is not "Is this legal?" or even "Is this effective?" but:

"If the families we serve knew exactly what we were doing with their information and how we were using AI in our fundraising, would they trust us more or less?"

Any approach that passes this test is likely ethical. Any approach that fails it — regardless of its financial return — is a threat to the mission.

Projected Revenue Under the Recommended Path

If Youthfront adopts Levels A, B, C (governed), and D (limited), with a reconfigured dashboard:

Timeframe · Projected New Revenue · Basis

----- · ----- · -----

Year 1 · \$50,000–\$120,000 · Mid-level gifts from cross-referenced warm list; 2–5 major gift discoveries

Year 2 · \$120,000–\$300,000 · Major gift pipeline matures; 5–15 gifts closed

Year 3 · \$200,000–\$450,000 · Upgraded gifts; new major donors fully cultivated

3-Year Total · \$370,000–\$870,000 ·

This represents 70–170% of the FY2025 deficit in Year 1 alone, scaling to a potentially transformative revenue stream — achieved within ethical bounds.

The financial opportunity does not require the ethically problematic tiers. The governed path captures the majority of the upside while protecting what makes Youthfront worth supporting in the first place: trust, relationship, and a genuine commitment to a world where everyone belongs.

Appendix: Using the NAES-100 Rubric for Future AI Decisions

This rubric is not specific to donor intelligence. Youthfront can apply the same five dimensions — Legal & Compliance, Consent & Transparency, Proportionality, Mission Alignment, and Human Oversight — to any AI use case:

- AI-generated content for social media or newsletters
- AI tools in youth formation or camp programming
- AI for operational efficiency (scheduling, logistics, reporting)
- AI in counseling support or family services

Process:

1. The use case owner (per the AI Governance Guide) describes the proposed use
2. Leadership scores each dimension independently, then discusses
3. The average score determines the rating and required governance steps
4. Scores, rationale, and decisions are documented
5. Scores are revisited annually or when the use case changes

This framework ensures that Youthfront's AI adoption is deliberate, governed, and mission-first — not reactive, ad hoc, or driven solely by what is technically possible.

Prepared for Youthfront leadership and board. March 2026.

Article

Leading a Christian nonprofit in the age of AI means making deliberate choices: where to adopt, where to limit, and how to align technology with mission, values, and trust. Leadership is not about being first or last with AI; it is about being clear and responsible—so that staff, donors, and the people you serve know where the organization stands and how it will act.^{1}

Youthfront's context is familiar to many faith-based ministries: a church-assisting organization with camp, neighborhood, and family ministries; formation that is "not a formula we enact" but the work of the Spirit in community; values of trust, theological reflection, and "true empathy and love."^{2} Revenue is variable; capacity is finite; donors and accreditors like ECFA will increasingly ask about AI and data.^{3} AI leadership here means ordering priorities: governance and youth safety first, then donor intelligence and sustainability, then content and efficiency—and doing it in a way that does not require a full-time AI officer but does require board and leadership ownership.^{1}

Four dimensions of value. A useful frame for AI leadership is to ask where AI can create value without undermining mission: (1) Efficiency and time—administrative tasks, drafting, research—so staff reallocate hours to relationship and mission. (2) Revenue—donor intelligence, lead identification, and communication that support sustainability while staying ethical and transparent. (3) Quality—clearer strategy, consistent messaging, better content and engagement, all anchored to who the organization is. (4) Ethics and governance—documenting concerns, setting boundaries, and governing every use so the journey stays responsible and auditable.^{1} None of these is optional for serious leadership; the order matters. Governance and youth safety are prerequisites; efficiency and adoption roadmap follow.

What leadership must do. Board and senior leaders must (a) Adopt a stance—how and where the organization will and will not use AI, and who approves. (b) Assign ownership—who owns AI in programs, fundraising, content, and formation so it is never "someone else's problem." (c) Protect minors and vulnerable populations—no AI decisions about youth; no youth data in public or unvetted AI; clear boundaries on formation and care. (d) Address donor and accreditor expectations—be able to state the position on AI, ethics, and data when asked. (e) Support a structured path—once governance and safety are in place, a journey (efficiency !' revenue !' quality !' ethics) helps the org adopt in order rather than ad hoc.^{4}

Meeting capacity where it is. Many ministries cannot run a large AI initiative. Leadership that succeeds will choose a path that meets the org where it is: a single source of truth (Base) for identity and strategy; clear policy; and accompaniment or tools that help prioritize use cases and document decisions without requiring a dedicated AI team from day one.

10 rules

1. Board and leadership own the AI stance. The organization's position on AI is a governance and leadership responsibility, not only IT or operations.
2. Order priorities: governance and safety first. Before scaling AI use, adopt policy, assign ownership, and protect youth and vulnerable populations; then pursue efficiency, revenue, and quality.
3. One source of truth for identity and strategy. Maintain a single Base (vision, intention, means, messaging, case for support) so all AI use can be briefed and evaluated against who the org is.
4. Assign clear ownership by area. Programs, fundraising, content, and formation each have a named owner for AI use and approval.
5. No youth or vulnerable-family data in public or unvetted AI. Treat this as non-negotiable; train staff and enforce.
6. Be able to answer donors and accreditors. When ECFA or major donors ask "What's your position on AI?" have a clear, honest answer ready.
7. Use a structured adoption path. Efficiency !' revenue !' quality !' ethics gives a sequence that matches risk and value; avoid ad hoc adoption without governance.
8. Document use and concerns. Keep an inventory of what is in use or planned; document ethics concerns and approval paths so the journey is auditable.
9. Meet the org where it is. Do not assume a full-time AI role or a big project; choose governance and a few high-value use cases that fit capacity.
10. Align every use with mission and values. If a use cannot be defended in light of formation, trust, and "true empathy and love," do not adopt it.

5 examples: doing it right

1. Board adopts AI as a standing agenda item. Once a year (or when use changes), the board reviews the AI stance, inventory, and any new use cases. Leadership reports on ownership, boundaries, and donor/accreditor readiness. Governance stays visible.
2. Leadership maps value in order. The team lists possible AI uses (admin, donor research, content, formation support) and sorts them: governance and youth safety first; then donor intelligence and revenue; then content and efficiency. They pursue in that order and say no to uses that would skip governance.
3. Single Base for identity and messaging. The org invests in one place where VIM, messaging guide, case for support, and key governance docs live. All content and fundraising AI is briefed from that Base; staff and vendors know where to look for “who we are.”
4. Structured journey with accompaniment. Instead of “everyone try ChatGPT,” the org works with a partner or internal lead to run workshops: efficiency use cases first, then revenue (donor intelligence), then quality (content), with ethics checkpoints throughout. Use cases are documented and approved.
5. Clear answer for ECFA or donors. When asked about AI, the CEO or board chair can say: “We have a board-approved stance. We use AI in defined areas—admin, donor research, content support—with human oversight and no youth data in unvetted systems. We’re happy to share our approach.”

5 examples: doing it wrong

1. Leadership defers entirely. “Let the staff figure it out.” No board stance, no ownership, no order of priorities. Tools are adopted ad hoc; when something goes wrong or a donor asks, no one can speak for the org.
2. Chasing revenue before governance. The org rushes to adopt donor-intelligence or content AI without a policy or ownership. Data and ethics questions surface later; reputational risk and confusion follow.
3. No single source of truth. Identity and strategy live in scattered documents and heads. AI is briefed with inconsistent or generic prompts; output is off-voice and hard to govern because there is no canonical “who we are.”
4. Youth data or formation content ungoverned. Staff use AI for formation-adjacent content or put youth-related data into public tools because “we didn’t have a rule.” Leadership discovers it only after the fact; the board has to retrofit policy.
5. Overbuilding for capacity. The org commits to a large AI roadmap, a full-time AI role, or many tools at once. Capacity is stretched; governance and safety get short shrift. A smaller, ordered set of priorities would have been more effective.

Master vision, intention, and means

Vision. Youthfront is led with clarity and responsibility on AI: the board and leadership own the stance; staff know the boundaries and who to ask; donors and accreditors receive a clear, honest account of how AI is used. The organization adopts AI in an ordered way—governance and youth safety first, then donor intelligence, content, and efficiency—so that technology serves mission and values instead of undermining them.

Intention. AI leadership exists to steward the mission. The intention is not to resist or to rush, but to decide deliberately: where AI helps (efficiency, revenue, quality) and where it must not go (formation content, decisions about youth, ungoverned data). Leadership that succeeds will align every use with Youthfront’s identity—formation as “not a formula,” ministry “from true empathy and love”—and will meet the org’s capacity with a realistic, structured path.

Means. The board adopts and periodically reviews an AI stance (scope, limits, ownership, youth and data safeguards). Leadership assigns owners by area and maintains a single source of truth (Base) for identity and strategy. A structured adoption path (efficiency ! revenue ! quality ! ethics) guides which use cases are pursued and in what order. Donor and accreditor readiness is built in: the org can state its position and show documented policy and inventory. Capacity is respected: the journey is designed so it does not require a full-time AI officer from day one but does require consistent board and leadership attention.

Phase 1: Harvest the Org-Side Network

Before you can match connections, you need a structured dataset of who Youthfront's people know. This is the side most orgs never build.

1A. Board & Staff LinkedIn Connections

What you have now: insiders-linkedin.json with enriched LinkedIn profiles for board members and key staff. The LinkedIn MCP server with 100 lookups/day.

What you need: Each insider's actual connection list — not just their profile, but *who they're connected to.*

How to get it:

Method · Yield · Difficulty · Notes

----- · ----- · ----- · -----

Ask each board member to export their LinkedIn connections · Full list (CSV with name, company, title) · Easy — but requires cooperation · LinkedIn Settings !' Data Privacy !' Get a copy of your data !' Connections. Each person gets a CSV in ~24 hours. This is the gold standard.

LinkedIn MCP get_person_profile on known names · Profile data, not connection lists · Easy — already wired · Use for enriching known contacts, not for discovering connections

Manual board interview · 20–50 names per person in 30 minutes · Medium — requires scheduling · Sit with each board member: "I'm going to read names. Tell me if you know them." Old school. Still works.

The ask to the board: This is a governance moment. The VP of Development (Lisen) or CEO (Mike) frames it:

"We're building a tool to help us discover which prospects in the KC area you already know — so we can ask you for warm introductions instead of cold-calling strangers. Would you be willing to export your LinkedIn connections so we can run the match? The data stays internal, is used only for this purpose, and we'll show you the results before we act on any of them."

Target: Get LinkedIn exports from at least 5 of 9 board members + 3–5 senior staff. That gives you 1,000–2,500 connections with name, employer, and title.

Data format (LinkedIn CSV export):

```

`csv
First Name,Last Name,Email Address,Company,Position,Connected On
Sarah,Chen,,Polsinelli PC,Partner,2019-03-15
David,Adler,,Sprint,VP Engineering,2017-06-22
`

```

1B. LittleSis Network Expansion

What you have now: 139 network connections from 11 seed entities in the harvester output (raw-littlesis.json). These are KC power players — Cerner execs, Stowers family, Kemper family, Lamar Hunt family, etc.

What you need: Expand the seed list to include Youthfront-specific entities.

New seed entities to add:

Entity · LittleSis Search · Why

----- · ----- · -----

Mike King · Person search · CEO — his professional network is Youthfront's network

Tophier Philgreen · Person search · EVP Strategic — likely has broad KC connections

Tim Smith (board chair) · Person search · Board chair's network is high-value

Youthfront (as org) · Org search · May have filed relationships in LittleSis

Youth for Christ (national) · Org search · Historical parent org — shared network

Each board member by name · Person search · 9 searches

How to execute: Add these seeds to the harvester's LITTLESIS_SEEDS array and re-run the LittleSis phase. The 2-hop expansion will pull their known connections.

```
`javascript
// In harvester.mjs, expand LITTLESIS_SEEDS:
const LITTLESIS_SEEDS = [
  // Existing KC power centers
  { id: '...', name: 'Cerner Corporation' },
  // ... existing seeds ...

  // NEW: Youthfront-specific seeds
  { name: 'Mike King', type: 'person', search: true },
  { name: 'Tim Smith Kansas City', type: 'person', search: true },
  { name: 'Tophier Philgreen', type: 'person', search: true },
  { name: 'Youthfront', type: 'org', search: true },
  // ... remaining board members ...
];
`
```

Expected yield: 50–200 additional relationship edges, some of which will directly overlap with the prospect database.

1C. Church Partner Network

What you have now: Nothing structured. But Youthfront partners with 200+ churches.

What you need: A list of pastors, elders/deacons, and key lay leaders at partner churches.

How to get it:

1. Ask Jim Newberry (VP Ministries) for the church partner list. It exists — Youthfront tracks which churches send kids to camp and which churches they train.
2. For each church, capture: church name, senior pastor, associate pastor(s), youth pastor, 2–3 known lay leaders. Many churches publish this on their website.
3. Structure it as a CSV:

```
`csv
```

church_name,role,first_name,last_name,city,state
Colonial Presbyterian,Senior Pastor,Tim,McConnell,Kansas City,MO
Colonial Presbyterian,Youth Director,Amy,Sullivan,Kansas City,MO
Village Presbyterian,Senior Pastor,Tom,Are,Prairie Village,KS
,

Target: 200 churches × 3–5 contacts = 600–1,000 names.

Why this matters: Church networks are among the highest-trust, highest-conversion channels for faith-based orgs. If a prospect is a member of a partner church, the pastor is potentially the most credible introducer possible — more credible than a board member they've never met.

1D. Event Attendance & Volunteer History

What you have now: Youthfront has 80+ years of operations. Somewhere in their records — CRM, spreadsheets, sign-in sheets, registration databases — are lists of:

- Gala attendees
- Volunteer cabin leaders (camp)
- Something To Eat meal-packing volunteers
- Missional Journey participants
- Retreat attendees (adults)
- Fundraising event RSVPs

What you need: A deduplicated list of all adults who have interacted with Youthfront in a non-donor capacity.

How to get it: This is an internal data project. Work with Lisen and Natasha (COO) to:

1. Export all available lists from whatever CRM or system Youthfront uses (likely a mix of Bloomerang, Excel, and Google Sheets)
2. Deduplicate by name + email or name + address
3. Structure as CSV with name, email, city, state, interaction type, most recent date

Target: 2,000–6,000 unique adult names (distinct from the camp family list, though overlapping).

1E. Donor History (Existing Givers)

What you have now: Youthfront's CRM contains everyone who has ever given. This is the most sensitive dataset and the most valuable for connection mapping — because existing donors are your best *connectors*, not just your best *givers*.

What you need: A list of all donors with: name, city, cumulative giving, most recent gift date, any notes on how they were acquired.

Why donors are connectors: A donor who gives \$500/year and knows 4 people on the prospect list is more valuable as a connector than as a donor. Their \$500 gift is nice. The \$40,000 in expected value from the introductions they could make is transformational.

Phase 2: Build the Connection Graph

Now you have raw data from 5 sources (LinkedIn exports, LittleSis, church partners, event/volunteer history, donor history). The next step is to build a unified graph.

2A. Normalize All Names

Every data source uses different name formats. Before matching, normalize everything.

```
`javascript
// Name normalization (add to harvester or new script)
function normalizeName(name) {
  return name
    .toLowerCase()
    .replace(/[\^a-z\s]/g, "") // Remove punctuation
    .replace(/\b(jr|sr|iii|iv|dr|mr|mrs|ms|rev|pastor)\b/g, "") // Remove titles/suffixes
    .replace(/\s+/g, ' ') // Collapse whitespace
    .trim();
}
`
```

You already have name_normalized in the prospect schema. Apply the same normalization to all org-side names.

2B. Build the Connector Table

Create a new JSON structure — connectors.json — that represents every person in Youthfront's network:

```
`typescript
interface Connector {
  id: string; // connector-{n}
  name: string;
  name_normalized: string;
  role: 'board' | 'staff' | 'donor' | 'volunteer' | 'church_leader' | 'church_member';
  org_relationship: string; // "Board Chair", "Camp volunteer 2024", "Pastor at Colonial Pres"
  influence_score: number; // 0-100: how credible an introduction from this person would be
  city: string;
  state: string;
  employer?: string;
  linkedin_connections?: string[]; // Normalized names from their LinkedIn export
  littlesis_connections?: string[]; // Names from LittleSis graph
  church?: string; // Church affiliation if known
  neighborhoods?: string[]; // Zip codes / neighborhoods
  orgs?: string[]; // Rotary, Chamber, country clubs, etc.
}
`
```

Influence scoring:

Role · Base Score · Rationale

----- · ----- · -----

Board member · 85 · Highest credibility; personal stake

CEO / senior staff · 80 · Institutional authority + personal knowledge

Major donor (\$5K+/yr) · 75 · Financial commitment = credibility

Church senior pastor (partner) · 70 · Spiritual authority in the prospect's community

Long-time volunteer (3+ years) · 65 · Deep personal experience with mission

Mid-level donor (\$500–\$5K) · 60 · Committed but less visible

Church associate/youth pastor · 55 · Known in the community, narrower reach

Event attendee (recent) · 40 · Light touch; may not be willing to make asks

One-time volunteer · 30 · Minimal relationship depth

2C. Build the Connection Edges

Now match every connector against every prospect. This is the 2-million-pair problem — but it's trivial for a script.

Matching layers (each produces a connection edge with a type and confidence):

```
`typescript
interface ConnectionEdge {
  connector_id: string;
  prospect_id: string;
  connection_types: ConnectionType[];
  strongest_type: ConnectionType;
  confidence: 'confirmed' | 'high' | 'medium' | 'low';
  connection_score: number;      // 0-100
}

type ConnectionType =
  | 'linkedin_direct'      // Prospect appears in connector's LinkedIn export
  | 'linkedin_mutual'      // Share 3+ mutual connections (inferred)
  | 'same_employer'        // Work at the same company
  | 'same_church'          // Attend the same partner church
  | 'same_neighborhood'    // Live in the same zip code
  | 'co_board_service'     // Serve on another nonprofit board together
  | 'littlesis_link'       // Connected in LittleSis graph
  | 'same_org_membership'  // Rotary, Chamber, country club, etc.
  | 'family_connection'    // Spouse/child link
  | 'event_co_attendance'  // Both attended same YF event
  | 'political_co_donor'   // Both gave to same political committee
  ;
```

Connection scoring:

Connection Type · Base Score · Confidence · Why

```
----- · ----- · ----- · -----

linkedin_direct · 80 · Confirmed · They actually connected — strongest digital signal

same_church · 75 · High · See each other weekly; shared spiritual community

co_board_service · 70 · Confirmed · Served together; professional respect

littlesis_link · 65 · High · Documented relationship in public graph

same_employer · 60 · High · Work together; daily contact likely

event_co_attendance · 50 · Medium · Were in the same room; may or may not know each other

same_neighborhood · 35 · Medium · Proximity "" relationship, but increases likelihood

political_co_donor · 30 · Low · Shared political alignment; not a personal connection

same_org_membership · 55 · Medium · Rotary/Chamber — likely know each other by name
```

Compound scoring: When multiple connection types exist between the same pair, the score compounds:

```
`javascript
function computeConnectionScore(edges) {
  // Take the strongest connection as base
  const base = Math.max(...edges.map(e => e.base_score));
  // Each additional connection type adds 10-20% of its score
  const bonus = edges
```

```

    .filter(e => e.base_score < base)
    .reduce((sum, e) => sum + e.base_score * 0.15, 0);
return Math.min(100, base + bonus);
}
`

```

Example: Tim Smith has a linkedin_direct connection (80) AND same_org_membership via Rotary (55) with a prospect !' score = $80 + (55 \times 0.15) = 88.25$.

2D. The Matching Script

This is a new script — connection-mapper.mjs — that sits alongside the harvester.

Pseudocode:

```

`javascript
// 1. Load all data
const prospects = loadJSON('prospects-search-index.json'); // 23,782
const connectors = loadJSON('connectors.json'); // 500-2,000
const linkedinExports = loadLinkedInCSVs('./linkedin-exports/'); // Board/staff exports

// 2. Build lookup indices
const prospectsByNormalizedNames = indexBy(prospects, 'name_normalized');
const prospectsByEmployer = groupBy(prospects, 'employer');
const prospectsByZip = groupBy(prospects, 'zip');
const prospectsByChurch = groupBy(prospects, p => p.fields?.church?.name);

// 3. For each connector, find all matching prospects
const edges = [];

for (const connector of connectors) {

  // Layer 1: LinkedIn direct connections
  if (connector.linkedin_connections) {
    for (const linkedinName of connector.linkedin_connections) {
      const normalized = normalizeName(linkedinName);
      const match = fuzzyMatch(normalized, prospectsByNormalizedNames, 0.85);
      if (match) {
        edges.push({
          connector_id: connector.id,
          prospect_id: match.id,
          type: 'linkedin_direct',
          base_score: 80,
          confidence: 'confirmed'
        });
      }
    }
  }

  // Layer 2: Same employer
  if (connector.employer) {
    const coworkers = prospectsByEmployer[normalizeEmployer(connector.employer)] || [];
    for (const prospect of coworkers) {
      edges.push({
        connector_id: connector.id,
        prospect_id: prospect.id,
        type: 'same_employer',
        base_score: 60,
        confidence: 'high'
      });
    }
  }
}
`

```

```

// Layer 3: Same church
if (connector.church) {
  const churchMembers = prospectsByChurch[connector.church] || [];
  for (const prospect of churchMembers) {
    edges.push({
      connector_id: connector.id,
      prospect_id: prospect.id,
      type: 'same_church',
      base_score: 75,
      confidence: 'high'
    });
  }
}

// Layer 4: Same neighborhood (zip)
if (connector.zip) {
  const neighbors = prospectsByZip[connector.zip] || [];
  for (const prospect of neighbors) {
    edges.push({
      connector_id: connector.id,
      prospect_id: prospect.id,
      type: 'same_neighborhood',
      base_score: 35,
      confidence: 'medium'
    });
  }
}

// Layer 5: LittleSis connections
if (connector.littlesis_connections) {
  for (const lsName of connector.littlesis_connections) {
    const match = fuzzyMatch(normalizeName(lsName), prospectsByNormalizedName, 0.85);
    if (match) {
      edges.push({
        connector_id: connector.id,
        prospect_id: match.id,
        type: 'littlesis_link',
        base_score: 65,
        confidence: 'high'
      });
    }
  }
}

// Layer 6: Co-board service (from ProPublica 990 data)
// If connector is an officer on nonprofit X, and prospect is also an officer on nonprofit X
if (connector.board_roles) {
  for (const org of connector.board_roles) {
    const coBoardMembers = prospectsByBoardOrg[org] || [];
    for (const prospect of coBoardMembers) {
      edges.push({
        connector_id: connector.id,
        prospect_id: prospect.id,
        type: 'co_board_service',
        base_score: 70,
        confidence: 'confirmed'
      });
    }
  }
}

// Layer 7: Political co-donation (same committee)
if (connector.political_committees) {

```

```

for (const committee of connector.political_committees) {
  const coDonors = prospectsByCommittee[committee] || [];
  for (const prospect of coDonors) {
    edges.push({
      connector_id: connector.id,
      prospect_id: prospect.id,
      type: 'political_co_donor',
      base_score: 30,
      confidence: 'low'
    });
  }
}
}
}

// 4. Deduplicate and compound-score
const grouped = groupEdgesByPair(edges);
const connections = Object.entries(grouped).map(([pairKey, pairEdges]) => ({
  connector_id: pairEdges[0].connector_id,
  prospect_id: pairEdges[0].prospect_id,
  connection_types: pairEdges.map(e => e.type),
  strongest_type: pairEdges.sort((a, b) => b.base_score - a.base_score)[0].type,
  confidence: bestConfidence(pairEdges),
  connection_score: computeConnectionScore(pairEdges)
}));

// 5. Merge with prospect capacity data for final priority score
const prioritized = connections.map(conn => {
  const prospect = prospectsById[conn.prospect_id];
  const connector = connectorsById[conn.connector_id];
  return {
    ...conn,
    prospect_name: prospect.name,
    prospect_tier: prospect.tier,
    prospect_capacity_score: prospect.score.capacity,
    connector_name: connector.name,
    connector_role: connector.org_relationship,
    connector_influence: connector.influence_score,
    // Final priority: connection strength × prospect capacity × connector influence
    priority_score: (conn.connection_score / 100)
      * (prospect.score.capacity / 100)
      * (connector.influence_score / 100)
      * 100
  };
}).sort((a, b) => b.priority_score - a.priority_score);

// 6. Write output
writeJSON('connections-mapped.json', prioritized);
writeCSV('connections-for-review.csv', prioritized);
`

```

2E. Fuzzy Name Matching

The harvester already uses basic name normalization. For connection mapping, you need fuzzy matching because:

- "Tim Smith" vs. "Timothy Smith" vs. "T. Smith"
- "Sarah Chen-Williams" vs. "Sarah Chen"
- "Bob Johnson" vs. "Robert Johnson"

Use the NameAPI free tier (already in your stack) or implement Jaro-Winkler similarity:

```
`javascript
```

```
// Jaro-Winkler (good for names, handles transpositions and prefixes)
function jaroWinkler(s1, s2) {
  // ... standard implementation ...
  // Returns 0-1 similarity score
  // Threshold: 0.85 for "likely same person"
  // Threshold: 0.92 for "confident same person"
}

function fuzzyMatch(name, index, threshold = 0.85) {
  let bestMatch = null;
  let bestScore = 0;
  for (const [normalized, prospect] of Object.entries(index)) {
    const score = jaroWinkler(name, normalized);
    if (score > threshold && score > bestScore) {
      bestMatch = prospect;
      bestScore = score;
    }
  }
  return bestMatch;
}
```

Disambiguation: When fuzzy matching returns multiple candidates (e.g., two "David Johnson" entries), add secondary matching on city, employer, or zip to disambiguate.

Phase 3: Enrich and Validate Connections

Raw matching will produce false positives. Before handing results to humans, validate the strongest matches.

3A. LinkedIn Validation

For the top 100 matched pairs, use the LinkedIn MCP to confirm the connection:

For each high-priority match:

1. `get_person_profile(prospect_name)` !' check employer, title, location
2. Compare against what the connector's LinkedIn export shows
3. If employer + name match !' confidence = "confirmed"
4. If name matches but employer differs !' check if employer is historical

Budget: 100 lookups/day. At the top-100 priority level, this takes 1 day.

3B. Board Review Session

This is the single highest-ROI hour in the entire project.

Schedule a 60-minute session with the board (or at minimum, the 3–4 most connected members). Present the top 50 matched pairs:

"Tim, our system found that you may know Sarah Chen — she's connected to you on LinkedIn and you're both members at Colonial Presbyterian. Is that right? How well do you know her?"

For each name, capture:

Field · What to Record

Confirmed? · Yes/No — do they actually know this person?

Strength · Close friend / Professional acquaintance / Know of them / Don't actually know them

Context · "She's in my Rotary group" / "Our kids played soccer together" / "I've met her at church but don't know her well"

Willing to introduce? · Yes / Maybe / No

Notes · "Her husband is actually the one more likely to give" / "She just sold her business"

This session will:

- Confirm or reject 30–40 of the 50 matches
- Upgrade 10–20 connections from "medium confidence" to "confirmed + context"
- Surface 5–10 connections the algorithm missed entirely ("Oh, you should also talk to Mark — he's not on your list but he loves what we do")
- Identify 3–5 board members willing to make introductions immediately

3C. Church Leader Validation

For prospects matched via same_church, reach out to the senior pastor or youth pastor at that church:

"Pastor McConnell, we're reaching out to families in our network who might be interested in supporting Youthfront's work. We noticed the Chen family attends Colonial. Would you be comfortable making an introduction, or is there anything we should know?"

This accomplishes three things:

1. Validates the church connection
2. Recruits the pastor as a connector (influence score: 70)
3. Gets pastoral context ("They're going through a hard time right now — not the right moment" or "They've been looking for ways to get more involved — great timing")

Phase 4: Score, Rank, and Prepare for Activation

4A. The Priority Matrix

After validation, every confirmed connection gets a priority score that combines three factors:

,

Priority = Connection Strength × Prospect Capacity × Connector Willingness

,

Factor · Weight · Source

----- · ----- · -----

Connection strength (0–100) · 40% · Matching algorithm + board validation

Prospect capacity (0–100) · 35% · Existing tier/capacity score from prospect database

Connector willingness (0–100) · 25% · Board review session ("willing to introduce" = 100, "maybe" = 50, "no" = 0)

4B. Output Format

The final deliverable is a Connection Activation Report — a CSV or dashboard view with one row per actionable connection:

Rank · Prospect · Capacity Tier · Connector · Connection Type · Strength · Context · Recommended Action

1	· Sarah Chen	· Tier 1 (\$15K+)	· Tim Smith (Board Chair)	· LinkedIn + Church + Rotary	· 95	· "Close friend through Rotary; kids in same school"	· Tim invites Sarah to coffee; shares board experience; Lisen follows up with camp tour invite
2	· David Adler	· Tier 1 (\$10K+)	· Mike King (CEO)	· LinkedIn + Same employer (former)	· 82	· "Worked together at Sprint 2008-2012"	· Mike sends personal email; invites to Something To Eat packing event
3	· Jennifer Walsh	· Tier 2 (\$5K+)	· Pastor McConnell (Colonial Pres)	· Church member	· 78	· "Active member; on missions committee"	· Pastor mentions YF in conversation; Lisen follows with info packet

... · ... · ... · ... · ... · ... · ... · ...

4C. Integration with the Dashboard

Add the connection data to the existing prospect schema:

```
`typescript
// Extend the prospect record
fields: {
  // ... existing fields ...
  connections: {
    count: number;
    strongest: {
      connector_name: string;
      connector_role: string;
      connection_type: string;
      connection_score: number;
      confirmed: boolean;
      context: string;
      willing_to_introduce: boolean;
    };
  };
  all: ConnectionEdge[];
};
}
```

This surfaces on the ProspectProfile page and the Connections page (which already exists in the dashboard).

The Donor Intel Assistant agent can then use this data:

User: "Who should Tim Smith reach out to this month?"

Agent: "Tim has confirmed connections to 8 prospects. The three highest-priority: Sarah Chen (Tier 1, Rotary + church, score 95), David Park (Tier 1, LinkedIn direct, score 81), and Lisa Torres (Tier 2, neighborhood + school, score 74). Sarah is the strongest — Tim knows her well through Rotary and she just sent her daughter to Camp West. I'd recommend Tim invite her to coffee this week while the camp experience is fresh."

Phase 5: Activate the Connections

This is the human phase. The playbook hands off here — but the handoff needs to be structured.

5A. The Connector Brief

For each board member or staff connector, prepare a one-page brief with their assigned prospects:

`markdown

Connection Brief: Tim Smith

Prepared for: March 2026 Board Meeting

Tim, we've identified 8 people in your network who have a connection to Youthfront and the capacity to become significant supporters. We're asking for your help with the top 3:

1. Sarah Chen — Priority: Highest

- How you know her: Rotary + Colonial Presbyterian + LinkedIn
- Her YF connection: Daughter attended Camp West, Summer 2025
- What we know: Partner at Polsinelli PC; \$1.2M home in Prairie Village; gives \$5K+/yr to political campaigns
- The ask: Would you invite Sarah to coffee and share why you serve on the Youthfront board? Lisen will follow up afterward with a camp tour invitation.
- Timing: Ideal within the next 2 weeks (camp experience is still fresh)

2. David Park — Priority: High

...

3. Lisa Torres — Priority: High

...

5B. The Activation Cadence

Week · Action · Who

----- · ----- · -----

Week 1 · Board review session (validate top 50 connections) · Full board or exec committee

Week 2 · Distribute connector briefs to willing board members · Lisen

Week 3–4 · Connectors make introductions (coffee, email, event invite) · Board members / staff

Week 5–6 · Lisen or development staff follow up with introduced prospects · Development team

Week 7–8 · Discovery meetings with responsive prospects · Lisen + relevant connector

Week 9–12 · Cultivation: event invites, camp tours, impact updates · Development team

Month 4–6 · Solicitation for those who've been cultivated · Connector + Lisen (joint ask ideal)

5C. Tracking in the Dashboard

Update prospect pipeline_stage as activation progresses:

,

identified !' connected (introduction made) !' cultivating !' qualified !' solicited !' donor
,

The dashboard already supports these stages. The connection mapping adds the crucial connected` transition — and tracks
who made the connection and *when*.

Phase 6: Ongoing Network Expansion

The initial mapping is not a one-time project. The network grows.

6A. New Connector Onboarding

Every time a new board member, major donor, or key volunteer joins:

1. Request LinkedIn export
2. Run through the matcher
3. Add to connector table
4. Distribute their connection brief within 30 days of joining

6B. Event-Triggered Matching

After every significant event (gala, camp season, Something To Eat packing day):

1. Export the attendee/participant list
2. Run against prospect database
3. Surface new overlaps: "15 camp families from Summer 2026 match prospects in the database"

6C. Quarterly Refresh

Every quarter:

1. Re-run the harvester (FEC data updates, new 990 filings)
2. Re-run the connection matcher with updated connector + prospect data
3. Surface new connections that didn't exist last quarter
4. Update connector briefs

Implementation Timeline

Phase · Duration · Effort · Dependencies

----- · ----- · ----- · -----

- 1A. LinkedIn exports from board/staff · 1–2 weeks · Low (asking + waiting) · Board cooperation
- 1B. LittleSis expansion · 1 day · Low (script modification) · None
- 1C. Church partner list · 1–2 weeks · Medium (data gathering from Jim) · Staff cooperation
- 1D. Event/volunteer history export · 1–2 weeks · Medium (CRM work with Natasha) · CRM access
- 1E. Donor history export · 1 week · Low (CRM export) · CRM access

- 2. Build connection mapper script · 2–3 days · Medium (development) · Phase 1 data
- 3A. LinkedIn validation · 1 day · Low (100 MCP lookups) · Phase 2 output
- 3B. Board review session · 1 hour · High value, low time · Phase 2 output
- 3C. Church leader validation · 1–2 weeks · Medium (outreach) · Phase 2 output
- 4. Scoring + dashboard integration · 2–3 days · Medium (development) · Phases 2–3
- 5. Activation (connector briefs + outreach) · Ongoing · Staff time · Phase 4 output

Total time to first actionable output: 3–4 weeks.
Total development effort: ~5 days of scripting.
Total organizational effort: 2–3 hours of board/staff time + ongoing activation.

What You Need from Youthfront

This playbook can be executed entirely by the consultant (you) with four specific inputs from the organization:

Input · Who Provides · Format · Sensitivity

----- · ----- · ----- · -----

LinkedIn connection exports from 5+ board/staff · Tim, Mike, Lisen, Topher, Jim + others willing · CSV (LinkedIn export) · Medium — contains contact names

Church partner list with key contacts · Jim Newberry (VP Ministries) · Spreadsheet · Low — mostly public info

Event/volunteer attendee history · Natasha Nikkel (COO) · CRM export or spreadsheet · Medium — contains PII

Donor list with names, cities, giving levels · Lisen Tammeus Mann (VP Development) · CRM export · High — most sensitive dataset

The consultant builds the matcher, runs the analysis, produces the connection activation report, and presents it to the board. Youthfront provides the relational data that makes the matching possible.

Key governance note: The donor list and event history contain PII. These datasets should be handled under the AI governance policy. The matching script runs locally — no data is sent to external APIs. The LinkedIn MCP lookups are for validation only and use publicly visible profile data. The output (connection activation report) stays internal to Youthfront's development team.

Expected Results

Based on the modeling from the Modifier Stack article and typical network mapping discovery rates:

Metric · Conservative · Moderate · Optimistic

----- · ----- · ----- · -----

Total org-side connections loaded · 800 · 1,500 · 3,000

Matches found against prospect DB · 80 · 200 · 500

Confirmed after board review · 40 · 120 · 300

Connector willing to introduce · 20 · 60 · 150

Introductions made (Year 1) · 15 · 40 · 100

Converted to first gift · 5 · 15 · 40

Average first gift (introduced) · \$1,000 · \$2,000 · \$3,000

Year 1 new revenue · \$5,000 · \$30,000 · \$120,000

Major gift discoveries (Year 2+) · 2 · 5 · 12

Average major gift · \$7,500 · \$10,000 · \$15,000

Year 2 major gift revenue · \$15,000 · \$50,000 · \$180,000

3-Year total from connection mapping alone · \$35,000 · \$130,000 · \$500,000+

And this is the ethically cleanest use case in the entire stack — scoring 84 on the NAES-100 rubric. No wealth surveillance. No mosaic-effect dossiers. Just: *"Tim, did you know you already know someone who already loves what we do?"*

Part of the Donor Intelligence series:

- **The Donor Conversion Modifier Stack (../donor-conversion-modifier-stack/index.md)**

- **AI Ethics & Governance: Mass Donor Intelligence (../ai-ethics-donor-intelligence-youthfront/index.md)**

Prepared March 2026.

The Donor Conversion Modifier Stack

A complete catalog of every known factor that moves a prospect from cold lead to major donor — ranked by impact on conversion rate and gift size.

The Baseline: What You Start With

A name on a list. No relationship, no context, no connection to the organization. This is where every prospect begins before any modifier is applied.

Metric · Baseline Value · Source

----- · ----- · -----

Conversion rate (cold !' first gift) · 1–3% · AFP Fundraising Effectiveness Project

Average first gift · \$50–\$150 · DonorPerfect / Bloomerang benchmarks

Expected value per prospect · \$0.50–\$4.50 · Conversion × gift size

Retention rate (Year 2) · 19–23% · AFP FEP (first-time donor retention)

Lifetime value · \$65–\$195 · 1.3x first gift over donor lifespan at 20% retention

This is your 1% / \$50 lead. Expected value: roughly \$0.50 per name on the list.

Everything below is what happens to that number when specific conditions are true or specific actions are taken.

How to Read This Guide

Each modifier is presented with:

- What it is — the factor or action
- Conversion shift — how the baseline conversion rate changes (expressed as a multiplier or new range)
- Gift size shift — how the expected gift amount changes
- New expected value — per-prospect expected value after the modifier
- Controllability — whether the organization can create this condition or only discover it
- Evidence basis — where the number comes from

Modifiers compound. A prospect with three active modifiers doesn't just get the best one — the effects stack. The compounding math is addressed at the end.

Tier 1: Relationship & Affinity Modifiers

These are the highest-impact factors. They all answer the same question: *does this person already care?*

1. Prior Organizational Experience

What it is: The prospect (or their family) has directly participated in the organization's programs — attended camp, used

services, volunteered, sent their kids.

Metric · Value

----- · -----

Conversion shift · 1–3% ! 8–20% (5–10x baseline)

Gift size shift · \$50 ! \$150–\$500

New expected value · \$12–\$100 per prospect

Controllability · Discoverable — you can identify this through your own records

Evidence · Bloomerang; DonorPerfect; Penelope Burk *Donor-Centered Fundraising*; common finding that "participants give at 5–10x the rate of non-participants"

Why it matters so much: This is the single most powerful modifier because it combines familiarity, trust, positive experience, and emotional connection. The person doesn't need to be convinced the organization is real or good — they already know. Their child came home from camp changed. They saw the food distribution in action. They sat in a counseling session.

For Youthfront specifically: Every family that has sent a child to camp and had a positive experience is sitting at 8–20% conversion before any other factor is considered. This is why the cross-reference is so valuable — it identifies people who are already at this level AND have financial capacity.

2. Personal Connection to a Current Donor or Board Member

What it is: Someone the prospect knows and trusts already supports the organization. A friend, colleague, neighbor, family member, or business associate who can make an introduction or endorsement.

Metric · Value

----- · -----

Conversion shift · 1–3% ! 15–40% for peer-introduced prospects

Gift size shift · \$50 ! \$250–\$2,500 (peers anchor to their own giving level)

New expected value · \$37–\$1,000 per prospect

Controllability · Partially controllable — you can map networks and ask for introductions; you can't manufacture friendships

Evidence · AFP peer-to-peer research; Indiana University Lilly Family School of Philanthropy; Russell James research on social networks and giving

Why it's so powerful: People give because people they trust ask them to. This is the oldest truth in fundraising. A warm introduction from a respected peer does more than any amount of data, research, or messaging.

The network multiplier: Each board member or committed donor has 150–300 meaningful social connections (Dunbar's number research). If 5% of those connections are plausible prospects, a 9-member board represents access to 67–135 qualified introductions — *if* the organization systematically maps and activates those networks.

3. Shared Identity or Community Membership

What it is: The prospect belongs to the same church, denomination, school, neighborhood, professional association, or social group as the organization's core community.

Metric · Value

----- · -----

Conversion shift · 1–3% !' 5–12%

Gift size shift · \$50 !' \$100–\$400

New expected value · \$5–\$48 per prospect

Controllability · Discoverable — church directories, alumni lists, event attendance

Evidence · Giving USA; Hartford Institute for Religion Research (congregation-based giving); Connected to Give studies

Why it matters: Shared identity creates implicit trust. "They go to our partner church" or "their kids go to the same school" establishes a baseline of credibility that cold outreach cannot replicate.

For faith-based organizations: This modifier is especially strong. Congregation-based networks are among the highest-trust, highest-conversion fundraising channels in the nonprofit sector. Youthfront's partnerships with 200+ churches represent a massive, largely untapped network modifier.

4. Event Attendance (Non-Donor)

What it is: The prospect has attended an organizational event — a gala, open house, tour, volunteer day, or informational gathering — but has not yet given.

Metric · Value

----- · -----

Conversion shift · 1–3% !' 10–25%

Gift size shift · \$50 !' \$100–\$500 (anchored to event context)

New expected value · \$10–\$125 per prospect

Controllability · Highly controllable — you decide what events to hold and who to invite

Evidence · Blackbaud event-to-donor conversion studies; Network for Good

Why it matters: Events are conversion machines because they combine multiple modifiers simultaneously — experience, social proof, emotional engagement, and a natural moment for solicitation. A prospect who attends a camp tour and sees kids at play is not the same prospect who received a direct mail piece.

5. Volunteer Experience

What it is: The prospect has volunteered with the organization — as a cabin leader, meal packer, event helper, or in any hands-on capacity.

Metric · Value

----- · -----

Conversion shift · 1–3% !' 15–30%

Gift size shift · \$50 !' \$200–\$1,000

New expected value · \$30–\$300 per prospect

Controllability · Highly controllable — volunteer recruitment is an intentional strategy

Evidence · Fidelity Charitable giving studies; Corporation for National and Community Service data; Independent Sector research on volunteering and giving

The data is striking: Volunteers are 2x more likely to give than non-volunteers, give 10x more on average, and retain at significantly higher rates. Volunteering creates ownership, insider knowledge, and emotional investment that no amount of external communication can replicate.

Tier 2: Capacity & Wealth Modifiers

These factors don't make someone more likely to give — they make the *gift larger* when they do give. Capacity without affinity is worthless. Affinity without capacity limits the ceiling.

6. Confirmed High Income or Net Worth

What it is: Public or inferred data confirms the prospect has significant financial capacity — high property values, executive compensation, business ownership, investment income.

Metric · Value

----- · -----

Conversion shift · Minimal alone (+0–2% over baseline)

Gift size shift · \$50 !' \$500–\$50,000+ (ceiling lift, not floor lift)

New expected value · Depends entirely on affinity modifiers; capacity alone "H \$5–\$15 per prospect

Controllability · Discoverable — property records, SEC filings, business databases

Evidence · WealthEngine benchmarks; CASE/Council for Advancement and Support of Education; Giving USA wealth-giving correlation data

Critical insight: Wealth does not predict giving. It predicts gift *size* among people who have already decided to give. The research is unambiguous: capacity screening without affinity indicators produces lists of rich people, not lists of donors. The conversion rate on a cold wealthy list is barely better than a cold general list — the gifts are just bigger when they land.

Where it compounds: When stacked with modifiers 1–5, capacity confirmation transforms the equation. A camp parent (8–20% conversion) who also has a \$1.5M home and gives \$5K/year to political campaigns is a fundamentally different prospect than the same camp parent with unknown capacity.

7. Documented Philanthropic History

What it is: The prospect has a verified track record of charitable giving — political donations (FEC), nonprofit board membership, named gifts, donor recognition lists, foundation grants.

Metric · Value

----- · -----

Conversion shift · 1–3% !' 3–8% (cold list with giving history)

Gift size shift · \$50 !' \$250–\$5,000 (anchored to their giving pattern)

New expected value · \$7.50–\$400 per prospect

Controllability · Discoverable — FEC, 990s, ProPublica, donor walls, annual reports

Evidence · DonorSearch validation studies; Target Analytics (Blackbaud); APRA benchmarks

Why it matters: Past behavior is the best predictor of future behavior. Someone who gives \$2,500/year to political candidates and sits on two nonprofit boards is a **proven giver**. They don't need to be convinced that charitable giving is worthwhile — they've already decided that. Your only job is to convince them that **your organization** is worthy of their existing generosity.

The FEC-to-nonprofit pipeline: Political donors are disproportionately likely to be charitable donors. Research from Indiana University's Lilly School suggests 85–90% of significant political donors also make charitable contributions. The FEC dataset is not just a wealth indicator — it's a **giving behavior** indicator.

8. Real Estate Ownership and Property Value

What it is: The prospect owns property, and the assessed or market value is known.

Metric · Value

----- · -----

Conversion shift · Minimal alone (+0–1%)

Gift size shift · Property value is a capacity proxy; gifts correlate at roughly 0.1–0.5% of home value for annual charitable giving

New expected value · A \$750K homeowner gives approximately \$750–\$3,750/year to charity total; your share depends on affinity

Controllability · Discoverable — county assessor records, ATTOM, Zillow

Evidence · IRS Statistics of Income; Giving USA; WealthEngine capacity modeling

As a standalone modifier, weak. Homeownership tells you someone has assets. It doesn't tell you they'll give to you. But as a **confirmation layer** on top of affinity modifiers, it's valuable — it tells you the ceiling is real.

9. Business Ownership or Executive Position

What it is: The prospect owns a business, serves as a C-suite executive, or holds a senior professional role (partner at a firm, physician, etc.).

Metric · Value

----- · -----

Conversion shift · +1–3% over baseline (entrepreneurial identity correlates with giving)

Gift size shift · \$50 !' \$500–\$10,000+ (capacity + identity as a "person who makes things happen")

New expected value · \$5–\$300 per prospect depending on affinity stack

Controllability · Discoverable — LinkedIn, SEC, OpenCorporates, business journals

Evidence · Fidelity Charitable entrepreneur giving studies; Bank of America / Indiana University high-net-worth giving studies

The entrepreneurial donor: Business owners give differently than salaried professionals. They think in terms of investment and return. They want to see impact, efficiency, and leverage. They respond to language like "your gift makes X possible" more than

"we need your help." And they are significantly more likely to make transformational gifts — \$25K+ — because they are accustomed to making consequential financial decisions.

Tier 3: Engagement & Timing Modifiers

These factors relate to **when** and **how** the prospect encounters the organization. Timing and context can double or halve conversion rates.

10. Recency of Positive Experience

What it is: The prospect's most recent interaction with the organization was positive and recent (within 30–90 days).

Metric · Value

----- · -----

Conversion shift · 2–3x whatever the current rate is

Gift size shift · +20–50% over what they'd otherwise give

New expected value · Multiplies the existing expected value by 2–3x

Controllability · Highly controllable — you decide when to follow up

Evidence · Penelope Burk **Donor-Centered Fundraising**; Blackbaud giving patterns; every direct mail study ever conducted

The 48-hour rule: The single most common mistake in nonprofit fundraising is failing to follow up quickly after a positive experience. A parent who picks up their child from camp — child glowing, full of stories — is at peak emotional readiness to give. That window decays rapidly. Within 48 hours, conversion rates are highest. Within 30 days, they're still strong. After 90 days, the prospect has cooled to near-baseline.

11. Life Transition or Milestone

What it is: The prospect is experiencing a significant life event — retirement, sale of a business, inheritance, children graduating, empty nest, relocation.

Metric · Value

----- · -----

Conversion shift · +3–10% during the transition window

Gift size shift · 2–10x (especially for business sales, inheritance, retirement)

New expected value · Highly variable; a business sale can produce one-time gifts of \$10,000–\$1,000,000+

Controllability · Discoverable but not controllable — you can monitor for signals (SEC filings, business news, LinkedIn changes)

Evidence · Russell James, Texas Tech (planned giving research); Giving USA; AFP major gift research

The liquidity moment: Most people don't have \$50,000 sitting in a checking account. But when they sell a business, inherit property, or liquidate a portfolio, there is a window when significant giving is both financially and psychologically possible. Major gift officers who track these moments — and make an appropriately timed, well-framed ask — convert at rates that dwarf standard solicitation.

12. Match or Challenge Gift Availability

What it is: A lead donor or foundation has offered to match gifts during a defined period, doubling (or more) the impact of each dollar given.

Metric · Value

----- · -----

Conversion shift · +22–40% increase in response rate

Gift size shift · +19–51% increase in average gift size

New expected value · Roughly 1.5–2x the existing expected value

Controllability · Controllable — you can secure matching gifts and time campaigns around them

Evidence · Dean Karlan & John List (Yale/U Chicago), field experiments on matching gifts; Innovations for Poverty Action

The most experimentally validated tactic in fundraising. Randomized controlled trials consistently show that matching gifts increase both the number of donors and the average gift size. A 1:1 match is optimal; 2:1 and 3:1 matches do not proportionally increase response further (donors respond to the existence of a match more than the ratio).

13. Specific and Tangible Ask

What it is: The solicitation names a specific dollar amount tied to a specific, concrete outcome — "\$5,000 sends 10 kids to camp" rather than "please consider supporting our mission."

Metric · Value

----- · -----

Conversion shift · +10–30% over generic asks

Gift size shift · +15–40% when the anchored amount is appropriately calibrated

New expected value · ~1.3–1.5x the existing expected value

Controllability · Fully controllable

Evidence · Behavioral economics (anchoring effect); Penelope Burk; countless A/B tests in direct mail and email

Why it works: Specificity does three things — it removes the ambiguity of "how much should I give?", it connects the gift to a tangible impact (making it feel real), and it anchors the amount upward from what the donor might have self-selected.

Calibration matters: The ask amount should be based on the prospect's estimated capacity. Asking a \$50K-capacity donor for \$100 leaves money on the table. Asking a \$500-capacity donor for \$10,000 produces a "not for me" reaction. This is where wealth screening directly improves solicitation effectiveness.

14. Multi-Channel Touchpoint Sequencing

What it is: The prospect receives coordinated outreach across multiple channels — a personal email, followed by a phone call, followed by a handwritten note, followed by an event invitation — rather than a single isolated contact.

Metric · Value

----- · -----

Conversion shift · 3–5 touches: 2–3x baseline; 7+ touches: up to 5x baseline

Gift size shift · +10–25% (engagement builds commitment)

New expected value · 2–4x the single-touch expected value

Controllability · Fully controllable

Evidence · Network for Good multi-channel studies; M+R Benchmarks; Salesforce.org nonprofit engagement research

The rule of seven: Prospects rarely convert on first contact. Industry data consistently shows that 3–7 touchpoints are required before a first gift. The touches must be varied (not seven emails) and escalating (awareness !' engagement !' solicitation !' thank). This is where the agentic dashboard adds genuine value — sequencing and tracking multi-touch cultivation across a large portfolio is exactly the kind of administrative complexity that AI handles well.

15. Personal, Face-to-Face Solicitation

What it is: The ask is made in person — over coffee, at dinner, during a tour, in a one-on-one meeting — rather than through mail, email, or phone.

Metric · Value

----- · -----

Conversion shift · 3–5x whatever the current rate is

Gift size shift · 5–25x versus mail or email solicitation

New expected value · For a qualified, cultivated prospect: \$2,500–\$25,000+

Controllability · Fully controllable — but requires staff time and skill

Evidence · Every major gift study in the literature; Jerold Panas **Asking**; AFP major gift research

The single most effective fundraising action a human being can take. Nothing else comes close. A personal, face-to-face ask from someone the prospect knows and respects, for a specific amount tied to a specific outcome, after a period of cultivation — this is the gold standard. It is also the most expensive per-touch action, which is why all the preceding modifiers exist: to identify and qualify the right people so that face-to-face time is invested wisely.

Tier 4: Communication & Framing Modifiers

These are the factors that shape how the prospect **perceives** the ask. They affect both conversion and gift size but require the relationship and capacity modifiers to be in place first.

16. Donor-Centric Framing ("You" Language)

What it is: Communications center the donor as the protagonist — "you made this possible," "because of you, 10 kids experienced camp" — rather than organization-centric framing ("we need your support," "our programs require funding").

Metric · Value

----- . -----

Conversion shift · +10–20%

Gift size shift · +5–15%

Controllability · Fully controllable

Evidence · Penelope Burk **Donor-Centered Fundraising**; Jeff Brooks **The Fundraiser's Guide to Irresistible Communications**

17. Story-Driven Impact Evidence

What it is: The solicitation or cultivation material includes a specific, true story of a person whose life was changed by the organization — not statistics, not program descriptions, a **story**.

Metric · Value

----- . -----

Conversion shift · +15–30% over fact-based appeals

Gift size shift · +10–25%

Controllability · Fully controllable — requires collecting and telling stories well

Evidence · Paul Slovic "psychic numbing" research; Dan Ariely; Uri Simonsohn; large body of behavioral science on "identifiable victim effect"

The paradox of scale: Telling someone "we serve 6,000 youth" is less effective than telling them about one child named Marcus who found belonging at camp. The brain does not process large numbers emotionally. A single, vivid story activates empathy in a way that statistics cannot.

18. Social Proof and Peer Giving Visibility

What it is: The prospect knows that people like them — peers in their social circle, professional community, or congregation — are already giving.

Metric · Value

----- . -----

Conversion shift · +10–20%

Gift size shift · Peers anchor; gifts tend to cluster within 50–200% of the visible peer gift level

Controllability · Partially controllable — you can share (with permission) who else gives; you can name-drop in appropriate contexts

Evidence · Robert Cialdini **Influence**; large body of social proof research in charitable giving; Dean Karlan & List

19. Gratitude and Stewardship Quality

What it is: How the organization treats donors **after** they give — thank-you speed, personal acknowledgment, impact reporting, ongoing relationship.

Metric · Value

----- . -----

Conversion shift · N/A (post-gift)

Gift size shift (on next gift) · +10–40% for well-stewarded donors

Retention shift · 19% baseline !' 45–65% with excellent stewardship

Lifetime value multiplier · 3–7x first gift (vs. 1.3x with poor stewardship)

Controllability · Fully controllable

Evidence · Penelope Burk *Donor-Centered Fundraising* (definitive on this); Bloomerang retention research

The single most important modifier for long-term revenue. Acquisition gets a lot of attention. Retention is where the money is. Improving first-year donor retention from 20% to 50% can double lifetime revenue without acquiring a single new donor. And the primary driver of retention is not gift acknowledgment — it's meaningful, personal communication about the impact of the gift within 48 hours, followed by ongoing relationship.

20. Tax and Financial Timing

What it is: The solicitation aligns with a moment when giving is financially advantageous — year-end (tax deadline), after a capital gain, during estate planning, in response to required minimum distributions (RMDs) from retirement accounts.

Metric · Value

----- · -----

Conversion shift · +20–50% during Q4 / year-end

Gift size shift · Variable; stock gifts and QCDs (Qualified Charitable Distributions) average 2–5x cash gifts

Controllability · Partially controllable — you can time asks; you can't control the donor's tax situation

Evidence · Giving USA (30% of annual giving occurs in December; 10% in the last 3 days); Fidelity Charitable; Schwab Charitable

Tier 5: Negative Modifiers (Friction and Risk Factors)

These factors *reduce* conversion and gift size. They represent mistakes, friction, or misalignment.

21. Giving Friction (Process Complexity)

Impact · -20–50% conversion for each additional step required

----- · -----

Evidence · Blackbaud online giving UX studies; M+R Benchmarks

If the donation page requires account creation, multiple clicks, or doesn't work on mobile, you lose 20–50% of would-be donors at the transaction point. This is the most preventable loss in all of fundraising.

22. Organizational Scandal or Negative Press

Impact · -30–70% conversion; -50–80% major gift pipeline

----- . -----

Evidence · Case studies (Wounded Warrior Project, etc.); donor trust research

Reputational damage is catastrophic and slow to recover. For faith-based organizations, ethical failures are especially destructive because the implied covenant of trust is higher.

23. Donor Fatigue (Over-Solicitation)

Impact · -15–40% conversion; increased unsubscribe and opt-out rates

----- . -----

Evidence · Bloomerang; DonorPerfect; M+R Benchmarks

More than 2–3 solicitations per month (outside of a specific campaign) triggers fatigue. The agentic dashboard must have cadence limits built in.

24. Mismatched Ask Amount

Impact · Too high: -40–60% conversion. Too low: no effect on conversion but -30–70% on gift size vs. capacity

----- . -----

Evidence · Behavioral economics; every major gift training program

This is the direct argument for capacity research. Without it, organizations systematically under-ask their best prospects and over-ask their smallest donors.

25. Generic, Impersonal Communication

Impact · -30–50% vs. personalized outreach

----- . -----

Evidence · M+R Benchmarks; Blackbaud email performance data; every A/B test comparing personalized vs. generic appeals

"Dear Friend" is the most expensive phrase in fundraising.

The Compound Effect: How Modifiers Stack

Modifiers do not simply add. They multiply. Here is how to think about the math:

Example: A Cold Name on the FEC List

Step · Modifier Applied · Conversion · Expected Gift · Expected Value

----- . ----- . ----- . -----

Baseline · Name on FEC list · 1.5% · \$75 · \$1.13

+ Modifier 7 · Has documented giving history · 5% · \$500 · \$25.00

- + Modifier 1 · Camp parent (prior experience) · 15% · \$500 · \$75.00
- + Modifier 6 · Confirmed high capacity (\$1M+ home) · 15% · \$2,500 · \$375.00
- + Modifier 2 · Board member knows them personally · 30% · \$2,500 · \$750.00
- + Modifier 10 · Child just came home from camp (recency) · 45% · \$3,000 · \$1,350.00
- + Modifier 15 · Board member makes face-to-face ask · 60% · \$5,000 · \$3,000.00
- + Modifier 13 · Specific ask: "\$5,000 sends 10 kids" · 65% · \$5,000 · \$3,250.00
- + Modifier 12 · A match doubles their impact · 70% · \$6,000 · \$4,200.00

From \$1.13 to \$4,200 in expected value. That is a 3,700x increase — same person, same list, different knowledge and different actions.

Example: The Unmodified Wealthy Stranger

Step · Modifier Applied · Conversion · Expected Gift · Expected Value

----- · ----- · ----- · ----- · -----

Baseline · Name on FEC list · 1.5% · \$75 · \$1.13

+ Modifier 6 · Confirmed high capacity · 2% · \$500 · \$10.00

+ Modifier 8 · \$2M property confirmed · 2% · \$750 · \$15.00

+ Modifier 9 · CEO of a local company · 3% · \$1,000 · \$30.00

No affinity modifiers · No relationship, no connection · 3% · \$1,000 · \$30.00

Wealthy but unconnected: \$30. Connected but wealth-unknown: \$75–\$750. The relationship modifiers outperform the wealth modifiers by an order of magnitude.

The Full Modifier Rankings

Ranked by maximum impact on expected value when applied to a baseline cold prospect:

Rank · Modifier · Category · Max EV Multiplier · Controllability

----- · ----- · ----- · ----- · -----

1 · Personal face-to-face solicitation · Engagement · 50–100x · Fully controllable

2 · Personal connection / peer introduction · Relationship · 30–80x · Partially controllable

3 · Prior organizational experience · Relationship · 20–50x · Discoverable

4 · Volunteer experience · Relationship · 15–40x · Highly controllable

5 · Life transition / liquidity event · Timing · 10–100x · Discoverable only

6 · Event attendance (cultivation) · Engagement · 10–30x · Highly controllable

7 · Recency of positive experience · Timing · 5–15x (multiplier on existing) · Highly controllable

8 · Confirmed high net worth / income · Capacity · 5–20x (gift size only) · Discoverable

- 9 · Multi-channel touchpoint sequencing · Engagement · 4–10x · Fully controllable
- 10 · Documented philanthropic history · Capacity · 3–15x · Discoverable
- 11 · Match / challenge gift · Timing · 2–3x · Controllable
- 12 · Specific and tangible ask · Communication · 1.5–2x · Fully controllable
- 13 · Shared community / identity · Relationship · 3–10x · Discoverable
- 14 · Story-driven impact evidence · Communication · 1.3–1.8x · Fully controllable
- 15 · Donor-centric framing · Communication · 1.2–1.5x · Fully controllable
- 16 · Social proof / peer visibility · Communication · 1.2–1.5x · Partially controllable
- 17 · Tax / financial timing · Timing · 1.3–2x · Partially controllable
- 18 · Stewardship quality · Retention · 3–7x (lifetime) · Fully controllable
- 19 · Real estate value confirmation · Capacity · 1.5–3x (gift size only) · Discoverable
- 20 · Business ownership / exec role · Capacity · 1.5–5x · Discoverable

What This Means for the AI Donor Intelligence Stack

The modifier rankings reveal exactly where AI-powered donor intelligence adds value — and where it doesn't.

What AI Does Well (Discovery Modifiers)

AI excels at discovering modifiers 3, 6, 7, 8, 9, 10, 13, and 20 — the factors that are already true but unknown to the organization. Cross-referencing a family list against FEC data (Modifier 7). Pulling property values (Modifier 8). Identifying that a camp parent is also a CEO (Modifier 9). Mapping that a prospect's neighbor is on the board (Modifier 2, partially).

This is the legitimate, high-value function of the donor intelligence platform: it discovers existing modifiers so that human fundraisers know which prospects are most worth their face-to-face time.

What AI Cannot Do (Relationship Modifiers)

AI cannot create modifiers 1, 2, 4, 5, or 15. It cannot generate a genuine relationship, manufacture a personal connection, or conduct a face-to-face solicitation. These are the highest-impact modifiers — and they are entirely human.

What AI Can Support (Engagement Modifiers)

AI can help orchestrate modifiers 6, 9, 12, 13, 14, and 17 — event invitations, touchpoint sequencing, ask calibration, communication drafting, and timing optimization. These are the modifiers where the agentic dashboard adds real operational value: managing the complexity of multi-touch cultivation across a large portfolio.

The Hierarchy of Value

..

HUMAN RELATIONSHIP (Modifiers 1–5, 15)

! Highest impact, not replaceable by AI

! AI's job: identify WHERE to invest human time

DISCOVERY & RESEARCH (Modifiers 6–9, 13, 19, 20)

! High impact on targeting and ask calibration

! AI's job: surface what's already true but hidden

ORCHESTRATION & TIMING (Modifiers 10–14, 17)

! Moderate impact, high complexity

! AI's job: manage sequences, cadence, and logistics

COMMUNICATION QUALITY (Modifiers 15–18)

! Moderate impact, requires brand voice and authenticity

! AI's job: draft, human approves and personalizes

FRICTION REMOVAL (Modifiers 21–25)

! Prevents loss of otherwise-converted donors

! AI's job: automate giving UX, flag over-solicitation

^^

The Hidden Network: Why the #2 Modifier Has Been Structurally Invisible

The modifier ranked second in impact — personal connection / peer introduction, at 30–80x expected value — has a unique property that sets it apart from every other factor on this list:

It almost certainly already exists for a large number of prospects. And no one in the organization knows it.

This is not a failure of effort or attention. It is a failure of combinatorial math.

The Cognitive Impossibility

Consider Youthfront's board of 9 members. Each board member maintains roughly 150–300 meaningful social relationships (the range established by Robin Dunbar's research on human social network capacity). That yields 1,350–2,700 connections across the board alone.

Now add the senior staff. The CEO, COO, VP of Development, VP of Ministries, EVP of Strategic Initiatives — each with their own 150–300 connections, partially overlapping with the board's. Add the 200+ partner churches, each with a pastor and lay leaders who have their own networks. Add long-time major donors, each of whom knows dozens of people in the community.

A conservative estimate of Youthfront's total accessible social network — people who could credibly make an introduction on behalf of the organization — is 3,000–8,000 individuals.

Now cross-reference that against the prospect universe. Even limiting the prospect pool to the 200–600 cross-referenced camp families with confirmed financial capacity, you are looking at:

- 5,000 network connections × 400 prospects = 2,000,000 pairs to check

No development director is doing this. No board meeting agenda includes "let's go through 400 names and see who knows whom." The human brain can hold roughly 7 items in working memory. The combinatorial problem of mapping a 5,000-node network against a 400-person prospect list exceeds human cognitive capacity by approximately five orders of magnitude.

Where These Connections Actually Live

In a pre-AI world, the connections that would activate Modifier #2 are scattered across:

Location · Accessible? · Ever Cross-Referenced?

----- · ----- · -----

Board members' personal mental Rolodexes · Only if asked about a specific name · Almost never systematically

LinkedIn connection lists (9 board + 5 staff) · Technically yes, but no one exports and compares them · No

Church partner directories (200+ congregations) · Theoretically available · Never against a prospect list

Country club and civic organization rosters · Sometimes available · No

School parent directories · Available to members · No

Neighborhood and HOA contacts · Informal · No

Business association memberships (Chamber, Rotary, industry groups) · Partially public · No

Donor's own social networks · Accessible if you ask · Rarely asked systematically

Event guest lists (galas, dinners) · In the org's records · Rarely analyzed for network overlap

Every one of these data sources contains connections that could convert a \$30 cold prospect into a \$3,000 warm prospect. They are not hidden because someone is hoarding them. They are hidden because the question has never been computationally askable.

The Discovery Yield

When organizations first conduct systematic network mapping — even manually, with a board member sitting down with a prospect list — the discovery rate is striking:

Method · Typical Result · Source

----- · ----- · -----

Board member reviews top 50 prospects · Recognizes 8–15 names (16–30%) · Common finding in major gift consulting

LinkedIn connection overlap (board + staff vs. prospect list) · 10–25% match rate · Network mapping tools (RelSci, Windfall, manual export)

Church directory cross-reference · 5–15% overlap in shared-geography orgs · Congregation-based fundraising research

Combined multi-source network map · 20–40% of qualified prospects have at least one discoverable connection · BoardSource; major gift consulting experience

For Youthfront's scenario — 400 cross-referenced camp families with confirmed capacity — a 20–40% connection discovery rate means 80–160 prospects who have a personal link to someone in the organization's network.

Recall the math from Modifier #2:

- Cold prospect expected value: \$1.13
- Prospect with peer introduction: \$37–\$1,000
- 80–160 prospects moved from cold to peer-introduced

The latent value of undiscovered connections in Youthfront's existing network: \$3,000–\$160,000 in expected value — sitting in a spreadsheet no one has built.

What AI Network Mapping Actually Does

This is the use case where AI donor intelligence is at its most ethically clean and financially powerful. Here is why:

1. No new data is collected about the prospect. The AI is not scraping the prospect's information. It is mapping the *organization's own network* — board members, staff, donors, volunteers, church partners — and checking for overlap. The input is "who do *our people* know?" not "what can we find out about *their people*?"

2. The connection already exists. The AI is not manufacturing a relationship. It is surfacing a relationship that is already real. Tim Smith (board chair) actually does know the prospect from Rotary. Lisen Tammeus Mann actually did go to college with the prospect's spouse. These are facts. The AI just makes them visible.

3. The resulting action is maximally human. Discovering that Tim knows the prospect doesn't lead to an automated email. It leads to a conversation: "Tim, I see you know Sarah Chen. Would you be willing to invite her to coffee and share why you're on our board?" That is the most human, most relational, most values-aligned form of fundraising that exists.

4. It inverts the ethical concern. The ethics article scored mass wealth screening as problematic because it treats people as financial targets. Network mapping does the opposite — it treats people as *members of a community* and asks whether existing community ties create a natural path to partnership. It starts from relationship, not from wealth.

The Ethical Inversion

Consider two approaches to the same prospect — a camp parent with a \$1.2M home:

Approach A (Wealth-First):

"Our AI identified that Sarah Chen's home is worth \$1.2M and she gives \$5,000/year to political campaigns. Let's put her in the major gift pipeline."

Approach B (Connection-First):

"Our AI found that Sarah Chen's son went to Camp West last summer — and Tim Smith knows Sarah through Rotary. Tim, would you be open to having coffee with Sarah and sharing what Youthfront means to you?"

Both approaches may lead to the same gift. But Approach B starts from relationship and community. It activates the highest-impact modifier (#2) through the most ethically grounded mechanism (a genuine personal connection). It treats Sarah as a person Tim knows, not a net-worth figure the algorithm surfaced.

On the NAES-100 rubric from the ethics article, network-based connection discovery scores dramatically higher than wealth screening:

Dimension · Wealth Screening (Level D) · Connection Discovery

----- · ----- · -----

Legal & Compliance · 13 · 17

Consent & Transparency · 6 · 15

Proportionality · 9 · 17

Mission Alignment · 8 · 17

Human Oversight · 13 · 18

Total · 49 (Orange) · 84 (Yellow-Green)

Connection discovery scores 84 — nearly in the Green zone — because it uses the organization's own relational data, produces an action that is inherently human and relational, and aligns with Youthfront's core values of community, trust, and "learning from the other."

Why This Changes the Product Story

For the AI donor intelligence platform, this reframes the value proposition entirely:

Old frame: "We help you find rich people and figure out how to ask them for money."

New frame: "We help you discover that your board member's neighbor is a camp parent — and that a personal invitation to coffee is worth \$3,000 in expected value that neither of them knew was there."

The first frame triggers every ethical concern in the book. The second frame is something a faith-based organization can say out loud, to donors, to the board, to ECFA, without flinching.

The highest-value modifier has been hidden not because it's rare, but because the human brain was never built to solve a 2-million-pair matching problem. AI was. And in this case, the AI's most powerful contribution isn't surveillance — it's making visible the community that already exists.

The Bottom Line

A name on a list is worth \$1.13.

That same name — when you discover they're a camp parent with a \$1.2M home who gives \$3,000/year to political campaigns and whose business partner sits on your board — is worth \$750–\$4,200 *before you've done anything except learn what's already true about them.*

That is the value of donor intelligence: not persuasion, not manipulation, but the elimination of ignorance so that human relationship-builders can focus their finite time on the prospects most likely to become partners in the mission.

The AI doesn't convert the donor. The AI tells you which donors are already 70% of the way there.

Companion to: AI Ethics & Governance: Mass Donor Intelligence for Youthfront ([../ai-ethics-donor-intelligence-youthfront/index.md](#))

Prepared March 2026.

Date: 2026-03-20

Companion to: agentive-enrichment-design.md (agentive-enrichment-design.md), agentive-enrichment-value-proposals.md (agentive-enrichment-value-proposals.md)

Purpose: Define the process for discovering organizational and individual relationships around a prospect — who they know, who knows them, what shared affiliations exist, and where Youthfront's existing network overlaps with theirs.

1. What Connection Mapping Solves

Profile enrichment answers "who is this person and can they give?" Connection mapping answers "how do we reach them and why would they listen?"

A development officer with a perfect donor brief still can't do anything if the approach is a cold call. Connection mapping turns cold prospects into warm introductions by finding:

- Shared board service — prospect and a YF board member both sit on the Nelson-Atkins board
- Church overlap — prospect attends a YF partner church where a YF volunteer is an elder
- Social proximity — prospect's spouse went to school with a current major donor
- Professional overlap — prospect's firm has a partner who already gives to YF
- Philanthropic overlap — prospect gives to organizations with missions adjacent to YF's
- Event co-attendance — prospect and a YF insider were both at the same KC gala

The output is a connection path: Prospect !• shared context !• Connector (someone in YF's orbit who can make an introduction).

2. What We Already Have

Before designing the ideal system, here's the existing relationship data:

Source · Records · Relationship Types · Coverage

--- · --- · --- · ---

LittleSis harvest · ~200 entities · Board, employment, political, ownership, family · KC power brokers only (seed: Cerner, Hunt, Kemper, Kauffman, Stowers)

990 cross-reference · 964 officers · Nonprofit officer/trustee at same organizations · KC nonprofits filing 990s

FEC co-giving · 66,801 records · People who gave to the same political committees · All KC metro political donors

Enriched top prospects · 71 profiles · Board memberships, foundation ties, community roles · Hand-enriched top tier

YF board roster · ~12 members · Governance relationship to YF · Current board only

Network cluster analysis · 4 clusters mapped · Leawood/Mission Hills elite, KC foundations, banking dynasty, tech/healthcare · Top ~50 people

Demo connections · 7 records · Mock "connector !" prospect" relationships · Placeholder

Gap: These are all static, pre-harvested. No dynamic discovery. No path-finding between a new prospect and YF's existing network. No relationship strength scoring.

3. The Connection Mapping Pipeline

```

Step 1: Internal Graph Search (instant, free)

Before touching any external API, query your own data. This is the highest-signal, lowest-cost step because YF's internal network is the only source of *warm* connections.

Queries to run against Supabase:

```
`sql
-- 1. Shared nonprofit board service
-- Find YF insiders who serve on boards where the prospect also serves
SELECT yi.name AS connector, yi.role AS connector_role,
       p.name AS prospect, org_name AS shared_org
FROM yf_insiders yi
```

```

JOIN board_affiliations ba1 ON yi.id = ba1.person_id
JOIN board_affiliations ba2 ON ba1.org_ein = ba2.org_ein
JOIN prospects p ON ba2.person_id = p.id
WHERE p.id = :prospect_id;

```

```

-- 2. Shared church
-- Find YF insiders at the same church as the prospect
SELECT yi.name, yi.church, p.name, p.church
FROM yf_insiders yi
JOIN prospects p ON LOWER(yi.church) = LOWER(p.church)
WHERE p.id = :prospect_id;

```

```

-- 3. Same employer
-- Find YF insiders who work at the same company
SELECT yi.name, p.name, p.employer
FROM yf_insiders yi
JOIN prospects p ON LOWER(yi.employer) = LOWER(p.employer)
WHERE p.id = :prospect_id;

```

```

-- 4. Political co-giving
-- Find YF insiders who gave to the same committees
SELECT yi.name, pc1.committee, p.name
FROM yf_insiders yi
JOIN political_contributions pc1 ON yi.id = pc1.person_id
JOIN political_contributions pc2 ON pc1.committee_id = pc2.committee_id
JOIN prospects p ON pc2.person_id = p.id
WHERE p.id = :prospect_id;

```

```

-- 5. Geographic proximity
-- Same ZIP code or neighborhood
SELECT yi.name, yi.zip, p.name, p.zip
FROM yf_insiders yi
JOIN prospects p ON yi.zip = p.zip
WHERE p.id = :prospect_id;
`

```

"YF insiders" table — this is a curated list that needs to be built:

- Current board members (~12)
- Major donors (\$5K+ lifetime) from CRM
- Active volunteers and camp staff
- Church partner contacts (pastors, youth directors)
- Staff with external relationships

This table is the secret weapon. Every connection path terminates at someone willing to make an introduction. Without it, you're mapping relationships to nobody.

Step 2: Co-Affiliation Discovery (2–5 seconds, low cost)

Expand the prospect's organizational footprint, then cross-reference every org against the YF insiders table.

Data sources for organizational affiliations:

Source · What It Returns · How It Feeds Connection Mapping

--- · --- · ---

990 cross-ref (existing) · Nonprofit boards where prospect serves · Cross-ref each org's full officer list against YF insiders

LittleSis (existing) · Known relationships from power network · Direct edges — "this person knows that person"

People Data Labs · Employment history, education · Shared employers (current + past), shared alma maters

OpenCorporates · Company officer/director roles · Shared corporate boards

Candid/GuideStar · Full board lists for nonprofits · If prospect is on Org X's board, who else is on Org X's board?

FEC committee co-donors · People who gave to same PACs/committees · Shared political affinity (weak but real signal)

The cross-reference logic:

`

For each organization the prospect is affiliated with:

1. Pull the full membership/officer list of that organization
2. Fuzzy-match every name against the YF insiders table
3. If match found !' record connection path:
"Prospect !•[serves on board of Org X]!' YF Insider"
4. Score the path based on relationship type and recency

`

Key insight: The value isn't in knowing that a prospect sits on the Nelson-Atkins board. It's in knowing that Sarah Chen (YF board member) also sits on the Nelson-Atkins board — and therefore Sarah Chen can introduce the prospect over lunch at the next board meeting.

Step 3: Agentic Relationship Search (15–40 seconds)

The agent fills gaps that structured data can't. This is where you find the informal, social, and contextual connections that make introductions feel natural rather than transactional.

Agent prompt:

`

You are a relationship researcher for Youthfront, a Kansas City youth nonprofit.

The Prospect

{name, employer, boards, church, neighborhood, family — from enrichment}

Youthfront's Network (people who can make introductions)

{list of YF insiders with their affiliations, employers, churches, boards}

Your Task

Find connections between the prospect and anyone in Youthfront's network.
Search for:

1. Shared organizations: Boards, clubs, professional associations, alumni groups, church committees — any org where both the prospect and a YF insider participate
2. Event co-attendance: Galas, fundraisers, conferences, panels, award ceremonies where both appeared
3. Professional overlap: Same industry, same firm (current or past), client/vendor relationships, co-investments
4. Social proximity: Same neighborhood, same country club, same school (for their children), same social circles
5. Family connections: Spouse networks — does the prospect's spouse connect to anyone in YF's network?
6. Shared philanthropic interests: Do they give to orgs with

overlapping missions? (youth, faith, KC community, education)

7. Second-degree connections: Does the prospect know someone who knows a YF insider? (only if strong signal, e.g., business partners)

Output

For each connection found, return:

- connector: The YF insider who could make the introduction
- prospect: The prospect
- shared_context: What they have in common
- connection_type: board | church | professional | social | geographic | philanthropic | family | event
- strength: strong | moderate | weak
- evidence: URL or description of how you found this
- approach_suggestion: How the connector could naturally bring up Youthfront (1 sentence)

Search queries the agent will run (8–12 per prospect):

- Search 1: "{Prospect}" "{YF Insider 1}" — direct co-mention
- Search 2: "{Prospect}" "{YF Insider 2}" — direct co-mention
(repeat for top 5 most likely YF insiders based on Step 1/2 signals)
- Search 3: "{Prospect}" "{Shared Org}" board OR gala OR event
- Search 4: "{Prospect}" country club OR "{Neighborhood}" social
- Search 5: "{Prospect spouse}" "{City}" board OR church OR volunteer
- Search 6: "{Prospect}" "{Industry}" Kansas City conference OR panel
- Search 7: "{Prospect}" alumni OR reunion "{likely university}"
- Search 8: "{Prospect}" Youthfront OR "youth camp" OR "youth ministry"

Conditional searches:

- If prospect and a YF insider share an employer !' search for internal relationship signals
- If prospect's children attend a known school !' search for PTA/school board overlap
- If prospect gives to a faith org !' search whether any YF church partner is connected to that org
- If LittleSis shows a 2nd-degree connection !' search for the intermediary

Step 4: Path Scoring & Ranking (3–5 seconds)

The synthesis step scores every discovered connection path and ranks them by actionability.

Path scoring rubric:

Factor · Weight · Scoring

--- · --- · ---

Relationship type · 30% · Board co-service: 90, Church co-membership: 85, Professional co-employment: 75, Social/club: 65, Geographic proximity: 40, Political co-giving: 30

Connector willingness · 25% · Board member: 95 (it's their job), Major donor: 80 (invested in YF), Volunteer: 70, Church partner: 65, Acquaintance: 40

Recency · 20% · Current/active: 100, Within 2 years: 75, 2–5 years: 50, 5+ years: 25

Specificity · 15% · Named co-event/meeting: 95, Same org/same time: 80, Same org/different time: 50, Same industry/neighborhood: 30

Naturalness · 10% · Would the intro feel organic? Board dinner mention: 95, "My friend works there": 70, Cold "I know

someone who...": 40

Output: Ranked connection paths

      "intermediary": "David Kemper (Commerce Bank)",
      "prospect_connection": "Alaris Capital has banking relationship with Commerce",
      "intermediary_yf_connection": "Kemper family historically supportive of KC youth orgs (not confirmed YF donor)",
      "strength": "weak",
      "note": "Speculative — requires confirming Kemper-YF relationship first"
    }
  ],
  "cold_approach_fallback": "If no warm path works: direct mail with camp impact story + invitation to fall family event. Emphasize Village Pres partnership and Mission Hills community connection."
}
```

4. The YF Insiders Graph — The Critical Asset

Connection mapping is only as good as the internal network you're mapping *to*. The system needs a curated, maintained table of everyone in Youthfront's orbit with their external affiliations.

Schema:

```
`sql
CREATE TABLE yf_insiders (
  id UUID PRIMARY KEY,
  name TEXT NOT NULL,
  role TEXT NOT NULL, -- 'board', 'staff', 'major_donor', 'volunteer', 'church_partner'
  employer TEXT,
  church TEXT,
  neighborhood TEXT,
  zip TEXT,
  boards TEXT[],      -- external board memberships
  clubs TEXT[],       -- country clubs, social organizations
  alma_mater TEXT[],  -- universities
  children_schools TEXT[], -- where their kids go to school
  introduction_willingness INT, -- 1-5 scale, self-reported
  notes TEXT,
  updated_at TIMESTAMP
);
`
```

Population strategy:

1. Immediate: Manually enter board members + key staff (~15 people) with their known affiliations
2. Phase 2: Run profile enrichment (from the enrichment doc) on each YF insider to fill out their boards, clubs, employer history
3. Phase 3: Ask board members to self-report — "What boards do you serve on? What clubs? What church?" (annual survey)
4. Phase 4: CRM integration — pull major donors and their known affiliations from Salesforce/NGOD
5. Ongoing: Every time a new connection is discovered or confirmed, add it to the graph

Estimated size at maturity: 50–100 insiders with 5–15 affiliations each = 250–1,500 potential connection points.

This is the multiplier. Every new affiliation added to the insiders table creates new potential matches against all 23,782 prospects.

5. Scoring & Cost Analysis

Component 1: Internal Graph Search — Score: 85/100

Approach · What You Get · Cost · Score

--- · --- · --- · ---

Best practice: Full Supabase graph queries (shared boards, churches, employers, ZIP, committees) · All structurally discoverable overlaps between prospect and YF insiders · \$0.00 · 85

Value alt: Simple name cross-ref only (is this prospect already in CRM?) · Known prior relationship only · \$0.00 · 35

Why 85 not higher: Limited by how complete the YF insiders table is. If a board member forgot to list their country club membership, that connection path is invisible. Always constrained by data entry discipline.

No cheaper alternative needed — this step is free. The investment is in building and maintaining the insiders table (human time, not API cost).

Component 2: Co-Affiliation Discovery — Score: 78/100

Approach · What You Get · Cost/Profile · Score

--- · --- · --- · ---

Best practice: 990 cross-ref + LittleSis + PDL + OpenCorporates + Candid (pull full board lists for every org the prospect belongs to, cross-ref against insiders) · Comprehensive organizational overlap map · \$0.20 · 78

Value A: 990 cross-ref + LittleSis only (already harvested) · Overlaps with KC nonprofits and power network only · \$0.00 · 55

Value B: 990 cross-ref only · Overlaps where both are 990-listed officers · \$0.00 · 40

Why 78 not higher: Co-affiliation misses informal connections (same gym, kids on same soccer team, sat next to each other at a dinner). It only finds institutional overlap.

Value A is the sweet spot for most prospects. The 990 and LittleSis data is already harvested and free. Adding PDL and Candid helps for prospects whose affiliations aren't in those datasets — typically people outside the nonprofit governance world.

Component 3: Agentic Relationship Search — Score: 72/100

Approach · What You Get · Cost/Profile · Score

--- · --- · --- · ---

Best practice: Claude Opus, 10–12 targeted searches comparing prospect against top 5 likely YF connectors, including spouse search and event co-attendance · Informal and social connections, event overlap, family network bridges · \$0.80 · 72

Value A: Claude Sonnet, 6–8 searches, top 3 YF connectors only · Same types of connections but narrower search surface · \$0.12 · 60

Value B: Claude Sonnet, 3 searches (direct co-mention queries only) · Only finds connections that are explicitly documented together online · \$0.05 · 42

Value C: No agentic search — rely on Steps 1 and 2 only · Structural connections only, no social/informal discovery · \$0.00 · 0 (this component specifically)

Why 72 not higher: Web search is inherently inconsistent for relationship discovery. Two people can be close friends for 20 years with zero co-mentions online. The agent finds publicly visible connections well but misses private relationships entirely.

This is the component where human knowledge beats AI most dramatically. A 10-minute phone call with a board member who says "oh, I play golf with him every Thursday" is worth more than \$5 of agentic search. The agent's real value is finding connections that *nobody on the YF team knew existed*.

Component 4: Path Scoring & Ranking — Score: 88/100

Approach · What You Get · Cost/Profile · Score

--- · --- · --- · ---

Best practice: Claude Opus synthesis — scores all paths, ranks by actionability, generates approach narrative with specific language for each connector · Prioritized, actionable connection playbook · \$0.40 · 88

Value A: Claude Sonnet synthesis · Same structure, slightly less nuanced approach suggestions · \$0.05 · 79

Value B: Deterministic scoring (no LLM) — rule-based: board co-service = 90, church = 85, etc. + sort by score · Ranked paths without narrative, without naturalness assessment · \$0.00 · 58

Value C: Unsorted list of discovered connections · Raw data, development officer does their own prioritization · \$0.00 · 30

Why 88: The synthesis step is where the LLM adds the most unique value. Deterministic scoring can rank paths, but only the LLM can write "Sarah mentions Youthfront's camp impact at the next Nelson-Atkins board dinner" — the specific, contextual approach language that turns a data point into an action plan.

6. Composite Packages

Maximum Robustness

Component · Score · Cost

--- · --- · ---

- Internal graph search · 85 · \$0.00
- Co-affiliation discovery (full API stack) · 78 · \$0.20
- Agentic relationship search (Opus, 12 queries) · 72 · \$0.80
- Path scoring & narrative (Opus) · 88 · \$0.40
- Composite · 80 · \$1.40

Smart Value

Component · Score · Cost · Quality Drop

--- · --- · --- · ---

- Internal graph search · 85 · \$0.00 · 0
- Co-affiliation discovery (990 + LittleSis only) · 55 · \$0.00 · -23
- Agentic relationship search (Sonnet, 6 queries) · 60 · \$0.12 · -12
- Path scoring & narrative (Sonnet) · 79 · \$0.05 · -9
- Composite · 68 · \$0.17 · -12 avg

Minimum Viable

Component · Score · Cost · Quality Drop

--- · --- · --- · ---

- Internal graph search · 85 · \$0.00 · 0
- Co-affiliation discovery (990 only) · 40 · \$0.00 · -38
- Agentic relationship search (Sonnet, 3 queries) · 42 · \$0.05 · -30
- Path scoring (deterministic, no LLM) · 58 · \$0.00 · -30
- Composite · 55 · \$0.05 · -25 avg

Zero-Cost (structural only)

Component · Score · Cost · Quality Drop

--- · --- · --- · ---

Internal graph search · 85 · \$0.00 · 0

Co-affiliation discovery (990 + LittleSis) · 55 · \$0.00 · -23

Agentic search · skipped · \$0.00 · -72

Path scoring (deterministic) · 58 · \$0.00 · -30

Composite · 52 · \$0.00 · -28 avg

Note: the zero-cost option still scores 52/100 because the internal graph search (85/100) is free and carries the most weight. This reinforces the main thesis: the YF insiders table is the highest-ROI investment in the entire system.

7. Cost at Scale

Package · Per Profile · 71 Tier 1–2 · 2,178 Tier 3 · On-demand Tier 4 (est. 500/yr)

--- · --- · --- · ---

Maximum · \$1.40 · \$99 · \$3,049 · \$700

Smart Value · \$0.17 · \$12 · \$370 · \$85

Minimum · \$0.05 · \$4 · \$109 · \$25

Zero-Cost · \$0.00 · \$0 · \$0 · \$0

Combined with profile enrichment (from the enrichment doc):

Prospect Tier · Enrichment · Connection Mapping · Combined · Per Profile

--- · --- · --- · ---

Tier 1–2 (71) · Max (\$2.70) · Max (\$1.40) · \$291 · \$4.10

Tier 3 (2,178) · Smart (\$0.57) · Smart (\$0.17) · \$1,611 · \$0.74

Tier 4 on-demand (500/yr) · Zero-cost agent (\$0.39) · Min (\$0.05) · \$220 · \$0.44

Year 1 total · · · \$2,122 ·

8. Where Connection Mapping Diverges from Profile Enrichment

Three structural differences worth calling out:

1. The bottleneck is internal, not external

Profile enrichment is bottlenecked by external data availability. Connection mapping is bottlenecked by how well you know your own network. A \$50/year investment in a board survey ("list your boards, clubs, and church") produces more connection paths than \$500 in API calls.

2. Connection quality degrades with distance

A 1st-degree connection (prospect and YF insider share a board seat) is worth 10x a 2nd-degree connection (prospect knows someone who knows a YF insider). The system should present 1st-degree connections prominently and treat 2nd-degree as supplementary. Do not waste agent queries chasing 3rd-degree connections — they are functionally cold outreach with extra steps.

3. Connection mapping compounds over time

Every enrichment is independent — enriching Prospect A doesn't help enrich Prospect B. But connection mapping builds a graph that gets more valuable with every node. When you discover that Prospect A sits on Board X, and later enrich Prospect B who also sits on Board X, you've learned something about *both* prospects. The insiders table and the organizational affiliation index should be treated as persistent, growing assets.

9. The Ideal Output: Connection Brief

What the development officer sees after connection mapping runs:

CONNECTION MAP: James Hebenstreit
 3 paths found · strongest: 87/100
 PATH 1 & & & & (87/100) — Board Co-Service
 Nelson-Atkins
 James H. Museum
 Prospect Board of YF Board Trustees
 Approach: Sarah mentions YF's camp impact at the next Nelson-Atkins board dinner. Natural peer conversation. Ask Sarah to invite James to YF's fall family event.
 PATH 2 & & & & (72/100) — Church Village
 James H. Pres
 Prospect Church YF Dev Assoc
 Approach: Ed invites James to a YF camp Sunday presentation at Village Pres. Low-pressure, familiar setting.
 PATH 3 & & & & (58/100) — Professional KC Finance
 James H. Network
 Prospect YF CEO
 Approach: Mike requests coffee as a fellow KC leader. Frame as seeking business perspective, not as an ask.
 NO PATH? Cold approach fallback:
 Direct mail with camp impact story + event invitation.
 Lead with Village Pres partnership and Mission Hills

%

%

%

%

%

% 9

10. Implementation Priority

Step · What · Why First · Effort

_____ 2 _____ 2 _____ 2 _____

1. Build the YF insiders table · Manually enter 15–20 board members, staff, and top donors with their affiliations · This is the foundation — nothing works without it · 2–3 hours of data entry

2. Internal graph queries · Supabase queries matching prospect affiliations against insiders · Free, instant, highest signal · 1 day engineering

3. 990 + LittleSis co-affiliation cross-ref · Batch job: for every org in insiders' boards, find which prospects are also affiliated · Free, uses existing harvested data · 1 day engineering

4. Agentic search (Sonnet, Smart Value tier) · On-demand agent search when user clicks "Map Connections" · The differentiator — finds what databases miss · 2–3 days engineering

5. Enrich the insiders · Run profile enrichment on each YF insider to fill out their affiliations · Multiplies connection surface area · \$15–30 (15–20 profiles × Scenario A)

6. Board survey · Annual ask: "What boards, clubs, churches are you part of?" · Fills gaps no API can reach · 1 email + follow-up

Context: Youthfront donor prospecting platform — 23,782 harvested prospects, most with thin data (name, city, employer, FEC contributions). This document describes the ideal "Enrich" button workflow: what happens when a user selects a prospect and triggers a deep-dive agentic research process.

Most of our 23,782 prospects have only what the bulk harvest gave them:

— — — — — 2 — — — — —

Social media / bio · 0%

The "Enrich" action needs to take a name + whatever we already have and return a research-grade donor brief in 30–90 seconds.

"

$$\frac{0}{0\frac{1}{4}} \quad \frac{0}{0\frac{1}{4}} \quad \frac{0}{0\frac{1}{4}} \quad \frac{0}{0\frac{1}{4}} \quad \frac{0}{0\frac{1}{4}}$$

Synthesis Agent %

Merges all results %

Scores against donor rubric (capacity/affinity/
engagement/recency) %

Generates narrative brief %

Suggests cultivation strategy %

%¼

Enriched Profile
(saved to Supabase)

Phase 2 cost per profile: \$0.20–\$2.00 depending on which paid APIs are active.

Recommendation: Start with People Data Labs + ATTOM only (\$0.20–0.30/call). Add WealthEngine or DonorSearch later for Tier 1/2 prospects only.

Phase 3: Agentic Web Research (15–60 seconds, primary cost center)

This is the core innovation. An AI agent performs the kind of research a development officer would do manually — but in under a minute.

3a. Agent Architecture Choice

As of March 2026, the three viable agent frameworks are:

Framework · Best For · Web Search Tool · Cost Model

--- · --- · --- · ---

Claude (Anthropic) with tool use · Nuanced reasoning, long synthesis, structured output · Via Brave Search API or Tavily as tools · Per-token (input + output)

OpenAI Agents SDK (GPT-4.1 / o3) · Multi-agent orchestration, built-in web search tool · Native web_search tool (Bing-backed) · Per-token + \$2.50/1K search calls

Google Gemini 2.5 Pro · Massive context, multimodal (can read PDFs/images) · Native Google Search grounding · Per-token + grounding fee

Recommended: Claude Opus 4.6 as primary agent, with Brave Search API as the web search tool.

Rationale:

- Claude produces the most reliable structured output for donor briefs
- Brave Search API is \$0.003/query (vs OpenAI's \$0.0025/search) with better privacy posture for prospect research
- Claude's 200K context window handles the full enrichment prompt + all search results without truncation
- The donor scoring rubric and cultivation frameworks are nuanced documents that benefit from Claude's reasoning depth

Alternative worth testing: OpenAI's Responses API with built-in web_search tool. Advantage: zero infrastructure for search (no Brave API key needed). Disadvantage: less control over search queries, Bing results may be less relevant for KC-specific research.

3b. Agent Prompt Design

The agent receives a structured prompt:

,

You are a prospect research analyst for Youthfront, a Kansas City youth nonprofit.

Known Data

{structured JSON of everything from Phase 1 + Phase 2}

Research Objectives

Find the following information about this person. Search strategically — start with the highest-signal queries first.

1. Wealth indicators: Real estate beyond primary residence, business ownership/exits, investment activity, compensation disclosures

2. Philanthropic history: Donations to other nonprofits, foundation involvement, gala/event attendance, named gifts
3. Faith & community: Church membership, faith-based org involvement, community leadership roles
4. Family: Spouse name, children (ages if findable), family foundation
5. Youthfront connection: Any mention of Youthfront, camps, youth ministry, known YF board/staff relationships
6. Professional profile: Current role, career trajectory, industry, board seats, speaking engagements
7. KC community presence: Business Journal mentions, Ingram's lists, club memberships, civic boards

Output Format

Return a JSON object with structured fields for each category, plus:

- A 2-paragraph narrative summary suitable for a development officer
- A recommended donor score (0-100) with dimension breakdown (capacity/affinity/engagement/recency)
- A suggested cultivation approach (from our framework)
- Confidence level (high/medium/low) for each data point
- Source URLs for verification

3c. Search Strategy (Agent's Internal Process)

The agent will execute approximately 8–15 web searches per prospect, following this decision tree:

- Search 1: "{Full Name}" "{City}" — broad identity confirmation
- Search 2: "{Full Name}" "{Employer}" LinkedIn — professional profile
- Search 3: "{Full Name}" real estate OR property "{City}" — wealth signals
- Search 4: "{Full Name}" foundation OR philanthropi* OR donat* — giving history
- Search 5: "{Full Name}" church OR faith OR ministry "{metro area}" — faith connection
- Search 6: "{Full Name}" Youthfront OR "youth camp" OR "youth ministry" — direct connection
- Search 7: "{Full Name}" "{Employer}" revenue OR funding OR acquisition — business scale
- Search 8: "{Full Name}" "Kansas City Business Journal" OR Ingram's — local prominence
- Search 9: "{Full Name}" board OR trustee OR director nonprofit — governance roles
- Search 10: "{Full Name}" gala OR benefit OR fundraiser "{City}" — event presence

Conditional searches (triggered by Phase 2 results):

- If PDL returns LinkedIn URL !' fetch LinkedIn profile summary
- If ATTOM returns multiple properties !' search for additional holdings
- If 990 shows board role !' search that organization's recent news
- If political giving is \$10K+ !' search for bundling activity, PAC involvement
- If spouse name found !' repeat key searches for spouse

3d. Page Retrieval

For the most promising search results, the agent will fetch and read full pages. Budget: 3–8 page fetches per prospect.

Priority targets:

1. LinkedIn profile (if public or via PDL URL)
2. Company bio page
3. Foundation/nonprofit "about" or "board" pages
4. News articles mentioning the prospect
5. Church staff/leadership pages

Phase 4: Synthesis & Scoring (5–10 seconds)

After all search results are gathered, the synthesis step:

1. Merge all data sources (API results + web research) into a unified profile
2. Score against the 4-dimension rubric:
 - Capacity (0–25): Net worth signals, property, compensation, business scale
 - Affinity (0–30): Faith alignment, youth/family interest, similar org giving
 - Engagement (0–25): Any existing YF touchpoint, volunteer history, event attendance
 - Recency (0–20): How recent are the signals? Active giving vs. historical?
3. Generate narrative brief: 2-paragraph summary a development officer can read in 30 seconds
4. Suggest cultivation approach: Map to one of the 6 donor personas, recommend entry strategy
5. Flag gaps: What couldn't be found? What should a human verify?

Phase 5: Store & Display (< 1 second)

- Write enriched profile to Supabase prospects table (update existing row)
- Store raw research artifacts in prospect_research_logs table (for audit/compliance)
- Return structured result to frontend for display in prospect detail modal

4. Cost Model — Per Profile

Scenario A: Lean Stack (Recommended Starting Point)

Only free/cheap APIs + Claude for agentic search.

Component · Unit Cost · Units/Profile · Cost

--- · --- · --- · ---

Claude Opus 4.6 — input tokens · \$15.00/M tokens · ~30K tokens (prompt + search results) · \$0.45

Claude Opus 4.6 — output tokens · \$75.00/M tokens · ~4K tokens (structured brief) · \$0.30

Brave Search API · \$3.00/1K queries · 12 queries avg · \$0.036

People Data Labs (person enrichment) · \$0.10/call · 1 · \$0.10

ATTOM Data (property lookup) · \$0.10/call · 1 · \$0.10

OpenCorporates · Free (500/mo) · 1 · \$0.00

Page fetches (via agent) · Included in Claude token cost · 5 pages avg · \$0.00

· · ·

Total per profile · · · ~\$1.00

Scenario B: Mid-Tier (Add Wealth Screening)

Add WealthEngine or DonorSearch for prospects scoring 30+.

Component · Unit Cost · Units/Profile · Cost

--- · --- · --- · ---

Everything in Scenario A · · · \$1.00

WealthEngine screening · \$0.75/call · 1 · \$0.75

Candid/GuideStar API · Subscription (\$3K/yr) · amortized · \$0.05

· · ·

Total per profile · · · ~\$1.80

Scenario C: Maximum Robustness (Your Ask)

All available data sources + best model + extended search.

Component · Unit Cost · Units/Profile · Cost

--- · --- · --- · ---

Claude Opus 4.6 — input tokens · \$15.00/M tokens · ~50K tokens (extended search + more pages) · \$0.75

Claude Opus 4.6 — output tokens · \$75.00/M tokens · ~6K tokens (detailed brief + scoring) · \$0.45

Brave Search API · \$3.00/1K queries · 20 queries · \$0.06

People Data Labs (enrichment) · \$0.10/call · 1 · \$0.10

ATTOM Data (property) · \$0.15/call · 2 (person + spouse) · \$0.30

WealthEngine · \$0.75/call · 1 · \$0.75

DonorSearch · \$0.40/call · 1 · \$0.40

Candid/GuideStar · Subscription · 1 · \$0.05

OpenAI web_search (second opinion) · \$0.0025/search + tokens · 5 searches · \$0.10

· · ·

Total per profile · · · ~\$2.96

Cost at Scale

Scenario · Per Profile · 100 Profiles · 500 Profiles · 2,178 Tier 3 · All 23,782

--- · --- · --- · --- · ---

A (Lean) · \$1.00 · \$100 · \$500 · \$2,178 · \$23,782

B (Mid) · \$1.80 · \$180 · \$900 · \$3,920 · \$42,808

C (Max) · \$2.96 · \$296 · \$1,480 · \$6,447 · \$70,395

Practical recommendation: Use Scenario C for Tier 1–2 prospects (71 profiles = ~\$210). Use Scenario A for Tier 3 (2,178 profiles = ~\$2,178). Do not bulk-enrich Tier 4 — only enrich on-demand when a user clicks "Enrich."

5. Model Comparison for the Agent Role

Claude Opus 4.6 (Recommended Primary)

- Strengths: Best structured output, strongest reasoning for scoring, excellent at following complex rubrics, 200K context
- Weaknesses: Most expensive output tokens (\$75/M), slower than Sonnet
- Best for: Tier 1–2 deep dives where quality matters most
- Input: \$15/M tokens | Output: \$75/M tokens

Claude Sonnet 4.6

- Strengths: 5x cheaper output (\$15/M), still excellent at structured tasks, faster
- Weaknesses: Slightly less nuanced reasoning on edge cases
- Best for: Tier 3–4 enrichment where volume matters, or as a "pre-screen" agent
- Input: \$3/M tokens | Output: \$15/M tokens
- Scenario A cost with Sonnet instead of Opus: ~\$0.25/profile

OpenAI GPT-4.1

- Strengths: Native web_search tool (no Brave API needed), good structured output, 1M token context
- Weaknesses: Web search results from Bing (less control), less reliable rubric adherence in testing
- Best for: Alternative/backup agent, or if Brave Search API is unavailable
- Input: \$2/M tokens | Output: \$8/M tokens

OpenAI o3

- Strengths: Best pure reasoning, excellent at multi-step research logic
- Weaknesses: Very expensive (\$10–40/M output depending on reasoning effort), unpredictable latency
- Best for: Not recommended for this use case — overkill for research synthesis

Gemini 2.5 Pro

- Strengths: Native Google Search grounding, 1M token context, can process PDFs/images natively, cheapest at scale
- Weaknesses: Structured output less reliable, grounding adds per-query cost, less tested for donor research
- Best for: Bulk pre-screening, or if you want Google Search results specifically
- Input: \$1.25/M tokens | Output: \$10/M tokens
- Grounding: \$35/1K grounded queries

Recommended Configuration

,

Tier 1–2 (71 prospects, scores 50+):

- ! Claude Opus 4.6 + Brave Search + full API stack (Scenario C)
- ! ~\$3/profile, ~\$210 total

Tier 3 (2,178 prospects, scores 30–49):

- ! Claude Sonnet 4.6 + Brave Search + PDL + ATTOM only (Scenario A with Sonnet)
- ! ~\$0.25/profile, ~\$545 total

Tier 4 (21,533 prospects, scores <30):

- ! On-demand only when user clicks "Enrich"
- ! Claude Sonnet 4.6, minimal search (5 queries)
- ! ~\$0.15/profile

,

6. Latency Budget

Phase · Expected Duration · Parallelizable?

--- · --- · ---

Phase 1: Context assembly · <100ms · N/A

Phase 2: API enrichment · 2–5 sec · Yes (all parallel)

Phase 3: Agentic web search · 15–45 sec · Partially (search batches)

Phase 4: Synthesis & scoring · 5–10 sec · No (sequential)

Phase 5: Store & return · <500ms · N/A

Total · 25–60 seconds ·

UX recommendation: Stream the agent's progress to the frontend via SSE. Show each search query as it executes, then show the brief assembling in real-time. This makes 45 seconds feel fast instead of frozen.

7. Implementation Stack

,

Frontend (React)

```
% % "Enrich" button !' POST /api/enrich/{prospect_id}
% % SSE connection for streaming progress
```

API Route (Vercel Serverless or Supabase Edge Function)

```
% % Orchestrator function
% % Phase 1: Supabase query for existing data
% % Phase 2: Promise.all([pdl(), attom(), opencorp(), ...])
% % Phase 3: Claude API call with tools:
%   tools: [
%     { name: "brave_search", description: "Search the web" },
%     { name: "fetch_page", description: "Retrieve a web page" }
%   ]
% % Phase 4: Final Claude call for synthesis (or same conversation)
% % Phase 5: Supabase upsert + SSE completion event
```

External Services

```
% % Anthropic API (Claude Opus/Sonnet)
% % Brave Search API
% % People Data Labs API
% % ATTOM Data API
% % Optional: WealthEngine, DonorSearch, Candid
```

,

Key Implementation Details

Tool Use Pattern (Claude):

The agent doesn't need a complex multi-agent framework. A single Claude API call with tool use handles the entire research loop:

```
`javascript
const response = await anthropic.messages.create({
```

```

model: "claude-opus-4-6-20250320",
max_tokens: 8192,
system: RESEARCH_ANALYST_PROMPT,
tools: [
  {
    name: "web_search",
    description: "Search the web for information about this prospect",
    input_schema: {
      type: "object",
      properties: {
        query: { type: "string" }
      }
    }
  },
  {
    name: "fetch_page",
    description: "Fetch and read a web page",
    input_schema: {
      type: "object",
      properties: {
        url: { type: "string" }
      }
    }
  }
],
messages: [
  {
    role: "user",
    content: Research this prospect and produce a donor brief:\n${JSON.stringify(prospectContext)}
  }
]
});

```

// Handle tool use loop — Claude will call web_search/fetch_page
// multiple times, you return results, it continues until done
`

Claude will autonomously decide which searches to run, which pages to fetch, and when it has enough information to synthesize. The agentic loop typically completes in 8–15 tool calls.

Rate Limiting & Queuing:

For bulk enrichment (e.g., enriching all Tier 2), use a job queue:

- Supabase enrichment_jobs table with status tracking
- Process 3–5 concurrent enrichments (respect API rate limits)
- Brave Search: 1 query/second on free tier, 15/sec on paid
- Claude API: Tier 3+ gives 4K RPM, well above needs

8. Output: The Enriched Donor Brief

What the user sees after clicking "Enrich":

```

`json
{
  "prospect_id": "prospect-4821",
  "enriched_at": "2026-03-20T14:32:00Z",
  "enrichment_model": "claude-opus-4-6",

9. Risk & Compliance Considerations

Risk · Mitigation

--- · ---

Privacy / data ethics · Only use publicly available information. No scraping of private social media. Log all sources for audit trail.

Accuracy · Every data point carries a confidence level. Agent is instructed to cite sources. Human verification required before any donor outreach based on enriched data.

Bias · Score rubric is explicit and documented. Agent follows the rubric, doesn't invent criteria. Regularly audit score distributions for demographic skew.

Cost runaway · Set per-profile and daily budget caps. Alert if any single enrichment exceeds \$5. Require manual approval for bulk enrichment of >50 profiles.

Rate limits · Queue system with concurrency limits. Exponential backoff on API failures. Graceful degradation (skip unavailable sources, note gaps).

Stale data · Enrichment timestamp displayed prominently. Re-enrichment available on demand. Auto-flag profiles not refreshed in 6+ months.

10. Build vs. Buy Comparison

Option · Cost · Pros · Cons

--- · --- · --- · ---

Build (this design) · \$755 for all Tier 1–3 · Full control, customized to YF rubric, transparent scoring, own your data · Engineering time to build, maintain search tool integrations

WealthEngine batch · ~\$4K–\$8K/yr · Established wealth data, P2G scores · Black-box scoring, no faith/YF-specific signals, no narrative briefs

DonorSearch batch · ~\$4K/yr · Philanthropic history focus · Same limitations — no agentic research, no custom rubric

iWave · ~\$6K–\$12K/yr · Combined wealth + philanthropic · Expensive, generic, no KC-specific or faith signals

Windfall · ~\$3K–\$10K/yr · Good net worth data · API-only, no synthesis, no cultivation recommendations

Verdict: Build. The agentic approach produces a dramatically richer output than any vendor product, at lower cost for our volume, with full customization to Youthfront's specific scoring rubric, faith alignment signals, and KC community context. No vendor product will search for church membership or Youthfront camp connections.

11. Recommended Rollout

Phase · Scope · Est. Cost · Timeline

--- · --- · --- · ---

Phase 0: Prototype · Build enrichment for 5 hand-picked prospects, validate output quality · ~\$15 (5 × \$3) · 1 week

Phase 1: Tier 1–2 · Enrich all 71 high-score prospects (50+) · ~\$210 · 1 day (batch)

Phase 2: On-demand · Ship "Enrich" button in dashboard for any prospect · Varies · 2–3 weeks eng

Phase 3: Tier 3 batch · Enrich 2,178 emerging prospects with Sonnet (lighter) · ~\$545 · 1 day (batch)

Phase 4: Continuous · Auto-enrich new prospects added via harvest refresh · Ongoing (~\$50/mo) · Cron job

articles/agentic-enrichment-value-proposals.md

Agentic Enrichment — Best Practice Scoring & Value Alternatives

Date: 2026-03-20

Companion to: agentic-enrichment-design.md (agentic-enrichment-design.md)

Purpose: Score the "gold standard" approach on each dimension, then propose cheaper alternatives with honest quality grades.

Scoring Methodology

Each component is graded 0–100 on output quality — how well the result serves a development officer making real cultivation decisions. A 100 means "as good as a dedicated human prospect researcher with full database access." The value alternatives show where you can trade small quality drops for large cost savings.

1. Wealth Signal Discovery

Best Practice: PDL + ATTOM + WealthEngine — Score: 88/100

Source · What You Get · Per-Profile Cost

--- · --- · ---

People Data Labs · Inferred salary, job history, education · \$0.10

ATTOM Data · Property ownership, assessed values, sale history · \$0.15

WealthEngine · Modeled net worth, income range, investable assets · \$0.75

Combined · Multi-source triangulated wealth picture · \$1.00

Why not 100: WealthEngine models are probabilistic ($\pm 30\%$ on net worth). No source captures private company equity, crypto, or trust-held assets reliably.

Value Alternative A: PDL + ATTOM only — Score: 72/100 | Cost: \$0.25

Drop WealthEngine. You lose the modeled net worth number, but PDL salary inference + ATTOM property values still give you a usable capacity floor. For most Tier 3–4 prospects, knowing "owns a \$600K house and works as VP at a PE firm" is enough to qualify or disqualify.

What you lose: The neat "\$2M–\$5M net worth" range. You have to infer it yourself from property + salary + giving signals.

Value Alternative B: ATTOM + agentic search only — Score: 61/100 | Cost: \$0.15 + agent tokens

Drop PDL entirely. Use ATTOM for property (highest-signal single wealth indicator in KC metro) and let the agent search for salary/compensation signals via Glassdoor, SEC filings, and news. Slower, less consistent, but often finds the same data.

What you lose: Structured employment history, education, social profile links. Agent will find some of this but not as reliably.

Value Alternative C: Agentic search only (no paid APIs) — Score: 45/100 | Cost: agent tokens only (~\$0.10)

Let the agent search for property records on county assessor websites (Jackson County, Johnson County — both have free public lookup), search for salary info, infer from job title + company size. Works for prominent people; fails for anyone without a public footprint.

What you lose: Consistency. Some profiles come back rich, others nearly empty. You can't batch this reliably.

2. Philanthropic History

Best Practice: DonorSearch + Candid/GuideStar + 990 cross-ref + agentic search — Score: 91/100

Source · What You Get · Per-Profile Cost

--- · --- · ---

DonorSearch · RFM philanthropic score, known major gifts, foundation grants received · \$0.40

Candid/GuideStar · Board affiliations, org budgets, grant details · \$0.05 (subscription)

990 cross-ref (already harvested) · Officer/trustee roles at KC nonprofits · \$0.00

Agentic search · Gala attendance, named gifts, event sponsorships · Agent tokens

Combined · Near-complete charitable giving picture · ~\$0.50

Why not 100: Private gifts to churches and small orgs are invisible. Donor-advised fund grants are anonymous.

Value Alternative A: 990 cross-ref + Candid + agentic search — Score: 74/100 | Cost: ~\$0.10

Drop DonorSearch. You already have 990 officer data for 964 people. Candid fills in org-level context. The agent searches for public gift announcements, gala photos, named spaces, foundation 990s listing grants made.

What you lose: DonorSearch's proprietary RFM score and their aggregated giving database. You still find most major gifts through public records and search — you just miss mid-level gifts to orgs that don't publish donor lists.

Value Alternative B: 990 cross-ref + agentic search only — Score: 62/100 | Cost: agent tokens only

Drop Candid too. You still have the 990 cross-reference data (free, already harvested). The agent does all the work via web search — looking for donor recognition pages, annual report PDFs, foundation databases.

What you lose: Structured data. The agent's findings are less consistent and require more synthesis. But for KC-specific nonprofits where the prospect is likely giving, this often works because local org websites publish donor lists.

Value Alternative C: 990 cross-ref only (no agent, no APIs) — Score: 35/100 | Cost: \$0.00

Just use what the harvest already collected. You know if someone is a nonprofit officer/trustee. You know their political giving. That's it.

What you lose: Everything about their charitable giving that isn't political or officer-level. Fine for initial screening, inadequate for cultivation planning.

3. Faith & Community Signals

Best Practice: Agentic search (dedicated faith queries) — Score: 70/100

Source · What You Get · Per-Profile Cost

--- · --- · ---

Agentic search (3–4 targeted queries) · Church membership, elder/deacon roles, faith org board service, ministry involvement · ~\$0.15 (agent tokens)

YF church partner list cross-ref · Whether their church sends kids to YF programs · \$0.00

Combined · Best available faith alignment picture · ~\$0.15

Why only 70 even at best practice: Church membership is often not publicly indexed. Many congregations don't publish directories online. This is inherently hard to find digitally — the best source is always the YF staff/board's personal knowledge.

Value Alternative A: Single search query + church partner cross-ref — Score: 52/100 | Cost: ~\$0.03

Instead of 3–4 targeted faith queries, run one: "{Name}" church OR ministry "{City}". Cross-reference any church found against the YF partner list. Catches people who are publicly visible in faith communities (elders, deacons, ministry leaders) but misses quiet members.

What you lose: Depth. You won't find faith-based nonprofit board service or mission trip leadership unless it shows up in that single query.

Value Alternative B: Skip automated faith search entirely — Score: 25/100 | Cost: \$0.00

Flag "faith affiliation: unknown" and rely on the development team to fill this in from personal knowledge, CRM notes, or the cultivation process itself. Honest about the limitation.

What you lose: The chance to discover faith connections before the first meeting. But realistically, a 15-minute conversation with a YF board member who knows the prospect's church will always beat web search for this dimension.

4. Family & Personal Context

Best Practice: PDL + agentic search — Score: 65/100

Source · What You Get · Per-Profile Cost

--- · --- · ---

People Data Labs · Household members (sometimes), related profiles · \$0.00 (included in enrichment call)

Agentic search (2–3 queries) · Spouse name, children (school mentions, family foundation filings, social media bios) · ~\$0.10

Combined · Spouse + approximate family picture · ~\$0.10

Why only 65: Family information is the most privacy-sensitive and least consistently available online. School-age children are (rightly) hard to find. Family foundations are the best signal but only exist for high-net-worth households.

Value Alternative A: Agentic search only — Score: 55/100 | Cost: ~\$0.08

Drop PDL's household data (unreliable anyway). One search for "{Name}" family OR wife OR husband "{City}" plus a check for family foundations in 990 data. Finds spouse names for ~60% of prospects, children info for ~20%.

Value Alternative B: Skip entirely, flag for human research — Score: 15/100 | Cost: \$0.00

Mark as "family: unknown — verify in cultivation." The development officer learns this in the first meeting anyway.

5. Youthfront-Specific Connection Discovery

Best Practice: Agentic search + CRM cross-ref + church partner cross-ref — Score: 75/100

Source · What You Get · Per-Profile Cost

--- · --- · ---

CRM cross-ref (Salesforce/NGOD) · Prior gifts, event attendance, volunteer history · \$0.00

Church partner cross-ref · Whether their church is a YF partner · \$0.00

Agentic search (1–2 queries) · Any public mention of Youthfront, camp, youth ministry connection · ~\$0.05

Board/staff "who do you know" · Personal knowledge overlay · \$0.00 (human time)

Combined · Best available connection map · ~\$0.05

Why only 75: Most Youthfront connections are informal (a parent whose kid went to camp 8 years ago). These don't show up in any database.

Value Alternative A: CRM + church partner cross-ref only — Score: 60/100 | Cost: \$0.00

Skip the web search. If someone has a YF connection, your CRM or church partner list is more likely to surface it than Google. The agent search only adds value for people who've been publicly quoted about Youthfront or photographed at events.

Value Alternative B: Just CRM cross-ref — Score: 45/100 | Cost: \$0.00

If you don't have the church partner list digitized yet, just check CRM. Miss the indirect connections but catch all direct ones.

6. Professional Profile & KC Prominence

Best Practice: PDL + agentic search (4–5 queries) — Score: 82/100

Source · What You Get · Per-Profile Cost

--- · --- · ---

People Data Labs · Job title, company, LinkedIn URL, career history · \$0.00 (included)

Agentic search: Business Journal, Ingram's, civic boards, speaking · KC prominence signals, leadership roles, company scale · ~\$0.15

SEC EDGAR cross-ref (already harvested where applicable) · Public company compensation, insider transactions · \$0.00

Combined · Full professional picture + local prominence · ~\$0.15

Value Alternative A: PDL only + 1 search query — Score: 65/100 | Cost: \$0.03

PDL gives you the structured professional profile. One search for "{Name}" "Kansas City Business Journal" OR Ingram's OR board catches the most prominent people. Skip deeper prominence research.

What you lose: Mid-tier prominence signals. You'll find the people on Ingram's 250 but miss the ones who spoke at a Kauffman Foundation event or chair a hospital advisory board.

Value Alternative B: Single LinkedIn search only — Score: 48/100 | Cost: agent tokens for 1 query

If PDL is too expensive at scale, one agentic search for "{Name}" LinkedIn "{Employer}" usually returns enough to confirm title and company. No KC prominence data.

7. Narrative Brief & Cultivation Recommendation

Best Practice: Claude Opus 4.6 synthesis — Score: 92/100

Component · What You Get · Per-Profile Cost

--- · --- · ---

Opus 4.6 synthesis pass · 2-paragraph narrative, scored rubric, persona match, next-steps playbook · ~\$0.75 (30K input + 4K output tokens)

Why 92: Opus produces briefs that read like a senior development officer wrote them. Rubric adherence is excellent. Cultivation recommendations reference the actual YF persona framework.

Value Alternative A: Claude Sonnet 4.6 synthesis — Score: 83/100 | Cost: ~\$0.08

Sonnet produces good briefs — slightly less nuanced cultivation recommendations, occasionally misses a rubric dimension. For Tier 3–4 prospects this is more than adequate.

What you lose: ~10% quality in narrative polish and scoring nuance. The cultivation recommendations are slightly more generic. Worth the 9x cost reduction for anyone not in Tier 1.

Value Alternative B: Claude Haiku 4.5 synthesis — Score: 64/100 | Cost: ~\$0.01

Haiku can produce structured output and basic narratives. The scoring is less reliable (sometimes weights dimensions incorrectly), and the cultivation suggestions are templated rather than truly personalized.

What you lose: The brief reads like a template with fields filled in rather than a thoughtful analysis. Fine for initial screening ("is this person worth a deeper look?"), not for handing to a development officer before a meeting.

Value Alternative C: No synthesis — structured data only — Score: 40/100 | Cost: \$0.00

Skip the narrative entirely. Just display the enriched data fields in the UI and let the development officer draw their own conclusions. Score using a deterministic algorithm (if property > \$500K !' +5 capacity points, etc.).

What you lose: The entire "so what" layer. A development officer looking at raw fields has to do the synthesis work themselves. The scoring is mechanical and misses contextual signals.

8. Composite Package Comparison

Tier: Maximum Robustness (Scenario C from design doc)

Component	Score	Cost
-----------	-------	------

---	----	----
-----	------	------

Wealth signals (PDL + ATTOM + WealthEngine)	88	\$1.00

• • • • Year 1 Total • \$1,627

- WealthEngine: \$4K–\$8K/yr (score ~60 for wealth only, no faith/YF/cultivation)

- DonorSearch: \$4K/yr (score ~55 for philanthropy only)

- iWave: \$6K–\$12K/yr (score ~65 composite, no customization)

- This approach: \$1,627/yr (score 59–83 depending on tier, fully custom)

11. Where Cheap Beats Expensive

Three areas where the value alternative actually outperforms:

1. Faith & community signals — No vendor product searches for this at all. Even our cheapest tier (one agent query, \$0.03) beats WealthEngine's \$0.75 call which returns zero faith data. Score: Free agent query 52 vs. WealthEngine 0.

2. Youthfront-specific connections — Same story. CRM cross-ref + church partner list (free) is infinitely more valuable than any vendor's generic "affinity score." Our \$0.00 approach scores 60; vendors score 0.

3. Cultivation recommendations — Even Sonnet at \$0.08 produces a personalized next-steps playbook mapped to YF's donor personas. No vendor product does this. They give you a number; we give you a plan.

12. Where Expensive Is Worth It

Two areas where the premium is justified for high-value prospects:

1. Wealth signals for Tier 1–2 — WealthEngine's modeled net worth (\$0.75) is worth it for 71 people who might give \$10K+. The difference between "owns a nice house" (score 72) and "estimated net worth \$5M–\$15M with \$2M investable" (score 88)

directly changes your ask amount. At 71 profiles $\times$ \$0.75 = \$53 for data that shapes six-figure asks.

2. Opus synthesis for Tier 1–2 — The extra \$0.67/profile (Opus vs Sonnet) produces noticeably better cultivation narratives. When a board member is about to have coffee with a \$50K potential donor, the brief needs to read like it was written by a seasoned development officer, not a template engine. At 71 profiles $\times$ \$0.67 = \$48 for briefs that directly inform high-stakes conversations.

articles/what-the-prospect-database-actually-is.md

What the ~20,000-Record Prospect Database Is — Today, and What It Becomes Next

A stakeholder-facing readout of the Kansas City–metro prospect file: what’s in the shipped data (verified from public/data/), why it was built this way, and how it’s meant to grow once an organization puts budget and a few focused hours behind the next layers. Counts and distributions: March 20, 2026.

Context: demo first, engagement second

This stack was built before a professional engagement with Youthfront — as a working demo of what a modern prospect pipeline can look like: ingest public signals, score and tier, search fast, enrich selectively, and wire AI on top.

The important distinction for leadership: the limitation you see in the export is not “the architecture can’t support more.” It’s what one builder chose to prove on personal time and dollar. The product already anticipates richer layers — see reserved fields and the source catalog in 01-data-shape.md (../_build/type/01-data-shape.md) and _OVERVIEW.md (../_build/api-sources/kc-donor-prospecting/_OVERVIEW.md). Adding high-value commercial and county data is a funding and prioritization decision, not a technical cliff.

The one-sentence story (for people who only read one line)

~20,000 deduplicated KC-metro individuals, scored and searchable today, anchored in federal itemized political money (name, address, employer, occupation) — i.e. a real prospect spine development shops pay vendors to approximate — designed to absorb local business leadership lists, home values, and other paid or scraped sources without rebuilding the app.

Scale: how big, and where the numbers come from

Metric · Value · Source

----- · -----; · -----

Prospects in the app / search index · 19,649 · pipeline-summary.json !' total_prospects; prospects-search-index.json row count

Raw rows ingested in a harvest run · 67,058 · stats.json !' raw_records

“Unique prospects” before the merge that feeds the app · 23,782 · stats.json !' unique_prospects

“~20,000 people” is the right headline for the live file. The 23,782 figure is an intermediate harvest count; the product’s working set is the deduplicated 19,649.

Geography: KC-metro lens

Aggregating all rows in prospects-tier1.json through prospects-tier4-part2.json:

State · Rows · Share (approx.)

----- · -----; · -----;

Kansas · 11,250 · 57%

Missouri · 8,293 · 42%

Unknown / missing · 106 · <1%

Top cities by row count: Overland Park, Olathe, Lenexa, Shawnee (KS); Kansas City, Independence, Lee's Summit, Liberty, Blue Springs, Gladstone (MO); Leawood, Prairie Village, Fairway, Mission, Mission Hills (KS); and other ring suburbs.

Story: The file maps where itemized federal political money is reported in the bistate metro — the same geography where KC Business Journal lists, chamber boards, and assessor parcels also concentrate. That's intentional: the spine matches the market you'd enrich next.

Who they are today: signals in the file

Primary signal (almost everyone): `political_donor` on 19,543 rows — `openfec` drives the backbone (itemized \$200+ contributions, employer/occupation). Documented in `openfec.md` (`../_build/api-sources/kc-donor-prospecting/apis/openfec.md`).

Secondary signal: 106 rows list `littlesis`. 97 / 9 rows use `person_connection` / `person_connection_2hop`.

Honest boundary: anyone wealthy but invisible to federal itemized giving won't appear until you merge other lists (e.g. Book of Lists, 990 officers, foundation networks). That's expected for a Phase-1 spine — and it's why the next data buys matter.

Wealth and capacity: what's true now vs what budget unlocks

What's in the file today (no fluff)

- `FEC total_giving` per row — public political totals aggregated in-pipeline. Useful as engagement + capacity proxy, not a net-worth statement.
- Enriched rows may carry narrative `net_worth` text from research — not a vendor P2G score across everyone.

Distribution across rows (March 2026 merge; one row per `name_normalized`):

Statistic · Approximate value

----- · -----:

Median `total_giving` · \$1,000

90th percentile · ~\$9,800

99th percentile · ~\$78,000

Maximum · ~\$1.95M

Rows over \$100,000 · 146

Rows over \$10,000 · 1,805

What we still don't claim: a scientific "average net worth" across 19k people — that would require screening data or modeled assets, not FEC alone.

Property and home value — empty column, not a dead product

Today, `fields.property` is null everywhere in the shipped JSON, and `joco_property` merged 0 in the harvest stats — by choice and time, not because the schema can't hold values.

The roadmap story you can tell with a straight face:

- County / assessor-style home values are a known, bounded effort — often a few hours of focused integration to attach a large share of values where addresses and parcel logic line up (exact match rates depend on source quality and geocoding; the point is *work*, not *research mystery*).
- Paid property APIs (e.g. ATTOM-class) are already catalogued in _OVERVIEW.md (../_build/api-sources/kc-donor-prospecting/_OVERVIEW.md) as the next-tier stack when an org wants national-grade coverage.

KC Business Journal and similar — additive, not a rewrite

The project docs already treat KC Business Journal Book of Lists, Ingram's, chamber boards, and similar as KC-specific list sources (_OVERVIEW.md (../_build/api-sources/kc-donor-prospecting/_OVERVIEW.md)). In practice, licensing or buying a formatted export (on the order of ~\$500 for a Business Journal-class dataset, depending on terms) is how shops normally get those names machine-readable. That layers onto the same prospect store — match, dedupe, score — rather than replacing what's built.

Priority tiers: triage shape

From pipeline-summary.json:

Tier · Label · Count · Composite score band

----- · ----- · -----; · -----

1 · Steward · 48 · 60–100

2 · Champion · 18 · 40–59

3 · Builder · 1,196 · 25–39

4 · Prospect · 18,387 · 0–24

Story: A pyramid — a tight top for deep work, a wide base that still meets inclusion rules. New sources mostly re-rank and enrich; they don't change the usefulness of having everyone in one searchable system.

Enrichment: sparse by design at this stage

Status · Count

----- · -----;

Enriched (AI / web-assisted research layers) · 68

Not enriched · 19,581

Personas and narrative intel concentrate in that enriched set today. With org budget, enrichment becomes batch jobs + APIs + researcher time — the UI and storage path already exist.

Pipeline stages are largely identified in this snapshot — room for CRM reality as the org adopts the tool.

Stories you can tell stakeholders (and search engines)

1. "Nearly 20,000 KC-metro prospects in one searchable system, built from public federal itemized giving — the same kind of signal major shops use as a first pass."
2. "This was a pre-engagement demo; the next jumps are commercial and local lists (e.g. Business Journal–class data) and property — budgeted work, not a science project."
3. "Geography matches the metro you'd fundraise in — Johnson County and Jackson County suburbs lead the counts."
4. "Political giving shows a long tail: most rows are modest totals, with a clear set of six-figure federal givers at the top."
5. "We're not pretending net worth is modeled for everyone; we're showing the spine and the scoring layer, with a documented path to screening-grade and local-lore data."

What we are not claiming (still important)

- Uniform net-worth or income modeling across all rows without adding screening or asset data.
- Completeness for all wealthy households until non-FEC lists are merged.
- Freshness of FEC aggregates without periodic re-harvest (timestamps live in pipeline-summary.json / stats.json).

Method note for auditors

Scoring intent is documented in project materials (e.g. `_MASTER_PROSPECT_LIST.md` (`../../_build/api-sources/kc-donor-prospecting/results/_MASTER_PROSPECT_LIST.md`)). Counts and percentiles in this article were verified from JSON under `public/data/`; regenerate aggregates after a new harvest.

Suggested short meta description (for SEO / sharing)

~19,650 deduplicated Kansas City metro prospects from federal itemized political data, scored and searchable — built as a demo spine ready for Business Journal–class lists, home values, and paid enrichment as the organization funds the next layers.

Descriptive documentation; does not change product behavior.

Searchable Content Rubric — Per-Field Value Scoring, Search Process & Cost

Date: 2026-03-20

Context: Each row below represents a discrete button in the UI. The user views a prospect card, sees gaps, and clicks a button labeled "Find Church" or "Find Property" or "Find Bio." That button triggers a focused search for *just that one piece of content.* This document scores how valuable each field is to Youthfront's cultivation mission, prescribes exactly how to search for it, and projects the cost.

How to Read This Document

Each content type gets:

1. Value score (0–100): How much this field moves the needle for a development officer deciding whether and how to approach this prospect. Scored from Youthfront's specific perspective — a faith-based KC youth nonprofit.
2. Gettability score (0–100): How reliably a single focused search returns this data. High = almost always findable. Low = hit-or-miss.
3. Search process: Exactly what happens when the button is clicked. Every query, every API call, in order.
4. Cost: Best-case (maximum quality) and best-value (cheapest acceptable result).

The Rubric — Ranked by Value

Rank	Content Field	Value	Gettability	Value × Gettability	Best Case Cost	Best Value Cost
---	---	---	---	---	---	---
1	Youthfront Connection (#1-youthfront-connection)	98	30	29.4	\$0.05	\$0.00
2	Church / Faith Affiliation (#2-church--faith-affiliation)	95	40	38.0	\$0.12	\$0.03
3	Philanthropic Giving History (#3-philanthropic-giving-history)	90	55	49.5	\$0.50	\$0.05
4	Nonprofit Board & Civic Roles (#4-nonprofit-board--civic-roles)	88	70	61.6	\$0.15	\$0.00
5	Family & Household (#5-family--household)	82	45	36.9	\$0.15	\$0.05
6	Connection Paths to YF Network (#6-connection-paths-to-yf-network)	80	50	40.0	\$0.40	\$0.05
7	Property & Real Estate (#7-property--real-estate)	75	80	60.0	\$0.20	\$0.03
8	Net Worth / Wealth Estimate (#8-net-worth--wealth-estimate)	75	35	26.3	\$0.85	\$0.08
9	Professional Bio & Career (#9-professional-bio--career)	70	85	59.5	\$0.12	\$0.03
10	Employer & Compensation (#10-employer--compensation)	68	75	51.0	\$0.12	\$0.00
11	KC Prominence & Media (#11-kc-prominence--media)	60	60	36.0	\$0.08	\$0.03
12	Education & Alumni (#12-education--alumni)	45	70	31.5	\$0.10	\$0.03
13	Social Media Profiles (#13-social-media-profiles)	40	75	30.0	\$0.10	\$0.03
14	Club & Social Memberships (#14-club--social-memberships)	38	25	9.5	\$0.08	\$0.03
15	Political Giving Detail (#15-political-giving-detail)	30	95	28.5	\$0.00	\$0.00

Detailed Field Specifications

1. Youthfront Connection

Value: 98 | Gettability: 30

Why 98: Nothing matters more than an existing relationship with Youthfront. A prospect who sent their kid to camp 6 years ago is 10x more cultivatable than a wealthier stranger. This turns a cold prospect into a warm renewal. It changes the entire conversation from "let me tell you about us" to "remember when your daughter loved camp?"

Why only 30 gettability: Most YF connections are informal and unrecorded. A parent who attended camp in 2018 probably doesn't show up on any public website. The CRM is the primary source, and if it's not there, web search rarely finds it. The exception is people who've been publicly quoted about YF, served on the board, or appeared in YF marketing materials.

What you're looking for:

- Prior donor (any amount, any year)
- Camp attendee (as child, parent, or volunteer)
- Church partner relationship (their church sends kids to YF programs)
- Event attendee (galas, fundraisers, camp tours)
- Volunteer or staff (current or former)
- Board service (current or former)
- Public mention (quoted in YF newsletter, annual report, media)

Search Process

--

Step 1: CRM query (instant, \$0.00)

! ' SELECT * FROM crm_contacts WHERE name ILIKE '%{prospect}%'
! ' Check: gifts, events, volunteer records, email engagement

Step 2: Church partner cross-ref (instant, \$0.00)

! ' Does the prospect's known church (if any) appear in YF's
church partner list?
! ' If yes: indirect connection confirmed

Step 3: Agentic search — 2 queries (\$0.03–0.05)

! ' Query 1: "{Full Name}" Youthfront
! ' Query 2: "{Full Name}" "youth camp" OR "youth ministry"
"{Kansas City}" OR "{their church name}"
! ' Agent reads top 3 results, extracts any YF mention

Step 4: Internal knowledge prompt (\$0.00)

! ' Surface a prompt to the user: "Does anyone on staff or
board know {Name}? Check with: [list likely connectors
based on shared geography/church/employer]"
,

Cost

Approach · Process · Cost · Gettability

--- · --- · --- · ---

Best case · CRM + church cross-ref + 2 agent queries · \$0.05 · 30

Best value · CRM + church cross-ref only (no agent) · \$0.00 · 22

Recommendation: Always run this search first for any prospect. It's nearly free and the result completely reshapes the cultivation approach.

2. Church / Faith Affiliation

Value: 95 | Gettability: 40

Why 95: Youthfront is a faith-based organization. A prospect's church membership is the single strongest affinity signal available. It determines: (a) whether there's mission alignment at all, (b) whether their church is already a YF partner, (c) the natural entry point for cultivation (camp Sunday, church presentation, pastor introduction). For many Tier 2–3 prospects, church affiliation is the deciding factor between "pursue" and "deprioritize."

Why only 40 gettability: Churches rarely publish member directories online. You can find pastors, elders, deacons, committee chairs, and people quoted in church newsletters — but quiet Sunday attenders are invisible to web search. Megachurches with online sermon videos occasionally show attendees in the background, but this isn't searchable. The most reliable signals are leadership roles, public testimonies, and faith-based nonprofit involvement.

What you're looking for:

- Church name and denomination
- Leadership role (elder, deacon, committee chair, Sunday school teacher)
- Faith-based nonprofit involvement (mission trips, faith org boards)
- Public faith expression (testimony, speaking at faith events, Christian conference attendance)
- Whether their church is a YF partner church

Search Process

,

Step 1: Check existing data (instant, \$0.00)

- ! Does the prospect record already have a church field from prior enrichment or CRM?

Step 2: Agentic search — 3 queries (\$0.08–0.12)

- ! Query 1: "{Full Name}" church OR elder OR deacon "{City}" OR "{ZIP neighborhood}"
- ! Query 2: "{Full Name}" ministry OR faith OR Christian "{metro area}"
- ! Query 3: "{Full Name}" "{likely denomination}" OR "bible study" OR "mission trip" (denomination inferred from ZIP — e.g., Mission Hills skews Presbyterian/Methodist; Lee's Summit skews Baptist/nondenominational)

- ! Agent reads top 3 results per query
- ! If church name found: fetch church website, check leadership page for confirmation

Step 3: Church partner cross-ref (instant, \$0.00)

- ! If church identified, check against YF partner list
- ! If match: flag as high-priority affinity signal

Step 4: Faith-org 990 cross-ref (instant, \$0.00)

- ! Check if prospect appears as officer/trustee of any faith-based nonprofit in the 990 harvest data
- ! EIN classification: religion-related (NTEE code X)

,

Cost

Approach · Process · Cost · Gettability

Best case · 3 agent queries + page fetch + 990 cross-ref · \$0.12 · 40

Best value · 1 agent query + 990 cross-ref (no page fetch) · \$0.03 · 28

Recommendation: Run this early for any prospect scoring 30+. Even a negative result ("no church found") is informative — it lowers the affinity score and may deprioritize the prospect.

3. Philanthropic Giving History

Value: 90 | Gettability: 55

Why 90: Past giving is the best predictor of future giving. A prospect who already gives \$10K/year to similar nonprofits (youth, faith, KC community) is a near-certain cultivation target. This field directly informs the ask amount — you don't ask someone for \$25K if their largest known gift anywhere is \$500.

Why 55 gettability: Major gifts (\$10K+) are often publicly acknowledged — donor walls, annual reports, named spaces. Mid-level gifts (\$500–\$5K) are rarely public. Donor-advised fund grants are anonymous. Foundation giving is documented in 990-PFs. The FEC data we already have covers political giving but not charitable.

What you're looking for:

- Named gifts to other nonprofits (donor recognition lists, named spaces)
- Foundation grants (as donor or recipient)
- Annual report donor listings (by giving level)
- Gala sponsorships and event chair roles
- Planned giving / legacy society memberships
- Capital campaign commitments

Search Process

,

Step 1: Check existing data (instant, \$0.00)

- ! Political giving total (already in prospect record from FEC)
- ! 990 officer roles (already cross-referenced)

Step 2: DonorSearch API (optional, \$0.40)

- ! Returns: philanthropic RFM score, known major gifts, foundation grant history, estimated annual giving
- ! Highest-quality single source for this field

Step 3: Candid/GuideStar search (if subscribed, \$0.05)

- ! Search prospect name in grants database
- ! Returns foundation grants where prospect is trustee/officer
- ! Cross-ref with 990-PF filings for private foundation giving

Step 4: Agentic search — 3 queries (\$0.08–0.12)

- ! Query 1: "{Full Name}" donor OR gift OR donation OR philanthrop* "{City}"
- ! Query 2: "{Full Name}" foundation OR "annual report" OR "donor wall" OR "named"
- ! Query 3: "{Full Name}" gala OR benefit OR fundrais* OR sponsor "{Kansas City}"

- ! Agent reads donor recognition pages, annual report PDFs, gala recap articles
- ! Extracts: organization name, gift range (if listed by tier), year, context

Step 5: Agentic page fetch — 2 pages (\$0.03)

! If search results include annual reports or donor lists from recognizable KC nonprofits, fetch and parse them
! Priority targets: Nelson-Atkins, Kauffman Center, Children's Mercy, Pembroke Hill, Rockhurst, KC Symphony

Cost

Approach · Process · Cost · Gettability

--- · --- · --- · ---

Best case · DonorSearch + Candid + 3 agent queries + page fetches · \$0.50 · 55

Best value · 990 cross-ref + 2 agent queries (no DonorSearch) · \$0.05 · 38

Recommendation: Use DonorSearch for Tier 1–2 only ($\$0.40 \times 71 = \28). For Tier 3+, the agent search catches the publicly visible gifts, which are the ones that matter most (they signal the prospect *wants* to be recognized for giving).

4. Nonprofit Board & Civic Roles

Value: 88 | Gettability: 70

Why 88: Board service is a triple signal: (a) capacity — board members are typically donors at the organization they govern, (b) affinity — the types of boards they serve on reveal what they care about, (c) connection paths — shared board service is the #1 source of warm introductions. A prospect who serves on three KC nonprofit boards is almost certainly cultivatable. A prospect on a youth or faith board is a near-perfect YF affinity match.

Why 70 gettability: This is one of the most findable fields. 990 filings list officers and trustees. Organization websites publish board lists. LittleSis tracks governance relationships. LinkedIn profiles list board roles. The main gap is small organizations that don't file 990s or maintain websites.

What you're looking for:

- Current nonprofit board memberships (with role: chair, treasurer, trustee, etc.)
- Civic board roles (chamber of commerce, hospital advisory, school board)
- Foundation board service
- Government-appointed commissions or advisory roles
- Professional association leadership

Search Process

,

Step 1: Check existing data (instant, \$0.00)

! 990 cross-ref: already harvested officer roles for KC nonprofits
! LittleSis: already harvested governance connections for power network entities
! Enriched prospects: top 71 already have board_memberships field populated

Step 2: Agentic search — 2 queries (\$0.05–0.08)

! Query 1: "{Full Name}" board OR trustee OR director nonprofit OR foundation "{City}"
! Query 2: "{Full Name}" advisory OR commission OR committee OR chair civic

! Agent reads organization board pages, press releases, annual reports

! For each board found: extract org name, role, whether current

Step 3: Cross-reference discovered boards (instant, \$0.00)

! For each board identified, check if any YF insider serves on the same board
! If match: flag as connection path (feed to connection mapping system)
! Check board org's mission: youth? faith? KC community? education? ! affinity signal

Step 4: OpenCorporates lookup (optional, \$0.00–0.05)

! Search for corporate director/officer roles
! Returns: for-profit company governance positions
! Less relevant to affinity scoring but signals capacity

Cost

Approach · Process · Cost · Gettability

--- · --- · --- · ---

Best case · 990 + LittleSis + 2 agent queries + OpenCorporates + cross-ref · \$0.15 · 70

Best value · 990 + LittleSis data only (already harvested, no new search) · \$0.00 · 50

Recommendation: The best-value option is genuinely good here because you already have 990 and LittleSis data. Only trigger the agent search for prospects where the existing data shows zero board roles — they may have roles at orgs outside your 990 harvest scope.

5. Family & Household

Value: 82 | Gettability: 45

Why 82: Family context transforms cultivation strategy. A spouse who's a YF camp alumna is worth more than the prospect's own credentials. Children in the 6–17 age range make camp an immediate, tangible offer. A family foundation means giving decisions are made jointly. Even knowing the spouse's name lets you address the couple properly in correspondence — a basic courtesy that signals you've done your homework.

Why 45 gettability: Spouse names are moderately findable — property records list co-owners, political contributions sometimes list household members, social media bios mention spouses. Children are harder and more sensitive. Family foundations are easy (990-PF filings). The ethical line: search for publicly available family information only; do not attempt to find information about minor children beyond what parents have shared publicly.

What you're looking for:

- Spouse/partner name
- Whether spouse has independent wealth, career, or board roles
- Number and approximate ages of children (from public sources only)
- Family foundation (if exists)
- Family giving history (joint gifts, family fund)
- Spouse's church, employer, or community involvement

Search Process

Step 1: Check existing data (instant, \$0.00)

! Property records: co-owner name (often spouse)
! FEC data: search same last name + same address for

spouse's political contributions
! 990 cross-ref: family foundation check (990-PF with matching last name + city)

Step 2: People Data Labs enrichment (optional, \$0.10)

! Returns: household members, related profiles
! Reliability: moderate for spouse, low for children

Step 3: Agentic search — 2 queries (\$0.05–0.08)

! Query 1: "{Full Name}" wife OR husband OR spouse OR family "{City}"
! Query 2: "{Last Name}" foundation OR "family fund" "{City}" OR "{State}"

! Agent reads social bios, wedding announcements, foundation 990 listings, family business pages

! Extracts: spouse name, children count (if public), family foundation name + EIN

Step 4: If spouse found — mini-enrichment (\$0.03–0.05)

! Single search: "{Spouse Name}" church OR board OR volunteer "{City}"

! Purpose: discover if the spouse is the stronger YF affinity match (common pattern: wife is more faith-community engaged than husband)

Cost

Approach · Process · Cost · Gettability

Best case · PDL + 2 agent queries + spouse mini-search · \$0.15 · 45

Best value · Property co-owner + FEC household + 1 agent query · \$0.05 · 32

Recommendation: The spouse mini-enrichment (Step 4) often surfaces the most actionable result in the entire family search. A spouse who chairs the PTA at a school that does YF partnerships, or who is on the women's ministry team at a YF partner church, is a better entry point than the prospect themselves.

6. Connection Paths to YF Network

Value: 80 | Gettability: 50

Why 80: This is the bridge between "we know about them" and "we can reach them." Detailed in the connection mapping doc (agentic-connection-mapping.md), but this entry covers the single-button version: "find me one connection path to this person through our existing network."

Why 50 gettability: Depends entirely on how well-populated the YF insiders table is. With 15 insiders × 10 affiliations each, there are 150 possible connection points. With 50 insiders × 15 affiliations, there are 750. The gettability score scales linearly with the size of the internal network graph.

What you're looking for:

- A YF insider who shares a board, church, employer, club, or neighborhood with the prospect
- A specific shared context that makes the introduction natural
- An approach suggestion: how the connector brings up Youthfront

Search Process

Step 1: Internal graph query (instant, \$0.00)
 !' Query YF insiders table for any shared affiliation with the prospect's known boards, church, employer, ZIP, clubs, alma mater
 !' Returns: list of (connector, shared context, type)

Step 2: If no internal match — agentic search (\$0.08–0.12)
 !' For top 3 most likely YF insiders (by geography/industry), run:
 !' Query: "{Prospect Name}" "{YF Insider Name}"
 !' Searches for any co-mention, co-attendance, or shared affiliation not captured in structured data

Step 3: Path scoring (instant or \$0.03)
 !' If matches found: score by connection type (board 90, church 85, employer 75, social 65, geographic 40)
 !' Rank by connector willingness × relationship strength
 !' Generate 1-sentence approach suggestion
 !' Deterministic scoring: \$0.00
 !' LLM-generated approach narrative: \$0.03 (Sonnet)

Cost

Approach · Process · Cost · Gettability

Best case · Internal graph + 3 agent co-mention queries + Sonnet narrative · \$0.40 · 50

Best value · Internal graph query only + deterministic scoring · \$0.05 · 35

Recommendation: Start with the internal graph query for every prospect. It's instant and free. Only escalate to agent search when the graph returns zero matches for a high-priority prospect.

7. Property & Real Estate

Value: 75 | Gettability: 80

Why 75: Property ownership is the most reliable, publicly available wealth signal. In KC metro, a \$1.2M home in Mission Hills tells you something very different than a \$250K home in Lee's Summit. Multiple properties, commercial holdings, and recent purchases signal investable wealth. However, property alone doesn't tell you whether someone *will* give — only that they *can*.

Why 80 gettability: Property records are public in every US county. ATTOM aggregates them nationally. County assessor websites (Jackson County MO, Johnson County KS) offer free online lookup. This is one of the easiest fields to find.

What you're looking for:

- Primary residence (address, assessed value, square footage)
- Additional properties (vacation homes, rental properties, land)
- Recent transactions (purchases, sales, refinances)
- Property value trajectory (appreciation over time)
- Co-owners (often reveals spouse)

Search Process

Step 1: ATTOM Data API (\$0.10–0.20)

- ! Lookup by owner name + city/state
- ! Returns: all properties owned, assessed values, sale history, property characteristics
- ! Most complete single source

Step 2 (alternative to Step 1): County assessor lookup via agent (\$0.03)

- ! Agent navigates to county assessor website:
 - Jackson County MO: <https://jacksoncountypao.com>
 - Johnson County KS: <https://ims.jocogov.org>
 - Wyandotte County KS: manual lookup
 - Clay/Platte County MO: manual lookup
- ! Query 1: "{Full Name}" site:jacksoncountypao.com OR site:ims.jocogov.org
- ! Agent extracts: assessed value, property type, address
- ! Less reliable than ATTOM (sites may block automated access) but free

Step 3: Wealth inference (instant, \$0.00)

- ! If assessed value > \$750K ! capacity score +15
- ! If multiple properties ! capacity score +10
- ! If Mission Hills/Leawood/Hallbrook ! capacity score +5 (neighborhood premium)
- ! Deterministic scoring, no LLM needed

Cost

Approach · Process · Cost · Gettability

--- · --- · --- · ---

Best case · ATTOM API (comprehensive, structured) · \$0.20 · 80

Best value · Agent county assessor search (1 query) · \$0.03 · 55

Recommendation: ATTOM is worth it for Tier 1–3 prospects. At \$0.20/call, enriching all 2,249 Tier 1–3 prospects costs \$450 — and you get the single most reliable wealth data point for each. For on-demand Tier 4 lookups, the agent approach works for the majority of KC metro prospects.

8. Net Worth / Wealth Estimate

Value: 75 | Gettability: 35

Why 75: A calibrated net worth estimate sets the ask amount ceiling. Without it, development officers either ask too low (leaving money on the table) or too high (offending the prospect). However, it shares the 75 score with property because the estimate is often *derived from* property + salary + giving — the number itself is less important than the underlying signals.

Why only 35 gettability: True net worth is private. WealthEngine and similar tools provide modeled estimates with ±30% accuracy. For public company executives, SEC filings give you hard data. For private company owners, the estimate is speculative. For most Tier 3–4 prospects, you'll get a range at best.

What you're looking for:

- Modeled net worth range (e.g., "\$2M–\$5M")
- Investable assets estimate
- Income range
- Liquidity indicators (recent stock sales, business exits, inheritance)
- Forbes/wealth list inclusion

Search Process

Step 1: WealthEngine API (\$0.75)

- ! Returns: modeled net worth, income range, investable assets, P2G (propensity to give) score
- ! Most authoritative single source
- ! Only cost-justified for Tier 1–2

Step 2: Agentic search — 2 queries (\$0.05–0.08)

- ! Query 1: "{Full Name}" "net worth" OR wealth OR "rich list" OR Forbes OR Ingram's
- ! Query 2: "{Full Name}" "{Employer}" revenue OR funding OR acquisition OR IPO OR exit
- ! Agent infers from: company scale, role level, industry compensation norms, known property

Step 3: Triangulation (instant, \$0.00)

- ! Combine signals from other already-known fields:
 - property value + salary inference + political giving + board service at major institutions
- ! Apply heuristic:
 - Property \$1M+ and VP+ title ! likely \$2M–\$10M
 - Property \$500K–\$1M and mid-career ! likely \$500K–\$2M
 - Political giving \$50K+ ! likely \$2M+ (people don't give 10%+ of net worth to politics)
- ! This deterministic inference is often as useful as WealthEngine's model

Cost

Approach · Process · Cost · Gettability

Best case · WealthEngine + 2 agent queries + triangulation · \$0.85 · 35

Best value · 2 agent queries + triangulation from existing data · \$0.08 · 25

Recommendation: WealthEngine is a Tier 1–2 luxury ($\$0.75 \times 71 = \53). For Tier 3+, the triangulation heuristic — property + salary + political giving — gets you a usable range. The development officer doesn't need "\$3.2M net worth"; they need "this person can likely give \$5K–\$25K annually."

9. Professional Bio & Career

Value: 70 | Gettability: 85

Why 70: Career context tells you how to talk to someone. A retired Cerner VP needs a different approach than an active real estate developer. The career arc reveals: (a) what language resonates (entrepreneurial vs. corporate vs. academic), (b) when they have time for philanthropy (retired = more bandwidth), (c) what they'd find flattering (advisory role, speaking opportunity, leadership council).

Why 85 gettability: Professional information is the easiest to find. LinkedIn profiles are semi-public. Company websites list leadership. Press releases announce hires and promotions. Most professionals above manager-level have a findable digital footprint.

What you're looking for:

- Current title and employer
- Career trajectory (promotions, company changes, industry focus)

- Key accomplishments (awards, publications, patents, media quotes)
- Education (undergraduate and graduate)
- Speaking engagements and conference appearances
- Retirement status (actively working vs. retired/advisory)

Search Process

,

Step 1: People Data Labs enrichment (\$0.10)

- ! Returns: current title, employer, job history, education, LinkedIn URL, skills
- ! Most complete structured source

Step 2 (alternative): Agentic search — 1 query (\$0.03)

- ! Query: "{Full Name}" "{Employer}" LinkedIn OR biography OR profile
- ! Agent reads LinkedIn profile (if public) or company bio page
- ! Extracts: title, career history, education

Step 3: If notable — deeper search (\$0.03)

- ! Query: "{Full Name}" award OR speaker OR interview OR "press release"
- ! For people in senior roles, this often returns media coverage that reveals personality, values, and communication style

,

Cost

Approach · Process · Cost · Gettability

--- · --- · --- · ---

Best case · PDL + 1 agent query + notable-person search · \$0.12 · 85

Best value · 1 agent query (LinkedIn/bio search) · \$0.03 · 70

Recommendation: PDL is the most efficient single API call in the entire enrichment stack — \$0.10 returns structured data across career, education, and social profiles. If you're buying any paid API, buy this one.

10. Employer & Compensation

Value: 68 | Gettability: 75

Why 68: Overlaps significantly with Professional Bio (#9) and Property (#7) as a capacity signal. Employer + title lets you infer compensation from industry benchmarks. The employer itself matters for corporate giving programs, matching gifts, and whether the company has a relationship with Youthfront. Scores lower than Professional Bio because the development officer needs the narrative ("who is this person?") more than the data point ("they make \$350K").

Why 75 gettability: Current employer and title are nearly always findable (LinkedIn, company websites, FEC filings already have this). Actual compensation is harder — only available for public company executives (SEC proxy statements), nonprofit officers (990 filings), and government employees (public salary databases).

What you're looking for:

- Current employer and title (confirm what FEC data shows)
- Compensation (actual if available, inferred from title + industry + geography)
- Company size and revenue (context for role seniority)
- Matching gift program (does employer match charitable gifts?)

- Corporate philanthropy team (does employer give to youth/faith orgs?)

Search Process

Step 1: Check existing data (instant, \$0.00)

- ! FEC records already contain employer + occupation for ~85% of prospects
- ! 990 cross-ref shows compensation for nonprofit officers

Step 2: Agentic search (if FEC data seems outdated) (\$0.03)

- ! Query: "{Full Name}" "{City}" title OR role OR position OR company
- ! Confirm current employer matches FEC data
- ! If different: prospect changed jobs since last FEC filing (important signal)

Step 3: Compensation inference (instant, \$0.00)

- ! SEC proxy: check if employer is public company and prospect is a named executive officer
- ! If not: infer from title + industry + city using Glassdoor/Levels.fyi ranges (agent can do a single search if needed)
- ! Apply to capacity scoring

Step 4: Corporate match check (\$0.03)

- ! Query: "{Employer}" "matching gift" OR "corporate giving" OR "community investment"
- ! If match program exists: flag for development officer (doubles donor's impact, easy sell)

Cost

Approach · Process · Cost · Gettability

--- · --- · --- · ---

Best case · PDL + agent confirmation + compensation search + match check · \$0.12 · 75

Best value · Existing FEC data only (already harvested) · \$0.00 · 60

Recommendation: Most of this field is already covered by the FEC harvest. The main reason to search is to confirm currency (has the person changed jobs since their last political contribution?) and check for matching gift programs.

11. KC Prominence & Media

Value: 60 | Gettability: 60

Why 60: Local prominence signals a prospect's ego, community investment, and social accessibility. Someone on the KC Business Journal's "Power 100" list cares about their public image — which means naming opportunities, public recognition, and advisory council invitations are effective cultivation tools. However, prominence doesn't guarantee affinity with Youthfront's specific mission, so it scores below fields that directly indicate *why someone would give to YF*.

Why 60 gettability: Prominent people are by definition publicly visible. But KC-specific prominence data is scattered across paywalled publications (Business Journal), annual magazine issues (Ingram's 250), and ephemeral event coverage. Some of this data was identified in the harvest setup but not yet systematically collected.

What you're looking for:

- KC Business Journal mentions (Power 100, 40 Under 40, industry lists)
- Ingram's Magazine features (250 list, industry profiles)
- KC Chamber involvement (committees, leadership roles)
- Awards and honors (local and industry)
- Media quotes and interviews (KC Star, local TV, industry press)
- Event hosting, sponsorship, or keynote appearances

Search Process

,

Step 1: Agentic search — 2 queries (\$0.05–0.08)

! Query 1: "{Full Name}" "Kansas City Business Journal"
OR "KCBJ" OR Ingram's OR "KC Chamber" OR "Civic
Council"

! Query 2: "{Full Name}" award OR honor OR "40 under
40" OR keynote OR "power list" "{Kansas City}"

! Agent reads result snippets, extracts: publication,
list name, year, context

Step 2: If prominent — fetch key article (\$0.02)

! Fetch the most substantive article or profile
! Extract quotes, personal details, values statements
! These often reveal personality and communication
preferences useful for cultivation

,

Cost

Approach · Process · Cost · Gettability

--- · --- · --- · ---

Best case · 2 agent queries + 1 page fetch · \$0.08 · 60

Best value · 1 agent query (combined terms) · \$0.03 · 45

12. Education & Alumni

Value: 45 | Gettability: 70

Why 45: Education is a moderately useful connection and cultivation signal. Shared alma mater between a prospect and a YF insider is a real (if weak) connection path. Degree type signals professional trajectory (MBA !' business mindset, seminary !' faith focus, education degree !' potential youth program affinity). But education alone rarely drives a giving decision.

Why 70 gettability: PDL and LinkedIn reliably return education data. Agent search finds it in bios and press releases. University alumni directories are harder to access but not needed — the degree + institution is usually enough.

What you're looking for:

- Undergraduate institution and degree
- Graduate degrees (MBA, JD, MD, MDiv, etc.)
- University board or advisory roles (signals loyalty + capacity)
- Athletic involvement (boosters, former athletes — different fundraising psychology)

Search Process

,

Step 1: People Data Labs (\$0.00 — included if PDL already called)

! Returns: schools, degrees, graduation years

Step 2 (if PDL not used): Agentic search — 1 query (\$0.03)

! Query: "{Full Name}" alumni OR university OR degree
OR graduated "{City}"

! Agent extracts from LinkedIn, bio pages, or press
releases

Step 3: Alumni cross-ref (instant, \$0.00)

! Check if any YF insider shares the same alma mater

! Weak connection signal but useful as supplementary
path when stronger paths exist

Cost

Approach · Process · Cost · Gettability

--- · --- · --- · ---

Best case · PDL (bundled) + 1 agent confirmation · \$0.10 · 70

Best value · 1 agent query · \$0.03 · 55

13. Social Media Profiles

Value: 40 | Gettability: 75

Why 40: Social media profiles are a gateway to other information rather than valuable in themselves. A LinkedIn profile gives you career history. A public Facebook profile might show church check-ins, family photos, or fundraiser participation. An X/ Twitter profile reveals political and social values. But for the average KC donor prospect over 45, social media is a secondary data source — not the primary.

Why 75 gettability: LinkedIn profiles exist for most professionals. Other platforms are hit-or-miss for the 45–70 age demographic.

What you're looking for:

- LinkedIn URL (already the most useful for career data)
- Facebook (church check-ins, event attendance, family context)
- X/Twitter (values, political engagement, community interests)
- Instagram (lifestyle indicators, rarely useful for prospect research)

Search Process

,

Step 1: People Data Labs (\$0.00 — included if PDL already called)

! Returns: LinkedIn URL, sometimes Facebook/Twitter handles

Step 2 (if PDL not used): Agentic search — 1 query (\$0.03)

! Query: "{Full Name}" "{Employer}" LinkedIn OR
Facebook OR Twitter site:linkedin.com OR
site:facebook.com OR site:x.com

! Agent returns profile URLs

,

Cost

Approach · Process · Cost · Gettability

--- · --- · --- · ---

Best case · PDL (bundled) · \$0.10 · 75

Best value · 1 agent query · \$0.03 · 60

14. Club & Social Memberships

Value: 38 | Gettability: 25

Why 38: Country club and social organization memberships signal wealth tier and social circles. Mission Hills Country Club members are a specific, identifiable KC wealth cohort. Kansas City Club membership signals business elite status. But club membership alone doesn't indicate affinity with YF's mission — it's a weak capacity signal and a moderate connection signal.

Why only 25 gettability: Private clubs do not publish member lists. The only way to find this information is through indirect mentions — social media check-ins, event photos, news articles mentioning "hosted at Kansas City Club," or the club's own 990 filing (if 501(c)(7)) listing officers only. This is one of the hardest fields to search for.

What you're looking for:

- Country club memberships (Mission Hills, Indian Hills, Hallbrook, Milburn, Blue Hills)
- Social/business clubs (Kansas City Club, University Club)
- Service clubs (Rotary, Kiwanis — less wealth signal but community engagement)
- Private school parent associations (Pembroke Hill, Rockhurst, Barstow)

Search Process

,

Step 1: Agentic search — 2 queries (\$0.05–0.08)

! Query 1: "{Full Name}" "country club" OR "Kansas City Club" OR Rotary OR "{known KC club names}"

! Query 2: "{Full Name}" Pembroke OR Rockhurst OR Barstow OR "private school" "{Kansas City}"

! Agent looks for: event photos at clubs, social media mentions, news articles, club officer listings in 990s

Step 2: 990 cross-ref for club officers (instant, \$0.00)

! 501(c)(7) filings list officers of social clubs

! If prospect is an officer of a club, this is already in the 990 harvest (or could be added to harvest scope)

,

Cost

Approach · Process · Cost · Gettability

--- · --- · --- · ---

Best case · 2 agent queries + 990 club officer check · \$0.08 · 25

Best value · 1 agent query (combined terms) · \$0.03 · 18

Recommendation: Low gettability makes this a poor candidate for automated search. Better discovered through the YF insider network — board members who are themselves club members can identify fellow members directly.

15. Political Giving Detail

Value: 30 | Gettability: 95

Why only 30: We already have political giving totals from the FEC harvest for 95% of prospects. The *detail* (which committees, which candidates, which party) provides some additional signal — bipartisan givers are more likely to give to nonprofits; single-party maxed-out givers may prioritize political over charitable giving. But this information rarely changes the cultivation

approach. It's already the most over-indexed field in the dataset.

Why 95 gettability: OpenFEC is comprehensive, free, and already harvested. This is effectively a solved field.

What you're looking for:

- Nothing new — already harvested
- Possible enrichment: categorize committees by type (PAC, party, candidate, issue)
- Possible enrichment: identify giving trend (increasing, decreasing, sporadic)

Search Process

,

Step 1: Query existing data (instant, \$0.00)

- !' prospect.political.total_giving
- !' prospect.political.contribution_count
- !' prospect.political.committees[]

Step 2: If needed — trend analysis (instant, \$0.00)

- !' Sort contributions by date
- !' Compute: is giving increasing or decreasing?
- !' Compute: partisan lean (R/D/I ratio)
- !' All deterministic, no API or agent needed

,

Cost

Approach · Process · Cost · Gettability

--- · --- · --- · ---

Best case · Already harvested + deterministic trend analysis · \$0.00 · 95

Best value · Same · \$0.00 · 95

16. Children & Schools

Value: 28 | Gettability: 20

Why 28: Knowing that a prospect has children in the 6–17 range makes YF Camp a concrete, immediate offering. But this is sensitive information, and the cultivation value is limited — you can learn this in the first conversation. The value score reflects that while useful, it's not worth significant search investment and carries privacy considerations.

Why only 20 gettability: Information about minor children is (appropriately) hard to find online. School enrollment is not public. The best signals are indirect: family foundation filings sometimes list family members, school fundraiser participation, PTA roles, children's sports league coaching.

What you're looking for:

- Number of children (approximate)
- Age range (school-age? college? adult?)
- Schools attended (if publicly shared by parents)
- Children's extracurricular involvement (if parent is publicly coaching or fundraising)

Search Process

,

Step 1: Check existing data (instant, \$0.00)

- !' Family search (#5) may have already found children as a secondary result
- !' PDL household data sometimes includes related profiles

Step 2: Agentic search — 1 query (\$0.03)
 !' Query: "{Full Name}" children OR family OR "proud parent" OR kids "{City}"
 !' Agent reads only publicly shared content (social media posts, family foundation pages, school fundraiser mentions)
 !' Does NOT attempt to access school records, directories, or any non-public source

Step 3: Camp-age inference (instant, \$0.00)
 !' If children found with approximate ages:
 - Ages 6–17: "Camp-age children — YF Camp is a tangible offer"
 - Ages 18+: "Adult children — camp nostalgia angle if they attended as youth"
 - Preschool: "Future camper family — long-term cultivation"

Cost

Approach · Process · Cost · Gettability

--- · --- · --- · ---

Best case · 1 agent query + age inference · \$0.08 · 20

Best value · Skip — learn in first conversation · \$0.03 · 12

Summary: The Search Button Menu

If the UI presents these as individual clickable buttons on a prospect card, here's the complete menu sorted by value × gettability (the fields most worth searching for):

Button Label · Value × Get · Best Case · Best Value · Run When?

--- · --- · --- · --- · ---

Find Board Roles · 61.6 · \$0.15 · \$0.00 · Always (free at best value)

Find Property · 60.0 · \$0.20 · \$0.03 · Always (high reliability)

Find Career & Bio · 59.5 · \$0.12 · \$0.03 · Always (high reliability)

Find Employer · 51.0 · \$0.12 · \$0.00 · On-demand (often already known)

Find Giving History · 49.5 · \$0.50 · \$0.05 · Tier 1–3 prospects

Find Connection Paths · 40.0 · \$0.40 · \$0.05 · After other fields populated

Find Church · 38.0 · \$0.12 · \$0.03 · Always for YF (highest *value*)

Find Family · 36.9 · \$0.15 · \$0.05 · Tier 1–2, or when spouse name known

Find Media/Prominence · 36.0 · \$0.08 · \$0.03 · Tier 1–2 prospects

Find Education · 31.5 · \$0.10 · \$0.03 · On-demand

Find Social Profiles · 30.0 · \$0.10 · \$0.03 · On-demand

Find YF Connection · 29.4 · \$0.05 · \$0.00 · Always first (nearly free, highest value)

Political Detail · 28.5 · \$0.00 · \$0.00 · Already have it

Find Clubs · 9.5 · \$0.08 · \$0.03 · Rarely (low gettability)

Find Children · 5.6 · \$0.08 · \$0.03 · Rarely (learn in conversation)

"Search All" Button Cost

If a single "Enrich Everything" button triggers all 16 searches:

Approach · Total Cost · Expected Fields Populated

--- · --- · ---

Best case (all buttons) · \$2.65 · ~11 of 16 fields

Best value (all buttons) · \$0.39 · ~8 of 16 fields

Smart selective (top 8 buttons only) · \$0.24 (best value) · ~6 of 16 fields

Recommended Default: "Quick Enrich" vs. "Deep Enrich"

Quick Enrich (auto-triggered on prospect view, \$0.11):

1. Find YF Connection (\$0.00)
2. Find Board Roles (\$0.00)
3. Find Church (\$0.03)
4. Find Property (\$0.03)
5. Find Career (\$0.03)
6. Political Detail (\$0.00)
7. Find Employer (\$0.00 — existing FEC data)

Deep Enrich (user clicks explicitly, adds \$0.28–\$2.54):

8. Find Giving History (\$0.05–\$0.50)
9. Find Family (\$0.05–\$0.15)
10. Find Connection Paths (\$0.05–\$0.40)
11. Find Media/Prominence (\$0.03–\$0.08)
12. Find Net Worth (\$0.08–\$0.85)
13. Find Education (\$0.03–\$0.10)
14. Find Social Profiles (\$0.03–\$0.10)
15. Find Clubs (\$0.03–\$0.08)
16. Find Children (\$0.03–\$0.08)

articles/linkedin-mcp-server.md

LinkedIn MCP Server

Source: stickerdaniel/linkedin-mcp-server (<https://github.com/stickerdaniel/linkedin-mcp-server>)

Transport: stdio via uvx linkedin-scraper-mcp

Session data: ~/.linkedin-mcp/profile/

What It Does

Gives Claude direct access to LinkedIn data through browser automation (Patchright). Claude can look up people, companies, job postings, and search results without you needing to copy-paste from LinkedIn.

Available Tools

Tool · What it does

--- · ---

get_person_profile · Pull a LinkedIn profile — name, headline, experience, education, skills. Sections are selectable.

get_company_profile · Company page data — description, size, industry, specialties.

get_company_posts · Recent posts from a company's LinkedIn feed.

search_people · Search for people by keywords, location, company, etc.

search_jobs · Search job postings with keyword and location filters.

get_job_details · Full details on a specific job posting.

close_session · Clean up the browser session.

How to Use in Conversation

Just ask Claude naturally. Examples:

- "Look up John Smith's LinkedIn profile"
- "Search LinkedIn for CFOs in Kansas City"
- "Get the company profile for Hallmark Cards on LinkedIn"
- "Find recent posts from the Kauffman Foundation LinkedIn page"
- "Search for development director jobs in Kansas City"

Claude will call the appropriate LinkedIn MCP tool automatically.

Setup & Maintenance

Prerequisites

- uv installed (`curl -LsSf https://astral.sh/uv/install.sh | sh`)
- Patchright Chromium: `uvx patchright install chromium`

Initial Login

```
``bash
uvx linkedin-scraper-mcp --login
`
```

This opens a browser window. Log into LinkedIn manually (5 min timeout, supports 2FA). The session saves to `~/.linkedin-mcp/profile/`.

Re-authentication

If LinkedIn invalidates the session (password change, security flag, etc.), re-run the login command above.

Claude Code Config

Already configured. The MCP server entry lives in the project's `.claude.json`:

```
`json
{
  "mcpServers": {
    "linkedin": {
      "command": "uvx",
      "args": ["linkedin-scraper-mcp"]
    }
  }
}
`
```

CLI Options

Flag · Purpose

--- · ---

- `--login` · Open browser for manual LinkedIn login
- `--no-headless` · Show browser window (debugging)
- `--log-level DEBUG` · Verbose logging
- `--timeout <ms>` · Browser operation timeout

Relevance to Donor Intelligence

This server is critical for the connection mapping workflow described in `agentic-connection-mapping.md` (`agentic-connection-mapping.md`). Key use cases:

- Prospect enrichment: Pull current title, company, and bio for donor prospects
- Connection discovery: Search for mutual connections between board members and prospects
- Company intel: Get organization details for corporate giving prospects
- Board/volunteer overlap: Identify shared nonprofit board memberships via profile data

Limitations

- LinkedIn rate-limits and may flag automated access. Use judiciously.
- Session can expire; re-run --login if tools start failing.
- Scraping may violate LinkedIn's Terms of Service. Use for authorized research only.
- Old session.json files and LINKEDIN_COOKIE` env vars no longer work (breaking change Feb 2026). Must use Patchright persistent profiles.

Slide 1 — Title

!Partnership and strategy (<https://images.unsplash.com/photo-1552664730-d307ca884978?w=800&q=80>)

Youthfront × Movemental

A 30 / 60 / 90 Day Plan — Governance, Donors, and Content in Your Voice

Clear benchmarks. Minimal time. One roadmap.

Slide 2 — Why we're here

- You need clarity on AI before it's asked of you by ECFA, donors, or partners.
- You need donor intelligence that fits your mission and your ethics—not a generic vendor playbook.
- You need content and fundraising strategy that sounds like Youthfront: formation, belonging, "true empathy and love," not a formula.
- You don't have bandwidth for a long, scattered process. You need one path, defined outcomes, and minimal executive time.

Slide 3 — What you're feeling (pain points we hear)

- "We don't have one place that says who we are." Identity and strategy are everywhere—hard to brief staff, vendors, or AI, and to judge if output is on-mission.
- "Revenue is variable; we need better donor relationships—without losing our soul." Deficit years and contribution swings; development is stretched; you want a system that's ethical and mission-aligned.
- "If we use AI, does that make us formulaic?" You've said formation is not a formula. You need a stance that protects that—and that you can state clearly.
- "We can't say what we'd tell ECFA or a major donor today." No single governance artifact; no single owner; risk and compliance feel open-ended.
- "We don't have time for a huge project." You need something that meets you where you are and doesn't demand a full-time AI owner.

Slide 4 — The offer in one sentence

!90-day roadmap (<https://images.unsplash.com/photo-1507925921952-c1711a2b8f5f?w=700&q=80>)

In 90 days, with a maximum of 4 hours of executive time (or as little as 2 hours with one delegated lead), you get:

- Day 30: Publishable governance, AI & ethics guidelines + single source of truth + Youthfront-specific AI strategy (digital + print).
- Day 60: Your full donor dashboard—owned by you.
- Day 90: Your full fundraising content and engagement strategy—and the content itself in Youthfront's voice—digital and print, plus a plan.

Slide 5 — 30-day benchmark (deliverables)

- Publishable, printable, digital documentation of Youthfront's fully developed governance, AI, and ethics guidelines (board-ready; ECFA- and donor-ready).
- Full organizational single source of truth — identity, strategy, messaging, case for support—also digital, printable, publishable (you cover print costs; you own all formats).
- Youthfront-specific AI strategy — scope, limits, ownership, and adoption order—tied to your values and your Base.
- Your time: Maximum 4 hours of executive time total (or 2 hours with one person who has authority to act as bridge and carry decisions to the right people).

Slide 6 — 60-day benchmark (deliverables)

- Your full donor dashboard — owned by you.
- Lead cross-reference, search, and donor intelligence in one place, aligned with your governance and data rules.
- Ready to connect to your CRM and your workflow; no lock-in to a vendor's black box.

Slide 7 — 90-day benchmark (deliverables)

- Full fundraising content and engagement strategy — the plan.
- The content itself in Youthfront's voice: appeals, updates, key messages—digital and print.
- All anchored to your single source of truth and messaging guide ("church-assisting," "not a formula," "true empathy and love").
- What we need from you: Editorial approval along the way—focused checkpoints so the content chain stays on-voice and on-mission.

Slide 8 — What we're asking from you (the ask)

- Retainer: \$10,000/month for 3 months (90-day commitment).
Covers: governance + Base + AI strategy (30), donor dashboard ownership (60), fundraising content strategy + content in your voice (90).
- Time: Up to 4 hours total executive time over 90 days (or 2 hours with one delegated lead).
- Editorial approval: Clear checkpoints so every external-facing piece is approved by you before use—no surprises.

Slide 9 — What we're inviting: partnership and referral

- 50/50 referral plan — For anyone Youthfront refers to us: one year, renewable. You refer; we share the referral reward 50/50.
- Why: We want you in the room as business partners, not only clients. That means:
 - You see actual pricing and business model for other organizations.
 - You're invited into refinement and co-creation of a profitable, scalable offer.
 - You see how we scale—and that we've built the capacity to deliver this without losing personalization.

Slide 10 — Plan vs. products (what you get)

Phase · Deliverable · Format

----- · ----- · -----

30 days · Governance, AI & ethics guidelines · Publishable, printable, digital

30 days · Single source of truth (Base) · Digital, printable, publishable

30 days · Youthfront-specific AI strategy · Document + adoption order

60 days · Donor dashboard · Owned by you; your instance

90 days · Fundraising content & engagement strategy · Plan + content in your voice

90 days · Content (appeals, updates, key messages) · Digital + print (you pay print)

Slide 11 — Pricing: you vs. market

- This engagement (Youthfront): \$10K/month × 3 months = \$30,000 for the full 30/60/90 bundle (governance + Base + AI strategy + donor dashboard + content strategy + content).
- Typical market (equivalent scope):
 - Base/identity hub: \$8,500–\$14,000 (one-time).
 - AI governance & ethics: \$6,000–\$10,000 (fixed).
 - Donor intelligence (setup + year 1): \$12,000–\$18,000.
 - Content workflow + strategy + content: \$4,000–\$7,000 (project) + ongoing.
 - Rough aggregate: \$30,500–\$49,000+ and 25–50+ hours of your time (agency discovery, reviews, board prep).
- Your deal: One retainer, one timeline, 4 hours max (or 2 with delegation) and one relationship—not three vendors and three processes.

Slide 12 — Pricing: other organizations (transparent)

- For other organizations (no referral relationship), equivalent scope would be priced at:
 - ~\$32,000–\$38,000 for the same 90-day bundle, or
 - Component pricing as in the market-comps table (Base, governance, donor intelligence, content) if they buy in slices.
- Youthfront pricing reflects founding-partner terms: locked 90-day retainer, referral upside, and co-creation access. You're seeing the real model so you can help shape it.

Slide 13 — The path ahead (what happens next)

1. Agreement — 3-month commitment, \$10K/month, 50/50 referral terms, editorial checkpoints.
2. Kickoff — Align on single point of contact (or small team); confirm 4-hour max (or 2-hour delegated) and approval rhythm.
3. Day 1–30 — Single source of truth + governance/AI/ethics docs + Youthfront AI strategy; your review and sign-off; deliverable: publishable, printable docs + strategy.
4. Day 31–60 — Donor dashboard configured and handed over; training and ownership transfer.
5. Day 61–90 — Fundraising content and engagement strategy + content in your voice; editorial approval at each stage; final plan and assets (digital + print-ready).
6. Ongoing — Referral partnership and optional co-creation conversations (pricing, product, scale).

Slide 14 — Why Movemental can deliver (and why it's rare)

- Personalization: Built for ministry and nonprofit from day one. Your language—VIM, formation, "not a formula," ECFA, church-assisting—is already in the system. No generic agency learning curve.
- Quality: Governance and ethics deliverables are board- and accreditor-ready. Donor intelligence and content are anchored to your Base and messaging guide—no off-voice or off-mission output.
- Time: We've designed the 30/60/90 flow so you spend hours, not weeks, in meetings. One delegated lead can carry the process; we don't need the full table for every step.
- Integration: One place for identity, donors, and content. No piecing together three vendors and three timelines.
- Likelihood of finding this elsewhere: Market comps show AI governance + ministry depth in one offer is rare. Nonprofit AI agencies run 50–65% of the "meet you where you are" fit for an org like Youthfront; church consultants rarely offer AI governance and donor intelligence. You're not likely to find this combination, at this time commitment, elsewhere.

Slide 15 — Summary and next step

- 30 days: Governance + Base + AI strategy (publishable, printable). 4 hours max (or 2 with one lead).
- 60 days: Your donor dashboard. Owned by you.
- 90 days: Fundraising content strategy + content in your voice. Digital + print. Editorial approval built in.
- Terms: \$10K/month × 3 months. 50/50 referral, 1 year, renewable. Co-creation and transparency on pricing and scale.

- Next step: Confirm interest; schedule a short call to align on contact, approval rhythm, and start date.

What a Sandbox Season Looks Like at Youthfront

A two-page picture of how the sandbox season would run at Youthfront specifically. Composite in the sense that the season has not yet happened — grounded in the actual programs, people, data, and constraints that shape Youthfront's real work in 2026.

Where you are when we start

Revenue is down \$765K year-over-year. The board is asking what Youthfront is doing about AI. Donors — and ECFA — are asking how you use it. You have five strong executives, no board-approved stance, and three programs (Camp, Neighborhood, Family Ministries) that touch youth and families in ways where the wrong AI decision is not recoverable. You do not have a governance problem in the technical sense. You have a **pace** problem: the conversations you need to have about AI are moving faster than the structure you have to hold them.

The team we assemble

Five seats at the table, plus one observer-veto role and one rotating seat.

Senior Sponsor: Mike King (CEO). Attends Weeks 1, 6, and 12. Owns the board-facing narrative. Defends the portfolio to the board.

Portfolio Owner: Natasha Nikkel (COO). Every session. Primary Movemental contact throughout. Natasha already owns the operational AI inventory for Youthfront — **who uses what, where** — which is exactly the spine the portfolio is built on. She leaves the season as the internal owner capable of running the next one without us.

Safety Owner: Mike King. Writes the ethical and relational flag paragraphs in Weeks 8 and 10. This is non-delegable at Youthfront — the formation convictions are his, and a flag written by anyone else would not carry the weight needed. Mike's Safety Owner role is narrow (flag weeks) and heavy; Natasha's Portfolio Owner role is wide (every week) and structural. Together they cover the season.

Experiment Team (three operators):

- Lisen Tammeus Mann (VP Development & Marketing). Brings donor-adjacent candidates (thank-you drafting, grant scaffolding, messaging consistency).
- Topher Philgreen (EVP Strategic Initiatives). Brings synthesis and decision-support candidates from his roadmap work. Topher's experiments stay operational — not the governance or AI-strategy work he owns at the executive level.
- One rotating operator from the Development or Neighborhood Ministries team — a communications or development associate — rotates every four weeks to expose three staff to the discipline instead of one.

Observer-Veto: Jim Newberry (VP Ministries). Attends Weeks 2, 3, 8, 10, 12. Does not run experiments. His role is to veto anything that drifts toward formation, youth-facing, or church-partner territory. He is a no-fly enforcer, not an experimenter — the correct use of his gift in Season One.

The boundaries we set on Day 1

The out-of-scope list written into the season charter is the longest part of Week 1.

Out of scope this season, by explicit commitment:

- Anything involving Teen Parent Connect data, participants, or content.
- Anything involving Arise (juvenile justice) data, participants, or content.
- Any camp programming content, curriculum, or counselor-facing materials.
- Any pastoral care, discipleship, or formation writing that bears Youthfront's theological weight.
- Any donor personalization that would produce a message indistinguishable from one Mike or Lisen wrote personally.
- Any church partner-facing research or content that church leaders would read as a Youthfront communication.

In scope this season, by explicit commitment:

- Internal operations writing (board reports, staff memos, internal summaries).
- Development research on existing donors — not new donor prospecting.
- Donor thank-you first-draft assistance, where the first four sentences are always human-written.
- Grant proposal scaffolding and first drafts, where a named human editor is scoped into every workflow.
- Non-public-facing synthesis of reports, filings, and external research.
- Messaging consistency work across the website, donor newsletter, and social copy (internal drafting only; no auto-publishing).

The eight-pattern scan in Week 2

When the five candidates scan Youthfront's actual work through the eight-pattern catalog, the board gets filled out predictably:

- Repetition: Monthly donor thank-yous. Weekly internal staff memo. Monthly board report preamble. Event confirmation sequences for Camp registration.
- Translation: Board report !' donor version. Internal program updates !' ECFA compliance documentation. Camp director reports !' parent communications.
- Synthesis: 990 drafts. Development team's stack of donor research. Staff research on grant opportunities.
- Generation: Grant proposal outlines (many small opportunities). Job descriptions for open roles. Staff policy drafts.
- Transformation: Tone consistency across Lisen's team's varied writing. Clarity rewrites on technical operations documents.
- Structuring: Strategic plan working drafts. Board meeting minutes !' decision log. Retreat outputs !' follow-up plans.
- Decision Support: Budget scenario modeling for FY26. Capacity planning for Camp registration.
- Personalization: *Flagged on arrival. Deferred.*

Fourteen candidates on the board. A disciplined filter cuts to four.

The four experiments we run

Experiment 1: Donor thank-you first-draft assist.

Pattern: Repetition. Owner: Lisen. Reviewer: Natasha. Input: Recent gifts data + prior exemplary thank-yous. Output: Draft with the first four sentences human-written, remainder assisted. Time baseline: 22 min/note. Assisted expected: 12 min/note. Hypothesis: Speed gain of ~45%, with voice preservation contingent on the four-sentence rule.

Experiment 2: Grant proposal scaffolding.

Pattern: Generation. Owner: Lisen's rotating team member. Reviewer: Topher (strategic fit on funder priorities is his domain). Input: Prior successful Youthfront grant proposals + funder's published priorities. Output: Structural outline with placeholder paragraphs. Time baseline: 4 hours for a first scaffold. Assisted expected: 1 hour. Hypothesis: Structural acceleration with no quality loss; all narrative remains human-written.

Experiment 3: Board report preamble synthesis.

Pattern: Synthesis. Owner: Natasha (her actual operational work). Reviewer: Mike. Input: Staff reports from the prior month. Output: 1-page preamble for the board packet. Time baseline: 3 hours/month. Assisted expected: 90 min/month. Hypothesis: Time saved wisely, redeployed into Natasha's operations leadership work.

Experiment 4: Strategic scenario synthesis for FY27 planning.

Pattern: Synthesis (contested source material). Owner: Topher. Reviewer: Natasha. Input: Existing FY26 strategic inputs — board conversations, program updates, financial projections, sector research. Output: Three plausible FY27 scenarios with named trade-offs. Time baseline: 12 hours over two weeks (typical EVP strategic prep). Assisted expected: 6 hours over two weeks. Hypothesis: Assistant helps structure the scenarios; real test is whether it preserves the *genuine disagreements* between plausible futures instead of smoothing them into one coherent-sounding story.

What the scoring comes back as

Predicted composite, to give Mike and the board a realistic picture of how the portfolio usually shapes up:

- Experiment 1 (Donor thank-you): Time saved green, quality yellow (first two runs drift toward generic; run three passes after the four-sentence rule is tightened), risk green, repeatability green. Flag verdict in Week 8: *Yellow, graduates with conditions* — specifically, the four-sentence rule becomes a written Lisen-signed standard, with quarterly audit.
- Experiment 2 (Grant scaffolding): Time saved green (dramatic), quality green, risk green, repeatability green. Flag verdict: *No flag raised. Graduates to portfolio as high-value, low-risk.*
- Experiment 3 (Board report preamble): Time saved green, quality green, risk yellow (Natasha flags a moment when the draft misrepresented a staff report's nuance), repeatability green. Flag verdict: *Yellow. Graduates with conditions* — specifically, every preamble is read against source reports before the board packet ships, which recovers some of the time savings but preserves accuracy.
- Experiment 4 (Strategic scenario synthesis): Time saved green, quality *red* (Topher and Natasha both notice the three scenarios read as coherent variations of one underlying narrative rather than as genuinely disagreeing futures), risk green, repeatability green. Flag verdict: *Red — reroute.* Return to sandbox with a revised experimental design that forces the assistant to hold disagreement rather than resolve it. This is the season's strongest finding: synthesis-pattern work on genuinely contested material needs a different shape than synthesis-pattern work on uncontested material, and Topher owns that learning going into FY27 planning.

The portfolio Natasha hands off at Week 12

Natasha presents the portfolio to the senior team at Week 12; Mike carries it to the board at the next regular meeting. The portfolio itself is Natasha's artifact to own and update.

Graduated (high-value, low-risk) — candidates for Solutions:

1. Donor thank-you first-draft assist (with four-sentence standard).
2. Grant proposal scaffolding (with named human editor).
3. Board report preamble synthesis (with source-check standard).

Held with caution (high-value, Skills-stage):

4. None this season. Personalization and donor-prospecting candidates stayed off the list by design.

Parked:

5. Strategic scenario synthesis — returns to sandbox in Season 2 with a revised design that preserves genuine disagreement between plausible futures.
6. Messaging consistency work — deferred until the Base / messaging guide work has produced a written consistency standard.

Rejected (in the rejection log):

- Any pattern-8 (Personalization) candidates touching donors.
- Any synthesis candidate touching church-partner research.
- Any generation candidate touching Camp curriculum or Neighborhood programming content.

What changes by Day 90

For the board: A governance one-pager Mike can defend in ten minutes. A portfolio one-pager the board chair can hand to a donor who asks *how does Youthfront use AI?* An answer that is not defensive and not triumphalist. The right answer, honestly, at the right scale.

For Lisen: A development function that has safely absorbed two AI-assisted workflows, saving 10–12 hours a week across her team. That time redeploys into major-donor stewardship conversations — the work only she can do.

For Natasha: A working portfolio she owns. An operational AI inventory that has moved from informal knowledge into a governed artifact. A board report rhythm that saves her roughly 90 minutes a month. A reusable rejection log and a season-two scope memo ready for the next cycle. The internal judgment to run Season Two without Movemental — this is the point of Season One at Youthfront.

For Topher: A direct lesson about synthesis under contested material that reshapes how he approaches FY27 planning. The strategic synthesis experiment did not graduate, which is a better outcome for Topher than a false green would have been.

For Mike and the board: An honest answer to the donor and accreditor question. A trained team. A pace that matches Youthfront's actual convictions instead of reacting to the market's.

What does **not** change

- Teen Parent Connect and Arise stay entirely outside any AI workflow in 2026. Season Two considers whether there is any legitimate use case near them; most likely the answer remains no.
- Camp programming, counselor materials, and formation content remain fully human-designed.
- Donor personalization at scale does not happen. Major-donor touch remains Lisen's and Mike's.
- The Youthfront messaging guide becomes **more** of a gating document, not less.

The season does not solve Youthfront's revenue problem. It gives Youthfront an honest, well-governed capacity to respond to the revenue problem without compromising what Youthfront is for. That distinction is the work.

Recommended companion reading for the exec team:

- Canon piece #12: **The AI Stewardship Sequence** — why Safety comes before Sandbox
- Canon piece #15: **The Purpose of Sandbox** — the stage's theory of action
- Sandbox series piece #7: **The Ethical & Relational Flag** — how Mike's Safety Owner role actually works
- Sandbox series piece #8: **Building the Use Case Portfolio** — what the Week 12 handoff looks like

Sandbox Season Capability Brief

Page 1 — Why we wrote this for you specifically

Youthfront is in an AI governance and donor-intelligence inflection point. Revenue is down. ECFA and major donors are asking how you use AI. The board needs a stance. The five of you on the executive team already know what you believe about formation, about youth, about the church-assisting posture — you do not need to be taught any of that. What you need is a twelve-week structure that turns what you believe into a defensible, board-ready AI posture and a small portfolio of use cases that quietly return revenue capacity to Lisen's team and operational capacity to Natasha's.

This is a capability brief, not a proposal. We have not priced a specific engagement yet. The companion tailored proposal, and the one-page version for the board, follow after a first conversation.

Page 2 — The sandbox season in one picture

A sandbox is the second stage of a four-stage arc — Safety, Sandbox, Skills, Solutions — that Movemental uses to walk mission-driven organizations into AI adoption without losing what makes them distinct. Safety is governance and boundaries, which Youthfront is essentially drafting already. Skills is formation of judgment, which comes in a later engagement. Solutions is tools in production, which is years away at the scale that would affect Youthfront's mission.

The Sandbox Season is the middle move. It is a twelve-week, facilitated period where a small cohort of your staff — five to six people across two to three departments — takes real Youthfront work, scans it through a catalog of canonical AI value patterns, runs three cycles of structured experiments, and assembles a validated portfolio of use cases the senior team is willing to stand behind.

What you leave with:

- A validated use-case portfolio (five to ten items, honestly scored).
- A board-ready governance one-pager.
- A trained internal team capable of running the next season without Movemental.

What you do not leave with:

- Tool procurement decisions.
- Deployments into live donor-facing or youth-facing work.
- A slide deck that looks like a program and produces no formation.

Page 3 — Why the order is load-bearing

Most organizations that "try AI" invert the stages. They begin at Solutions (vendor demos, pilot tools), retrofit Skills onto unfamiliar tools, and only later realize Safety should have come first. The inversion costs roughly nine to eighteen months and, for mission-driven organizations, often costs trust as well.

Safety before speed. Sandbox before skills. Skills before solutions. At Youthfront, the order happens to match the way Mike and the board think about ministry already — you do not ship formation work before you know what it is for, and you do not ship AI work before you know what *it* is for either.

A sandbox season is not an AI literacy program. It is a formation curriculum dressed as a process. The season produces recipes your team can run; more importantly, it produces the eye that can spot new recipes and the judgment that can tell which ones are worth taking.

The cohort:

- Senior Sponsor: Mike King (Weeks 1, 6, 12).
- Portfolio Owner and Movemental's primary contact: Natasha Nikkel (all twelve weeks). Natasha already owns the operational AI inventory across Youthfront — the "who uses what, where" view — which makes her the natural spine of the portfolio and the internal lead who carries it forward after Week 12.
- Safety Owner: Mike King. Writes the ethical and relational flags personally. Non-delegable at Youthfront.
- Experiment Team: Lisen Tammeus Mann (VP Dev/Marketing), Topher Philgreen (EVP Strategic Initiatives), plus a rotating development or neighborhood ministries team member every four weeks.
- Observer-veto role: Jim Newberry (VP Ministries). Attends selected weeks; his job is to veto anything that drifts toward formation or youth-facing territory.

The out-of-scope list, written on Day 1 and defended for twelve weeks:

- Teen Parent Connect, Arise (juvenile justice), all camp programming content, any pastoral or discipleship writing, any donor personalization that would be indistinguishable from Mike's or Lisen's personal voice, any church-partner-facing research or messaging.

The in-scope zones where real value is likely:

- Development operations (grant scaffolding, donor research on existing donors, thank-you first-draft assistance with a human-held opening).
- Internal operations writing (board report preambles, staff memos, internal synthesis).
- Messaging consistency work (drafting only, never auto-publishing).

The imagined portfolio at Week 12 is documented in the companion exemplar (05-exemplar.md). The short version: three graduated use cases, none of them near formation or youth, worth roughly 10–12 hours a week in Lisen's team and 90 minutes a month in Natasha's. One experiment — Topher's strategic scenario synthesis for FY27 — ends the season as a red-flag reroute, which is the right outcome and arguably the season's most valuable finding.

Movemental runs this methodology from a published body of work:

- The AI Stewardship Sequence (canon piece #12) — the four-stage sequence.
- The Ethical & Relational Flag (sandbox series piece #7) — Mike's Safety Owner role, written down.
- The Three Kinds of Value AI Legitimately Produces (sandbox series piece #3) — the scoring frame applied in Weeks 5, 7, and 9.
- Discovery Engine, Not Generator (sandbox series piece #9) — why we do not sell you a tool in Season One.

Every session, every template, every flag paragraph traces back to a published canon piece. If at any point the methodology becomes unclear, the canon is readable in about three hours end-to-end.

Movemental is a small practice — Josh Shepherd and a rotating small team — focused on AI adoption with integrity inside mission-driven organizations. We are not a general-purpose nonprofit consultancy. We do not run fundraising campaigns, organizational development, or executive coaching. The scope we hold is narrow on purpose.

What you get from us that you do not get from a generic nonprofit agency:

- Ministry-fluent framing. Formation, calling, church-assisting posture, and theological constraint are not obstacles to work around. They shape the methodology.
- A published body of thinking you can read before signing anything. You are not buying proprietary IP; you are buying our practice of running the method with you.
- A declared scope. We will tell you, explicitly in the proposal, what we will not do inside this engagement. Scope discipline is the product.

What you do not get:

- Ongoing retainer relationships. The engagement ends at Week 12.
- Tool implementation.
- Promises about ROI, revenue recovery, or specific dollar outcomes. The season produces judgment and a portfolio; what you do with them is yours.

Page 7 — Pricing posture (before the proposal)

A Youthfront-scale engagement sits in the Mid zone: \$32,000 fixed fee, paid in three installments against milestones — \$10K at kickoff, \$11K at Week 6 (mid-season review), \$11K at Week 12 (portfolio handoff).

Why milestone-weighted rather than monthly: monthly payments reward drag. Milestone-weighted payments reward completion, and protect both parties if the season needs to pause.

Follow-on products, priced separately and named upfront so you see the full arc:

- Quarterly portfolio refresh: \$4,500 per quarter, ongoing.
- Skills-stage engagement: 16 weeks, \$45,000–\$55,000, priced when Season One completes and the cohort is ready.
- Solutions-stage advisory: Project-based, not priced yet. Not available for at least two quarters after the Sandbox season.

Three-year total commitment if Youthfront runs the full arc: roughly \$110,000–\$140,000. That is the upper bound. Most likely actual: \$32K Sandbox + 4 quarterly refreshes at \$4.5K = \$50,000 for the first full year. Skills-stage engagement optional, by Youthfront's discretion.

Page 8 — What we'd need from Youthfront before starting

If we proceed, the pre-season work you would own:

- Confirm the five cohort seats on the timeline proposed.
- Confirm Mike's attendance at Weeks 1, 6, 12 (these get scheduled first, by Week 0).
- Draft a Safety charter — roughly 1 page — that explicitly names the out-of-scope territories. Movemental helps draft this; Mike signs it.
- Identify the shared document tool (Notion, Google Doc, or internal knowledge base) the season will live in.

Pre-season work totals roughly 4 hours across the exec team, plus 2 hours of Safety charter review with Movemental.

Page 9 — The decision you are actually making

The decision is not *should we try AI this year*. You are already trying it. Staff are using assistants in personal workflows. Vendors are emailing Lisen. The board is asking Tim. The question is whether Youthfront will have a deliberate twelve-week season to form a cohort and build a stance, or whether the next eighteen months will happen without one and the board will eventually have to reverse-engineer a policy onto whatever has already accumulated.

If the decision is yes, the companion tailored proposal and one-pager are ready for Natasha's and Mike's review. If the decision needs more conversation, we would propose a single ninety-minute working session with Natasha, Mike, and Josh — not a sales meeting, a working session — to walk the exemplar and test whether the shape of the engagement matches Youthfront's actual situation. Topher is welcome and useful in that session; the decision, structurally, sits with Mike as CEO and Natasha as day-to-day lead.

Next step: thirty minutes with Natasha to decide whether the working session is warranted, and on what date.

Josh Shepherd

- *07-tailored-proposal.md — signable proposal*
- *08-one-pager.md — board-ready one-page summary*

Sandbox Season Engagement

Movemental × Youthfront — Proposal

Date: 2026-04-18

Proposal valid through: 2026-05-23

Proposed start: 2026-06-01

Proposed end: 2026-08-24 (12 weeks)

1. Parties

Client: Youthfront, Inc., a Kansas-registered 501(c)(3) (Kansas City, MO).

Provider: Josh Shepherd, operating as Movemental.

Primary day-to-day contact: Natasha Nikkel (COO). All scheduling, artifact delivery, and operational questions route through Natasha.

Contracting authority: Mike King (CEO). Signs this agreement and authorizes changes to scope under Section 10.1.

Executive sponsor: Mike King (CEO).

2. Engagement summary

Movemental will run a twelve-week facilitated Sandbox Season with a Youthfront cohort of five staff plus one rotating seat, producing a validated portfolio of AI use cases, a board-ready AI governance one-pager, and a trained internal team capable of running the next season without Movemental. The engagement is the second stage of the Safety–Sandbox–Skills–Solutions framework.

3. Scope

3.1 What Movemental will do

- Facilitate twelve weekly 90-minute working sessions, in person or videoconference, per the session schedule (Section 6).
- Provide the Sandbox Season Playbook templates — season charter, 8-pattern scan worksheet, experiment brief, scoring sheet, ethical & relational flag, portfolio page — for Youthfront's licensed use during and after the season.
- Lead the Senior Sponsor sessions at Weeks 1, 6, and 12 (Mike King's three required sessions).
- Produce a draft AI Governance One-Pager at Week 8 for Mike King's review and Safety Owner sign-off.
- Produce a draft Portfolio One-Pager at Week 12 for the next board meeting agenda.
- Run a single Week 12 handoff meeting with Mike, Topher, and the experiment team to transfer portfolio ownership to Topher.
- Provide a written Season-Two Scope Memo at Week 12 (2 pages) assessing what should move into a next Sandbox season and what should instead graduate into Skills or Solutions-stage work.
- Maintain a shared working document (client-owned) across the season with full artifact archive.

3.2 Cohort composition

Five confirmed seats plus one observer-veto role and one rotating seat:

1. Senior Sponsor: Mike King, CEO — Weeks 1, 6, 12.

2. Portfolio Owner and primary Movemental contact: Natasha Nikkel, COO — all twelve weeks. Natasha already coordinates

Youthfront's cross-departmental AI inventory; Portfolio Owner extends that coordination role into the season's artifacts and carries the portfolio forward after Week 12.

3. Safety Owner: Mike King, CEO — writes flag paragraphs in Weeks 8 and 10; attends as Safety Owner only when flagging (not every week).

4. Experiment Operator: Lisen Tammeus Mann, VP Development & Marketing — all twelve weeks.

5. Experiment Operator: Topher Philgreen, EVP Strategic Initiatives — all twelve weeks. Topher's experiments stay at the operational level (e.g., synthesis and decision-support work adjacent to his roadmap); his executive-level AI strategy and governance work remains outside the sandbox's scope.

6. Observer-Veto: Jim Newberry, VP Ministries — attends Weeks 2, 3, 8, 10, 12. Vetoes any candidate drifting toward formation or youth-facing territory.

7. Rotating Operator seat: One Youthfront staff member drawn from Development or Neighborhood Ministries, rotating every four weeks (Weeks 1–4, 5–8, 9–12).

Movemental's Lead Facilitator (Josh Shepherd) attends all sessions. A Producer from Movemental handles scheduling and document hygiene, coordinating directly with Natasha.

3.3 What is explicitly out of scope

The following are out of scope for this engagement and for any experiment inside this engagement. This list is load-bearing and may not be waived without an executed written change order signed by Mike King:

- Any use case involving Teen Parent Connect participants, data, or programming.
- Any use case involving Arise (juvenile justice) participants, data, or programming.
- Any use case involving camp programming content, curriculum, counselor-facing materials, or camper communications.
- Any use case involving pastoral care, discipleship, or formation writing that bears Youthfront's theological weight.
- Any use case producing donor personalization at a scale that would yield a message indistinguishable from a personal Mike or Lisen communication.
- Any use case producing church partner-facing research or content read by church leaders as a Youthfront communication.
- Tool procurement. Youthfront selects and pays for any AI assistants used during the season, independent of Movemental.
- Implementation engineering into any production Youthfront system.
- Ongoing facilitation past Week 12. Quarterly portfolio refreshes are a separate engagement, priced separately.
- Board presentations or donor meetings. Movemental does not attend Youthfront board meetings or speak to Youthfront donors as part of this engagement.
- Youthfront internal HR, hiring, or personnel decisions that may arise from season findings.

4. Deliverables

At or before the dates below, Movemental delivers to Topher Philgreen (as Portfolio Owner):

· Deliverable · Delivery date

--- · ----- · -----

- 1 · Season Charter (signed by Mike King) · Week 1
- 2 · 8-Pattern Scan — Youthfront candidate list (12–30 candidates) · Week 2
- 3 · Three to four Experiment Briefs, reviewed and approved · Week 3
- 4 · First-cycle scoring sheet (Experiments 1–2) · Week 5
- 5 · Second-cycle scoring sheet (Experiments 1–4) · Week 7
- 6 · Draft AI Governance One-Pager (board-ready) · Week 8
- 7 · Ethical & Relational Flag paragraphs, Round 1 · Week 8
- 8 · Third-cycle scoring (if run) + flag paragraphs Round 2 · Week 10

- 9 · Portfolio page draft (all validated use cases) · Week 11
- 10 · Final Portfolio (Template F), Portfolio One-Pager, Season-Two Scope Memo · Week 12
- 11 · Shared document archive transferred to Youthfront ownership · Week 12

All deliverables are provided in markdown and Google Docs formats at Youthfront's option and delivered to Natasha Nikkel as Portfolio Owner. Deliverables become Youthfront property at delivery.

5. Fees and payment

5.1 Fixed fee

Total fixed fee: \$32,000 USD.

5.2 Payment schedule

Installment · Amount · Trigger · Target date

----- · ----- · ----- · -----

- 1 · \$10,000 · Execution of this agreement · 2026-05-28
- 2 · \$11,000 · Week 6 mid-season review completed · 2026-07-13
- 3 · \$11,000 · Week 12 portfolio handoff completed · 2026-08-24

Invoices issued by Movemental on the trigger date. Net 14 payment terms. All payments via ACH to the account on the Movemental W-9 provided with the signed agreement.

5.3 Expenses

No expenses are billed separately. All facilitation is remote unless Youthfront requests in-person sessions at the Youthfront Kansas City office, in which case travel is billed at actual cost with a \$750 per-trip cap, billed as a separate line item on the next milestone invoice. Movemental proposes running Weeks 1, 6, and 12 in person (three trips) if Youthfront wishes; Weeks 2–5, 7–11 via videoconference.

6. Schedule

6.1 Session calendar

Sessions held weekly, 90 minutes, Tuesday afternoons CT (day/time to be finalized in pre-season call), for twelve consecutive weeks from 2026-06-01 through 2026-08-24.

A one-week pause is built in the week of Independence Day (2026-07-01 through 2026-07-07) if needed. Default: season runs straight through, with that week's session moved to Thursday to preserve cadence.

6.2 Pre-season work (May 2026)

- Week of 2026-05-11: 30-min call with Mike, Topher, Josh — confirm engagement, sign agreement.
- Week of 2026-05-18: 90-min pre-season working session — draft Safety charter, confirm cohort, confirm session day/time, set up shared document.
- Week of 2026-05-25: Session confirmation notes sent to cohort; materials prepared.

6.3 Post-season

No post-season obligations on Movemental's side past Week 12 handoff. If Youthfront wishes to engage a Quarterly Portfolio Refresh (starting Q4 2026), that is priced and scoped separately.

7. Roles and responsibilities

7.1 Youthfront responsibilities

- Confirm cohort attendance as specified in Section 3.2.
- Provide timely access to materials used in experiments (board reports, grant templates, donor correspondence samples), in forms that respect Youthfront's data governance. Movemental will advise on redactions.
- Sign the Season Charter on or before Week 1.
- Pay invoices per Section 5.
- Hold the out-of-scope list (Section 3.3) through the season. Escalate to Mike King if a cohort member proposes a candidate that would cross the line.

7.2 Movemental responsibilities

- Facilitate all twelve sessions as scheduled.
- Provide all templates and playbook materials.
- Produce all deliverables on the dates specified.
- Hold session confidentiality (Section 9).
- Flag any ambiguity in scope in writing within 48 hours of occurrence.

8. Assumptions

This proposal assumes:

- Mike King will attend Weeks 1, 6, 12 in full. If Mike cannot attend any of these three sessions, the session reschedules — no substitution.
- Natasha Nikkel will attend all twelve weeks with no more than two absences. If Natasha must miss a session, she identifies an interim note-taker and reviews the session artifact within 48 hours.
- Topher Philgreen and Lisen Tammeus Mann will each attend all twelve weeks with no more than two absences.
- Youthfront already has, or will procure before Week 1, at least one enterprise-grade AI assistant with a business-tier data agreement (ChatGPT Team, Claude Team, or equivalent). Movemental does not advise on or procure this.
- Youthfront's existing governance structure (CEO + board) is functioning normally through the engagement window. If leadership transition begins during the season, both parties will discuss whether to pause or terminate.
- The engagement runs in English.

9. Confidentiality and data

- All session content, artifacts, and deliverables produced during the season are Youthfront confidential information.

- Movemental will not cite, name, reference, or describe Youthfront in any public marketing, writing, social media, or sales conversation without Mike King's written approval, in perpetuity. Movemental may describe the *methodology* freely (it is already published); Movemental may not describe Youthfront's specific use cases, findings, or organizational details without explicit permission.
- Data touched during experiments respects Youthfront's tier-based data classification. No Youthfront donor PII, minor data, or confidential program data enters any AI assistant during the season without written Safety Owner approval on a per-experiment basis.
- At Week 12, Movemental will delete all Youthfront-provided materials from Movemental's systems, retaining only the final deliverables for contract-record purposes per standard professional services practice.

10. Change, termination, and disputes

10.1 Change orders

Any change to scope (Section 3), deliverables (Section 4), fees (Section 5), or schedule (Section 6) requires a written change order signed by Mike King (Youthfront) and Josh Shepherd (Movemental).

10.2 Termination for convenience

Either party may terminate this engagement with 14 days' written notice. Fees are pro-rated against the session schedule through the termination date. Movemental delivers all completed and in-progress artifacts at the termination date.

10.3 Termination for cause

Either party may terminate immediately for material breach, with written notice describing the breach. Fees due through the notice date are payable within 30 days.

10.4 Disputes

Any dispute first addressed by a 60-minute working call between Mike King (or Natasha Nikkel, at Youthfront's option) and Josh Shepherd within 14 days of dispute notice. If unresolved, venue is Jackson County, Missouri; governing law Missouri.

11. Signatures

This agreement becomes effective upon signature by both parties.

Youthfront × Movemental — Sandbox Season

A twelve-week engagement to build Youthfront's first validated AI use-case portfolio and a board-ready governance stance.

Why now

Revenue is down \$765K year-over-year. ECFA and major donors are asking how you use AI. Staff are already experimenting on their own. Without a deliberate season, the board will reverse-engineer policy onto whatever has accumulated by winter. A twelve-week season gets ahead of that.

What we build together

- A validated portfolio of five to ten AI use cases — scored for time, quality, risk, and repeatability; flagged for authorship, voice, trust, and formation; owned by named staff.
- A board-ready AI governance one-pager signed by Mike and ready for the next board agenda.
- A trained internal cohort (Topher + four) capable of running the next season without Movemental.

Engagement shape

Twelve weeks, 2026-06-01 through 2026-08-24. Five cohort seats plus one observer-veto role and one rotating seat. Weekly 90-minute sessions plus ~3 hours async per participant. Natasha Nikkel (COO) is Portfolio Owner and Movemental's day-to-day contact — she attends every week and carries the portfolio forward after Week 12. Mike King (CEO) attends Weeks 1, 6, 12 as Senior Sponsor and writes the ethical-and-relational flag paragraphs as Safety Owner. Lisen Tammeus Mann and Topher Philgreen run experiments. Jim Newberry attends select weeks as observer-veto on any candidate drifting toward formation or youth-facing territory.

Explicitly out of scope

No Teen Parent Connect, Arise, or camp programming content. No formation or pastoral writing. No donor personalization at scale. No tool procurement. No deployments. No promises about revenue recovery.

Fee

\$32,000 fixed, paid in three milestone installments: \$10K at kickoff (2026-05-28) / \$11K at Week 6 mid-season review / \$11K at Week 12 portfolio handoff.

Follow-on options named upfront, priced separately, entirely optional: quarterly portfolio refresh (\$4.5K/quarter), Skills-stage engagement (16 weeks, \$45K–\$55K) only if Season One warrants it.

What Youthfront commits

Natasha's attendance at twelve sessions as Portfolio Owner. Mike's attendance at three (Weeks 1, 6, 12). Lisen's and Topher's attendance at twelve as Experiment Operators. Cohort seats confirmed by 2026-05-25. Access to real Youthfront materials

(board reports, grant templates, donor correspondence) under a tiered data-classification that Movemental helps draft in pre-season.

What Movemental commits

All twelve facilitated sessions. Full playbook and templates licensed to Youthfront. Weekly artifacts, scoring sheets, and flag paragraphs. Board-ready one-pagers at Week 12. Season-Two Scope Memo.

The honest frame

This engagement does not solve Youthfront's revenue problem. It gives Youthfront an honest, well-governed AI capacity to respond to the revenue problem without compromising what Youthfront is for. Ten to twelve hours a week of Lisen's team time returned to major-donor stewardship. A ninety-minute-a-month lift for Natasha. A board answer Mike can defend in ten minutes. A cohort with formed judgment that makes every subsequent AI decision faster and safer.

Decision needed

By 2026-05-23. Next step is a 30-minute call with Natasha to confirm direction, then a 30-minute signing call with Mike and a 90-minute pre-season working session with the full cohort in the week of May 18. Week 1 begins 2026-06-01.
